Oh, I have......what you fail to realize is you or others may be able
to resolve these conflicts in your localities, but with dx conditions
the way they are, the interference will be coming from areas outside
of your control.
Good Luck on your band....we freebanders have managed to chase some of
our trouble up into your band....

does anyone know of a program for packet i have a PK232MBX i run 3 computers on a network and i put my FT1000MP on my 486 and want to run packet also from it, but don't really want to or have the IRQ's to put an add on com port. is there a prog (Terminal if have to) that will install and run on 1 of my Pentiums and use the com port on it but let me put a short cut on my 486 for it. I run Win95 on all of them. Thanks for any help
Dan

>60's 30%

60-80s weigh 80% of HF code users ?? amazing !! this is a thing
that we are talking about.

> 50's 10%

>40's 5%

>30's 2%

>20's Maybe 3 - 5 QSO's

>Teens 1 QSO

>I am 56. If I am lucky enough to make it to 80+ I may have a hard time
>finding a CW QSO.

we [young guys] just don't care about CW. if you block us out by CW
code, we don't care anything about it (many people do love having
parties instead of practising the code for all day).

> I am afraid the handwriting is on the wall: there is
>little chance of CW surviving.

because no one cares anything about it.

> I just mention this for "geezer" info. (it's
>true) I don't much care about the licensing argument. If you don't know CW
>then you wont be QSOing me anyway. 73 CW OP

I love QSOing young girls/guys on 6m or 2m (where we find each
other)... so good luck on attracting the young people on HF. It
will never happen without removing the code requirement.

many "old foggies" are becoming silent keys (who, of course, impose
the morse code and in charge of the requirement). it will be gone
shortly.

> I have passed the 5 wpm test in Canada only because it is a
>requirement, not by choice. I will do the same with the 12 wpm test.

yeah, I did it for the requirement. I forget anything about CW now.
I have to practise and get 12WPM again. After that, I will forget
anything about CW so what's the reason ??

> I just
>don't approve of choosing cw as a kind of test to see if you are a good ham.

yeah, go to 80m band !! you will hear a bunch of swearings and
musics with call signs !!

When I lived in BC, there were many activities for the emergency
program and for the community based program. More than 80% of the
participants were no-coders. Great... get more no-coders and show
some respects now !!

> It doesn't prove anything except that you can learn it.

yeah, it doesn't prove anything !! it doesn't mean you are a good
ham nor knowledgible ham.

> As for myself, I
> will never use cw because I have no taste for it.

Yes, you are correct there are no relays anymore for that purpose. All switching is done via a transistor. Someone on the NG mentioned the ALC on the front end being abnormally slow for some reason. I agree that would cause this symptom. Maybe some investigation in this area would be in order...

4981. 5A DX-pedition

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-12 00:00:00 UTC
From: franky B <frankyb@glo.be>
Message-ID: <3491B858.2C91@glo.be>
Source record: 184548

I would like to adress this mail to you with the following.
In March 1998 we will go with a team of 3 radio amateurs to Lybia for a DX-pedition.☐
It will be the first YL activation of that country and we will use the special callsign 5A21PA.
The team will be two OM and one YL, ON4CAT Tiny, ON4APS Patrick and ON4CEL Frank.
Since Lybia is totally depended on DX-peditions to provide them with amateur material, I
would like to ask you if there is a possiblity to sponsor our team with any material or
antennas?
We will mention all sponsors on our QSL cards and our web site at http://users.glo.be/~frankyb/5a21pa.html to thank them for the sponsering.
Thanks in advance.
We hope to receive a positieve answer from you and sign

```
Sincerely
The 5A21PA - team

Well, if nothing else, perhaps I kept you folks busy for a few days so you'd have less time to run around with your little DF rigs seeking out 'evil pirates' and turning them in.

Maybe I am immature (BTW, I am quite middle class and nobody ever gave me ANYTHING) but I'll tell you what...you're certainly no better.

In fact, even if I'm totally wrong and misled...at least my heart's in the right place. At least I care about someone other than myself. At least I don't just sit around smugly telling everyone, "That's the way the world is...it sucks... and I'm going to make sure it sucks more for you than it does for me." You'd call me immature even if I weren't.

I've received ALOT of mail messages saying, "Yeah I agree with you but why are you bothering with those guys?" Frankly, they're right. And I've forced you to reveal what you truly are. You're so vile I don't even have a name for you.

So I'm going to prove that I'm the bigger man...and end this thread. You want the last word, here's your chance. You just go ahead and take out all your hatred and self-righteous feelings on me. You may say that I let it go on too long, but so did you. So you just lay into me with all that anger that you've got bottled up inside. Who knows? Maybe you'll get it out of your system enough that your wife, your children or that innocent (gay/lesbian/black/white/asian/buddhist/whatever) will be spared your rage for one evening.

I have the courage to do something you haven't done: Give you the last word.

There is a new ham radio award, the W.A.S.P. [Worked All States
Portable] for those of us who travel.

You can work any state from any location with the USA on any band,
using any mode. QSL cards must indicate that you were portable at the
time.

Cards do not need to be submitted. Photo-copies are fine.
Fee for Certificate is $5.00 plus a 9 x 12 SASE.

W.A.S.P. AWARD
c/o W4SCO
4135 LaVista Rd #610-104

This is another case of Radio Shack doing something right, and catching hell for it. On the VHF/UHF handhelds, the radio is dropping the CTCSS tone before the RF drops out. Thats why you don't hear the squelch tail on the end of a transmission from a RS HT.

In article <348c64c2.8112663@news.demon.co.uk>,
nick@nospam.stonea.demon.co.uk writes
>I think it's already been pointed out to you by more than one
>other person that I never once used the word "Nazi" in any
>message to Walt,

No-one can be in any doubt that it was YOU who introduced the subjects of, "Hitler" and, "...we exterminate the Jews". No-one can be in any doubt that these remarks were intended to be grossly offensive. No-one can be in any doubt that these topics represented a mention of the Nazis. It is pointless for you to argue about words when the whole matter has been stirred up by your deliberate offensive and abusive remarks. I have no axe to grind on this. I freely admit that you did not use the word, "Nazi"; but that was not the point being made. I did not originally say, " " Nazi " ", thereby implying that you had used the literal word. I said that you brought up the Nazi party, which indeed you did, as described above.

For this grossly offensive remark, I chastised you, ON YOUR OWN INVITATION.

>but facts don't seem to matter much in your
>arguments.

More abuse, Nick?

>Are you saying that racial extermination doesn't start with
>racist comments ? How does it start - chain letters ?

>>For someone who blusters about libel, you are on a sticky wicket
>Oooooh, is that a threat, Gareth ?

No. I drew attention to your incongruous behaviour.

>Any remark which singles out people purely on their race (or
>skin colour) IS racist.

> The original words that Walt said WERE
>racist. He has now proved that he hasn't even got the courage
>of his original convictions,

More abuse, Nick?

>>NNN: I'm sure
>>NNN: Demon Internet would be interested to learn that you are posting
>>NNN: untrue comments about me on newsgroups.
>>Rubbish!
>You could soon find out otherwise, Gareth. FACT, not threat.

More threats, Nick?

>>For someone who blusters about libel, you have just made a libelous
>>comment about me!
>So sue me !

I think that you misunderstand sarcasm.

> All you've done is to twist words
>around in an attempt to extricate yourself from the big hole
>which you have dug for yourself with your own teeth.

No. I have merely responded to your invitation to state that
your behaviour is an annoyance. It is YOU who are attempting
to twist the situation to make it appear that I am the
abusive party. Whatever happened to Walt as the target of your abusive
tirade? How easily you seem to have been sidetracked.

>What a limited vocabulary. How old are you - 14 ?

More abuse, Nick?

>>NNN: but I doubt if you are man enough.
>>More abuse, Nick?
>No, an opinion which I think is borne out.

More abuse, Nick?

If you deride others about being, "Man Enough", how about
publishing your name and address, so that I may, at my leisure,
refer the matter of your persistent threatening behaviour to my
solicitor?

>I think you ought to look up the word if you own a dictionary.
>I'm not sure you know what it means.

More abuse, Nick?

>Get a life !

More abuse, Nick?

>>More bluster.
>Where did you pick that word up ? "The Sun" newspaper ?

More abuse, Nick?

>>What are you trying to prove?
>

>240+ entries in this thread and he still doesn't know !
>Well Gareth, it's all about the fact that UK amateur license
>numbers are falling,

Not skilfull enough in twisting. I ask what you are trying to prove
with your persistent abuse.

> probably because people are sick of hearing
>types like you and Walt on AR, so they take up some other
>friendlier and more rewarding hobby.

I think that you will find that both Walt and me are welcoming
to new entrants to the hobby, and we both encourage technical
excellence. The only unfriendliness here seems to be your persistent
abuse.

>>BWAAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAAAA!
>Oh yes, a very mature statement.

Laughter at ridiculous behaviour is neither mature, nor is it immature.

> Have you lost your dummy ?
>Never mind, mummy will fetch it for you....

More abuse, Nick?

This country has never been under a free-market. Nor for that matter has any other economy in the "Free World". The US economy is at the Capitalist end of the spectrum but the fact remains that all major industries got their starts through massive government subsidies. The predominate form of which is military spending.

Pure capitalism if allowed to exist would consume, and thus destroy the US economy with a few weeks. There have been experiments with Lesse Faire. In the late 1800s the UK gave it a try. And within a couple of monthes had British industry begging the UK government to intervene to stop the destruction of the British economy. The depression of the 1930s is an example, in this country, of the same phenomenon. That is why capitalism is such a hopeless system.

Mr Rambo your second sentence goes right to the heart of the matter. The institutional role of all businesses under capitalism is to MAXIMIZE PROFITS and NOTHING ELSE. Leaving nothing but total destruction of all resources. In this case the radio spectrum.

I come up on the boards once and awhile just to see whats going on. I have been a ham for a little less than three years. I have passed the 13 wpm test only because I had too. I have never been able to enjoy CW, although I have tried . IT just isn't for me, but I still do "know" code. Most hams that insist on the code requirment seem to be older fellows that have been in the hobby for awhile. Whether actually said or just implied, they relie on the code rquirment as a filter to keep out "undsirables". I was monitoring 75/80 as late as last night, and I can tell you that some of the conversation was nothing I would want any of my family to hear. In fact, I wouldn't want some of my friends to hear it . either, since they think "hams" are somewhat above sleeze. Unfortuanately, I heard very much the same on 20 meters (14.313) this afternoon. I think some of the advanced class operators need to take a long look at some of their own instead of spending time ranting against "no-code" hams. I'm not optimistic about the hobby. I am growing increasingly frustrated with it and accordingly, spend less and less time on-the-air.

Even though you are recieving "images" in areas outside the disignated cell band, it is still illegal to monitor the conversations. In fact, if someone makes a com;laint about your monitoring, you will be contacted by one of the FBI's finest, who will inform you about the complaint and advise to to stop your activities......the first time.
In essense, the cell lobby has ursurped a portion of the "public" radio spectrum for their own purposes, and have through uninformed legislation placed the burden of their security on the Public-at-large>i.

>"Where's that big 'ol CB RAMBO??"
> "I wanna hear him TALK TOUGH!!"

What good is a cheap 10 meter radio to a licensed amateur if he has to fight off the illegal operators that are starting to populate the band as a direct result of this equipment being offered with no qualifying information? It may legal to sell, but there seems to be no corporate responsibility at work in the sales/marketing effort.

Regarding your previous claim that is says "For Amateur Use Only" in the Copper Electronics Catalog, I refer you to the current catalog that arrived in this week's mail... Volume #27, Issue #11.

Front Page Feature.... New "lowest price" 10 meter radio ("Euro 3900"). The words "Amateur", "Ham", "License Required" or "FCC" do not show up anywhere.

Page 3... same radio, same lack of qualifying information

Page 4.... 8 different models of 10 meter radios (with optional Echo board and Robot Board... whatever that is)... still no mention of any of the important keywords.

Page 5.... 11 models of 10 meter radios and 5 "Tips & Tricks" books on 11 & 10 meter radios. Still not a mention of the keywords. In fact, on this page the term "10 meters" isn't even mentioned, but a few frequency ranges are shown (ie. 28.315 - 28.755 or 28.065 - 28.505).

Regarding these frequency ranges... it isn't the full 10 meter band, or even the correct sub-band, but the chunk of bandwidth that this radio happens to do when changed over from the original 11 meter design. Nothing wrong, just not designed for amateur use originally.

The rest of the 47 page catalog is 11 meter equipment, but there is no mention that the equipment IS 11 meter, or that a new section of the catalog has started.

There is no delineation between these product lines at all. In my opinion the catalog glosses over the differences and tries to blur the distinctions by not mentioning them at all!

Sure it is a free market economy, and I AM a happy customer, having bought several radios and antennas in the past. I simply take exception to the way that 10 meters is being marketed to those who do not have an FCC license (which allows them to legally use the band) or any knowledge that these are not legally used unless you ARE licensed.

No where in this catalog is a book on how to get your license, no explanation of what license is required, etc... I don't see any effort to market this stuff to Amateurs or almost-Amateurs, it is an 11 meter marketing plan, pure & simple.

Again, probably not illegal in any way, but certainly misleading and indirectly promoting the idea that all this 10 meter equipment can be used in the same fashion as the 11 meter equipment by anyone who buys it, in my opinion. This is where the problem STARTS!

IMHO

Larry,

It's a good thing you didn't wish everyone a Happy Thanksgiving. Can
you imagine the uproar that would have caused among all the Turkys???

GASP!!!!!!!!!!!!!!!!!!!!!

I was going to wish everyone a Merry Christmas too, but now I think I'll
just wish a Merry Christmas to everyone who wants to have a Merry
Christmas.

No, I am NOT a Christian. I am an Earthling...(GRIN)

Happy New Year everyone!!!

Unfortunately since the internet became so popular, the troubled hams with bad childhoods have put up their radios and replaced them with keyboards. This gives them the opportunity to spew forth garbage ranging from corrective spelling to how they are a much better person since they have a license. If they were on the air, most of these persons would be ashamed to do the things that they do here on the internet. Would you make fun of a handi-capped ham if they spoke strange on 75 meters? Probably not. But if the same person comes and posts on the Usenet groups, these types can't cut them any slack.

Lighten up guys, when your old, grey, and can't type or spell these young people will eat you alive. You will have taught them well.

>>
>> "Where's that big 'ol CB RAMBO??"
>> "I wanna hear him TALK TOUGH!!"

People are held accountable for situations that they indirectly promote all the time... they don't have to be holding the smoking gun.

Do you consider it NORMAL to offer 2 dozen models of cheap 10 meter mobile radios, many equipped with 2-digit "channel displays" and ECHO MICS??? This isn't normal amateur fare at all. The last time I heard an echo mic on 10-meters was from a freebander! Why is it they seem to be the only place to get these radios? I have never seen one in any other typical amateur outlet or catalog. They are made by a manufacturer famous for 11-meter equipment and unknown in amateur circles.

These appear to be simply a veiled attempt at creating a freeband economy. Look at the Catalog.... 20+ pages of 11-meter radios, toys, accessories and antennas. This establishes them as a primarily 11-meter supplier. However, 10 meter equipment is the only "amateur" gear they carry and this they put right at the FRONT of the catalog. See the emphasis?

It matters little that they are plainly marked as amateur gear...this is probably done for the perception of legality (letter of the law sort of thing). It is the SPIRIT that gets stepped on. Do you notice that they almost never quote information important to amateurs (on the amateur equipment)...no detailed frequency coverage or power output information. Why is that?

The Uniden HR-2510 used to sell like hotcakes, not because it was popular with amateurs, but because it could easily be converted to an 11 meter or freeband radio. I bought several for amateur use myself because they had the best price (probably because of the shear quantity of units that they sold). When the FCC shut THAT radio out

of the U.S. market (and not because Amateurs were abusing them), all of a sudden the tables are turned.... instead of offering amateur equipment that can be converted to 11 meters, they offer 11 meter equipment converted to amateur!

They indirectly promote the problem, how many ways can you look at it? They also sell books and video tapes on modification, conversion and "performance enhancement" on the radios they carry. Again, nothing illegal at all, but it indirectly promotes a mindset or sub-culture.

Perhaps they should adopt a "tag line" like this (with apologies to BSAF):

"We don't promote or cause Freebanding, we just make it easier..."

IMHO

I am 18 and have been a ham for two years. I have found that the ham commutity has, by far, the most friendly people you will ever find. Also, they are normal people with other interests and goals. The posting that flame people, I believe, are not written by hams. In my area, if two people have a small conflict, they work it out in private. Postings which may seem boring and normal are what we post, no flaming, yelling, or any rude behavior. Just normal people talking about a hobby they love.

Is only being a Tech Plus worth then being a General?? Generals know faster code and more theory. This is a hobby which we pick our interests and levels of involvement. I know techs who do more to promote radio then Extras.

In closing, calling a no code tech a loser, wimp, or anything else, is like calling some one who is not an Extra a loser, wimp, cry babying, and everything else.

Hey Greg--Thanks!!
I couldn't find Paintshop Pro, but I did find one called Card Plus 4.2.

I'm having a bit of a time figuring out how to use it--but I've made GREAT progress already and have printed out some good test samples. I think I like this better, designing my own QSL cards. I can also put in different colors and use clip art--great!

Thanks again and 73's
Hank

No problemo. There are even repeaters at or nearby both Disneyland and
Disney World. I've had no problem at both parks.

On the other hand, I wrote here about 3 years ago about the San Diego Zoo's
Wild Animal Park near Escondido giving me a hard time. They thought it was a
CB or something. Of course the guy at the gate was a total ignoramus, but
as long as I had a headphone on the HT nobody complained.

I also have had a Ski Slope in New Mexico (Angel Fire) give me a hard time
too. Ironically when the ski patrol told me to turn off my HT, we were
standing about 50 yards from the repeater site ! I offered to show him my
Federal license, and he skiied off to fry bigger fish.

I am a new radio amateur, living in Haifa, Israel.
My license restricts me to 15 Watt max power, Morse tranceivers only.
I would like to buy such a tranceiver.
When I posted this message some months ago, I received only offers to
sell 100W max power, but I am not allowed to use such a device.

I would like to buy such a device. Please contact me by phone, because I
don't usually subscribe to this group.

>US citizens. Many have to work on December 25th.

Thanks Bill.
Stewart has lost count as to where religion stants in the USA perhaps
because he has been brainwashed by the televangelist that concider the
American constitution anti christ and therefore it ought to be burned.
So far they have been succesfull to convince a lot of naive believers
(that is the idea of beliefes to create manipulative individuals) that
they either run the world or they ought to.
>
>Sending holiday greetings is non-sectarian. Sending Christmas
greetings
>to those who do not believe in Christ, and there are many, could
insult
>them.
>
>: How you celebrate Christmas, or don't, is a personal matter. It is
>: just sad that you choose to celebrate it in such a negative way (by
>: attacking others).
>
>I would prefer to celibrate the holiday without having the merchants
>starting to pander their wares even before Thanksgiving.

Don't be against comerce and doing business and profits.
But the idea of presents ought to be atatched to the individual
receivig the presents not to satisfy the orders (almost) of a religion.
I give you a present because you deserve it, not because it is a

religious day.
On the other hand present giving in a day like christmas reenforces
their beliefes and guess what? It is been blessed.

I have good friends (best friends) who are practicing christians and we
are best friends because of their inteligence to realize that they do
not have to force it down my throat.
The same is true for me I almost never disuss religion or Ariligion
with them. Where are you in this scale Dwight Srewart?
C Thomas

I always practise CW at a speed of not less than 15 WPM.
When I hear 12 WPM, I feel very slow, but that's good because that's
what's on the test.

I have a old Radio Shack "Navaho" base station. This unit supports 40
channels and SSB. Can anyone direct me to information on how to modify
this unit for 10 meter operation? I understand that these conversions
this were fairly popular several years ago

Extremely well said and we should all remember this statement. Some folks like to ride a bicycle around their neighborhoods, others do extreme mountain biking and each will likely receive the same amount of personal satisfaction. As long as we all show basic human courtesies to the next person, it should not matter to what degree we get involved in our hobbies.

Brian, thanks for the reality check.

Hi Carl - I'm beginning to believe you feel we've made an error in
creating all the rec.radio.amateur.* speciality groups. I suppose
you would be very very happy if there was just one r.r.a NG, eh?
We could have the .policy code debate, .antenna arguments, .homebrew
tips, .boatanchor nostalgia, .equipment mods, .DX notices, .space news,
.digital articles - all of that traffice right on .misc! What
would you guess, say a minimum of 500 articles per day?

Heck, let's move down one level and include all the rec.radio.*
groups here, too: .shortwave, .swap, .info, .scanner - one huge
happy family. One to two thousand articles per day right here.
Fun, eh?

Enjoy the weekend, buddy,
Jeff

This Band Is Your Band

(chorus)

This band is your band
This band is not my band
From the HI HI clan
To the blowhard ham
From one sixty nine meters
To the farting repeaters
R F belongs to only you and me

(verses)

As I went scanning through
Through the RF spectrum
I saw the ham's had
Totally wrecked 'em
And, with their meaningless lives shrinking
The ham's start thinking
This band belongs to me and me

So now the hams try to keep
Something they don't own
This time they're picking
At the wrong bone
This piece of spectrum
Belongs to the American Citizen
Ham bands belong to you and me

From: GREGORY T SMITH

Well I tend to agree with you, that WE hams, do tend to talk in "HAMEESSE." I mean alot of people use Q signals on 2m repeaters when they are not nesesar, QSL OM? Anyhow, I think 75% of all ham comunicatin is just about as exciting as watching mold grow. I get tired of hearing people come on and say, "I just put up an 880 element beam, am I any fuller quiting into the repeater than I was with only 800

elements, copy QSL?" Then there are those who just quite haven't figured out repeaters IE: "I'm sorry OM I could barely copy you, but for some reason your 10 over 9 on my radio." Of course he is listning to the output of the repeater! Then come the "Body Count" nets. We have the great ARES net, which is really for training hams in disaters, but all they do is take check ins, then close the net, and BITCH about not getting as many people "Body Count" this week as last week's "Body Count." This serves no use, and ties up the repeater from being used for important comunication, such as KERCHUNING, and guy who say,"I just got this new mic, how do I sound?" This is the comunication is important apparently to eveyone but me.
By the way, I just got a new computer, how does the type look?

Here is what other hams say about me:
Burt

Its obvious to me this guy (smartass) never read any of your posts
on alt.support.divorce. Just like a ham to shoot his mouth off
without having any of the facts.

Burt, I want to say keep up the good work. These "hams" need to
be shaken up as frankly, most of them are losers. I do not call
myself a "ham", I am a radio experimenter. I got my amateur radio
license to allow myself access to radio frequencies.

BTW, my wife (of 8 years) really enjoys your posts making fun of
ham operators. At one time I was involved with the "social" side
of ham radio... so she has seen some of the things you mention.
She was able to reform me and show me the error of my ways.
You should start a comic strip.... lets call it "Hambert".
(Model it after Dilbert to a degree) I'd bet money you could
get one of the ham rags to run it.... or maybe on a web site?

Best Regards,

Jeff

CLOSED CIRCUIT ADVISORY

The following advisory is not for transmission over amateur radio. Once again we are forced to ask our listeners for their financial support.

According to our Support Fund Administrator, we currently have only enough in the bank to keep going through the end of the year. After that, Newsline will again exist on a week to week basis. So please help by contributing what you can, as soon as you can to the Newsline Support Fund. The mailing address is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1061 for release on Friday, December 12th, 1997 to follow.

<*>

The following is a QST

Radio Amateurs of Canada is told it will not get a voice in administering ham radio in that nation and congress investigates the relocation of the FCC. These stories and more on Newsline report number 1061 coming your way right now.

<*>

INDUSTRY CANADA POLL ON CERTIFICATION AND LICENSING

Canada's national ham radio society has been told that it will not be given a voice in governing that nations Amateur Radio service. At a November 28th meeting of Industry Canada's Amateur Delegation Working Group, Radio Amateurs of Canada was told that Industry Canada has decided to terminate a delegation initiative and to retain the administration of the Canadian Amateur Service. No reason was given for the termination but Industry Canada says that it began a commercially administered poll of Canadian radio amateurs on December 1st. This, to obtain views on amateur radio licensing and certification.

Negotiations have been ongoing almost four years on the Delegation of the Administration of the Canadian Amateur Radio Service. Radio Amateurs of Canada says that it is attempting to obtain the details of the poll and will provide them if they are made available. It also says that it will attempt to meet with Industry Canada to find out why the negotiations were terminated.

(Via Radio Amateurs Canada)

<*>

CONGRESS LOOKING INTO FCC MOVE

A plan to relocate the Federal Communications Commission's headquarters is once again under scrutiny. This time by congress after Senator John McCain asks investigative arm to look into whether the FCC should be forced into the move.

The FCC has long resisted the relocation. It wanted to opt out of the move but was ordered by a federal judge in 1994 to relocate to a new complex called the Portals. A business complex where the government has signed a long-term lease.

The disputed move has again caused a stir after it was learned a lead investor in the new office development paid a million dollar legal fee to President Clinton's campaign manager. That was for work that included amending the FCC's lease at the Portals development project. According to Senator McCain, rent in the new space will increase by 27 percent.

(Via published news reports)

<*>

BUSTED PIRATE BROADCASTER IS HAM

One of the three unlicensed broadcasters busted by the government three week ago is a ham. L. Douglas Brewer, better known as Doug Brewer to the Tampa, Florida ham community holds the call sign KC4HAZ. Brewer, a General licensee of Temple Terrace, Florida, was detained when armed agents moved in to close down the pirates and confiscate equipment.

As previously reported, Brewer operated as "The Party Pirate" on 102.1 MHZ from his suburban Tampa home. He told reporters that he was awakened November 19 at 6:30 AM by armed U.S. marshals who handcuffed him. According to news reports, federal agents seized equipment from his home studio and from a remote broadcasting van that carried a "102.1 FM Pirate Radio" logo. They also dismantled his 150 foot tower and trucked it all away as Brewer and other station volunteers looked on.

(Via ARRL, others)

<*>

WEST PHILADELPHIA PIRATE RADIO

A West Philadelphia low power broadcaster has returned to the air in defiance of the Federal Communications Commission. The 20 watt alternative station resumed broadcasting after less than a week off the air. Like Free Radio Berkeley in California, the operators of the Philadelphia station claim that the FCC's expensive licensing process is an unconstitutional violation of free speech rights.

(Via published news reports)

<*>

HACKERS DEMAND N6NHG GO FREE

A computer hacking group calling itself Pants Hagis has broken into the Yahoo World Wide Web site and has demanded the release of imprisoned super hacker Kevin David Mitnick, N6NHG. The attack on Yahoo came on Monday night December 8th. The hackers warn that they will unleash a crippling computer virus if he is not freed.

According to the Associated Press, an on-line ransom note left by Pants Hagis says that the virus is set to go off on Christmas Day, 1998, unless Mitnick was released from jail. But computer security experts are skeptical of the hackers' claim that they had implanted such a virus. Yahoo officials discount any possibility of a virus threat. Meantime, Kevin

David Mitnick, N6NHG, remains in jail and well away from the internet and the world wide web.

(Via published news reports)

<*>

FCC TO REQUIRE WIRELESS CARRIERS TO FORWARD ALL 911 CALLS

If you own a cellular telephone and have not been able to get through to an emergency number like 911, that is all about to change. The FCC has acted to revise its rules which require covered wireless carriers. The new regulations make it mandatory for them to transmit all wireless 911 calls from both subscribers and non-subscribers to emergency assistance providers operating Public Safety Answering Points. The details are contained in Report Number WT 97-43 available at the agencys website at:

www.fcc.gov

(Via FCC)

<*>

FCC SEEKS COMMENTS ON FILING ADDRESSING DIGITAL TV ALLOTMENTS

The Association for Maximum Service Broadcasters, Inc. and other broadcasters have submitted an ex parte filing that presents suggestions for addressing two issues relating to the Table of Allotments for the digital television service. The first of these issues addressed in the November 20th fling deals with DTV to DTV adjacent channel assignments. The second concerns assignments in the most congested areas of the country. Those being the Northeast, Great Lakes region, and California coastal area. Comments are due by December 17th and it is unlikely that this cutoff date will be extended.

(Via press release)

<*>

DIGITAL SIGNATURE BILL OFFERED

A bill has been introduced by two federal lawmakers to require federal agencies to accept computerized personal identification marks known as "digital signatures" as valid signatures on online forms. Aaron Pressman of the Reuter News Service quotes the bill's sponsors, Democratic Representative Anna Eshoo of California and Republican Billy Tauzin of Louisiana as saying the proposal could generate millions of dollars in cost savings.

(Via FCC, ARRL)

<*>

INDIAN POINT PREPAREDNESS DRILL

November 19, 1997 marked the date of the New York State Indian Point drill. According to N2MUG, the outing is a test of Putnam County's emergency preparedness planning in the event of a disaster at one of the nuclear plants. And Amateur Radio is deeply involved in the county's plans.

The scenario of the drill pretended that conditions at the nuclear plant had deteriorated and the county Office of Emergency Management is activated. In turn, hams who are members of the Putnam Emergency and Amateur League that comprise Putnam County RACES are activated. These volunteers staffed the Emergency Operations Center, established a radio link between the Joint News Center and the E.O.C., and established a radio link between the nuclear plant and the E.O.C.

FAR SCHOLARSHIPS FOR '97-'98

The Foundation for Amateur Radio has announced that it plans to administer sixty six scholarships for the academic year 1997-1998 to assist radio amateurs. Hams can compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college, or technical school.

The Foundation is composed of over seventy five local area amateur radio clubs. It fully funds nine of these scholarships with the income from grants and its annual hamfest. The remaining fifty seven are administered by the Foundation without cost to the various donors.

For more information write to the:

Foundation for Amateur Radio Scholarships
6903 Rhode Island Avenue
College Park, Maryland
20740

<*>

STADER RECOVERING

Some names in the news. First is Terry Stader, KA8SCP. He is the ham in charge of the Radio Communications boards on America Online. He reports that he is back home recovering, following open heart surgery to repair a valve problem.

Stader says that he thought he had the flu when he stopped by the local hospital emergency room. But a doctor heard something he did not like and ordered Terry into the hospital. Tests showed that his mitral valve had failed and he underwent corrective surgery on November 10th.

Terry tells Newsline that he is still a bit weak from the ordeal, but is feeling better overall. Get well wishes to:

tstader@aol.com

(Via Newsline)

<*>

AURORA BEACON

And Brandon Anderson, N8UPM says that his 144.278 MHz beacon antenna has been temporarily oriented North for Aurora study. This, until he moves it to its new site at 1800 feet. Brandon adds that he will be adding a yagi pointing North combined with an omni antenna. Currently the N8UPM beacon runs 10 watts and operates 24 hours a day.

(Via VHF Reflector)

<*>

FUELING RUMORS

An interesting rumor has surfaced on the Amsat-UK 80 meter net concerning AMSAT's new Phase 3D ham satellite. It says that the extra strengthening has added so much mass to the satellite that the fuel capacity on-board is no longer sufficient to achieve the intended final orbit.

According to AMSAT Germany's Peter Guelzow, DB2OS, the final orbit is the so-called 16 hour orbit. Peter says that the mass of Phase 3D is currently about 630 kilograms. Others are saying that at this weight, Phase 3D will barely be able to achieve this orbit. However, the exact situation will be known when the parameters for the new launch are in place. If its on a booster that does not have thee ability to handle the current weight, AMSAT might have to find substitutes for some heavy parts.

The Phase 3D assembly team in Orlando is currently investigating the possibility to replace an auxiliary battery a newer Nickel Metal Hydride type. This they say would reduce the overall mass and make it easier to secure the 16 hour orbital period.

(Via AMSAT-NA BBS)

<*>

SHUTTLE AUDIO ON THE HAM BANDS

If you want to hear the latest word from space, tune into the transmissions fro the Goddard Amateur Radio Club in Greenbelt, Maryland. They regularly retransmit space shuttle audio to Amateur Radio operators worldwide.

According to Dan Schultz N8FGV, the club transmits shuttle audio on 3.860, 7.185, 14.295 and occasionally 21.395 and 28.650 MHZ. It also runs a local service on 147.45 MHZ FM in the Greenbelt area. The club is on the air when the Shuttle crew is awake and a volunteer control operator is available to man the station.

The GARC Shuttle Retransmission FAQ can be found at on the web at:

http://garc.gsfc.nasa.gov/www/retransmission/ shuttle_faq.html

(Via GARC)

<*>

DX

In DX, word that VE3BW, will be on the year from the Honduran island of Roatan from February 1st to the 22nd. This, using the call sign VE3BW/HR6. QSL to:

Joe Adams
5 Romko Court
St. Catharines
Ont. Canada
L2N 7A1

And members of Canada's Weyburn Amateur Radio Club located in Saskatchewan will use the CF5 prefix from December 22nd through January 5th to celebrate the 50th anniversary of the Royal Canadian Army Cadet Corps of Weyburn. A commemorative certificate is available by working three CF5 stations. QSL via VE5RMO.

And Tim Totten, N4GN says he is not the QSL manager for TF3IRA. Tim says that the reason for the mix-up might be that TF3IRA is the club call for the Iceland IARU Society. He notes that the TF QSL Bureau just happens to be located in the very same room that his group used for the TF/OH4GN operation. The correct method for QSL'ing TF3IRA is directly to the Call Book address.

(Via various DX sources)

Lastly, the ARRL says that QSL's for space shuttle missions STS-83 and STS-94 have been forwarded to the Bergen Amateur Radio Association in New Jersey. BARA offered to pay for the QSLs and will be handling QSLing responsibilities for these two missions.

(Via ARRL)

<*>

SWL WINTERFEST

It's never to early to mark your calendar and plan your vacation a the 1998 Winter SWL Festival. The event will be held March 12th to the 14th near Philadelphia, Pennsylvania. Preliminary information is available on the world wide web at at:

www.trsc.com/swl_fest.htm

and more will be posted as received.

(Via press release)

<*>

TACO SAVE

And finally, employees at a Poway California Taco Bell are very thankful for two way radio. About 1 a.m. on December 1st, two men in ski masks burst into the fast-food eatery near San Diego and demanded cash. The robbers then they locked the manager and two workers in a walk-in refrigerator. But the criminals never thought to remove the remote ordering radio intercom pack worn by the manager. When a customer showed up at the drive thru speaker minutes later and placed his order, he was answered via the radio intercom and told that the robbery had just occurred. The customer called the Poway Sheriff. A deputy was dispatched to investigate and he freed the employees.

(Via published reports)

5049. Baycom USCC Card and Windows

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-13 00:00:00 UTC
From: guenter.rinke@ifia.fzk.de
Message-ID: <349296bc.3308727@news.rz.uni-karlsruhe.de>
Source record: 184509

Hallo,
I am using a Baycom USCC card for packet radio in an ISA slot.
Together with a TFPCX driver (resident in memory) this works well
under Dos with Packet radio programs as GP for example.
However, under Windows 95 the performance of the PC is degraded,
because of the 16 TFPCX driver windows runs in 16 bit compatibility
modus, but GP runs in a dos window well.

Furthermore until now I did not find a Windows (32 bit) packet radio
program that works together with the TFPCX driver which is necessary
for my USCC card.

Does anyone has a solution or can give me tips?

> greater outputs. Sounds like a no-brainer to me.

General and above are not restricted to 200 watts in the 28.3 to 28.5MHz subband. I just checked the ARRL page to be sure. That limitation only applies in the 80, 40 and 15m novice bands.

It's obvious you haven't heard 10m when it's good. On a weekend you can't find a place for a QSO between 28.3 and 28.5MHz.

Between the number of hams that will be on the band, the high power and the generally good antennas, outbanders don't stand a chance.

Did you you listen on 10m Saturday during the contest? The east coast was 59+ on the west coast.There's quite a bit of activity for a solar flux of only 90. The east coast was 59+ on the west coast. Just wait until it's 190!

-
Here is a summary of news items covered on edition #246 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 19-Dec:
-
1. FCC May Begin Issuing Gate 4 Vanity Call Signs January 7
2. AMSAT-NA Campaigns to Close $270,000 Phase 3D Shortfall
3. New ARRL Section Managers Appointed, ENY SM Declared Elected
4. Industry Canada Ends Administrative Negotiations with RAC
5. Dale Hatfield, W0IFO, Rejoins FCC after 15 Year Hiatus
6. ARRL Announces New Fee Schedule for DXCC and Other Awards
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Special Event Station Calendar
9. "This Week" Fifth Anniversary Special Event Station
10. Spitnik Jr./40/PS2/RS-17 Still Going and Going...
11. AMSAT-NA Schedules Annual "Straight Key Night on OSCAR"
12. Dayton ARA Announces 1998 Scholarship Awards Program
13. "The RAIN Dial-up" from Chicago
14. Weekly Propagation Forecast
15. "Tower Climbing Safety" with Greg Stoddard, KF9MP
16. Different Standards Can Complicate 56K Modem Operation
-
Funding for the program's transmission and production expense was
provided this week by a grant from Jack Halem, KA6DLX, of Willits
Ridge, California, where "This Week in Amateur Radio" is heard
Wednesdays at 7:30 PM in San Bernardino, Riverside, and Orange
Counties on the KA6DLX repeaters on 146.265/446.475 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up in frequency
to 12.031 GHz. Program audio is on the 6.2 MHz analog
subcarrier. A fee has been paid to W0KIE for access to the
satellite uplink.
```

-
On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz.
-
Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

It certainly draws attention to you if that's what you're looking for
but it doesn't enhance your audio if by "enhance" you mean make it more
understandable. Hams use speech processors to enhance their audio.

5060. QSL Card Software

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-13 00:00:00 UTC
From: Crooser <crooser@prodigy.net>
Message-ID: <3492F978.4C747AAF@prodigy.net>
Source record: 184520

Hello:

Is there any QSL card software out there for the home computer and printer? It seems I have received QSL cards that were produced on a home computer and I just thought that was a pretty neat idea. It seemed more personal. If anyone knows of a software, I would appreciate any info. I have searched the web and could find nothing.

Also, can anyone recommend a QSO logging software? Does the QRZ CD have this capability? I read the particulars on their website in regards to their CD, but could not definitely tell whether it was part of their CD or not.

Thanks again folks and 73's
Hank

>"No loss"? You have no way of knowing this to be the case. It would be "no
>loss" for ham radio to lose that attitude.

I work, I have a family, I have vehicles that I mantain myself, I have
many, MANY demands on my time. I also have the time to spend 20-30 minutes a
day once or twice to try to learn CW. My speed in inscreasing, and I'm sure
that I'll be able to take my 13 wpm test at the next local hamfest.
The point of the matter is this: If you want to learn the code, you
WILL find the time and the place to do it. If you want to learn the code, you
WILL find a way to do it. If you're too lazy to learn the code, you WILL find
an excuse not to find the time. If you're not ambitious enough to learn the
code, you WILL find a way not to learn it.
There is a place for no code ham operators. Technician class licenses
allow no-code operators full privileges from 50Mhz up. If you want low-band
access, then sit down spend a few minutes every day and learn CW. It might be
a waste of time (I'm not going to get dragged into the "there's no REASON to
learn CW" argument) and it might not, but it IS the REQUIREMENT. Oh, and
someone starts with the "noone uses CW anymore" whining, you're wrong. I hear
it all the time. I hear LOTS of operators using CW on 80/75, 40, 15, and even
10 meters so don't try to convince me that nobody is using it, 'cause I KNOW
that to be a lie....

I make my own cards with Paintshop Pro 4. It is available on the web.
Search yahoo, it's easy to find. It takes a little time to figure it
out, but when you do, it is a very versatle tool for all sorts of
creative things. I print them on cardstock paper that you can get at
an office supply store. It is a 30 day full function demo to see if
you like it before you buy it.

I propose that Section 97.101(a) of Part 97 might better read
as ... "Amateur operators should be familiar with, and should abide
by, the voluntary band plans that are applicable to the frequency
bands in which they operate."

We need to help protect our fellow hams who operate weak signal
CW/SSB, Satellites, APRS, and ATV from FM encroachment.

There is a good article on this subject in the January 1998
issue of CQ VHF on page 4.

I suggest that everyone who agrees with the above write or send
email to their ARRL Directors before their January meeting.

5070. Re: Distance?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-14 00:00:00 UTC
From: tsum3drac@aol.com
Message-ID: <19971214071001.CAA27965@ladder02.news.aol.com>
Source record: 184335

<< What is the distance of a Ham radio? Could I talk to people overseas?>>

The question sounds simple enough. The answer is not nearly so simple.

"Ham radio" involves many types of technology and many kinds of equipment. Some of them will allow long distance communications under some circumstances.

I will ignore exotic methods of propogation like satellite and moonmounce, and tell you about the more ordinary route; High Frequency (HF), also called shortwave.

There is nowhere on the surface of the earth that can't be reached by HF, but only under favorable conditions. Propogation varies with the time of day, with the sunspot cycle, with the frequency of operation, and some unpredictable factors as well. The antenna you use also has a profound affect.

If one wanted to install a good antenna atop a 100 ft tower (at both ends), and operate full power at the most favorable time of day, on the correct frequency, you could count on fairly reliable communications for a good 6000 miles if not 12,000. Except possibly during the years of a sunspot minimum.

With a poor man's station, using a wire antenna strung between the trees, it takes some luck. You would occasionally make contacts over such distances, but not at will.

Ham radio is a fun hobby, but if it's reliable communications you are looking for, it's hard to beat the telephone.

Regards,

Blake - WB4PLL

True, most CBers think echo is good for DXing. It's not - this myth came
about when contacts were made on short path and long path, hence the
long path audio would arrive slightly after the short path, giving the
illusion of echo on a single path contact.

Yes, the echo effect is definitely detrimental to ones signal intelligibility... at any level. These echo units were designed as a novelty only and to increase profit margin. The owners feel a sense of individuality... and most don't realize they are taking a performance hit by using them.

What are you a masochist? If people did not insist that EVERYONE MUST
do things "the hard way" (as opposed to the smart way) "like they did
in the good olde daze," we wouldn't have the code-test/no-code-test
debate. Then we could all be happy, doing our thing, be it advanced
technical work, chatting on SSB, or even beeping out brains out in some
stupid contest or trying to get another stupid piece of paper to hang
on the wall (that says you heard someone else's callsign and they heard
yours and you both lied about signal reports).

If we get rid of CW testing we will turn ham radio into a vibrant place,
with more participation, more development of new things, and a decent
chance of surviving into the next century ... if those who insist on
remaining stagnated in the past prevail, we will lose our bands and ham
radio will cease to exist before 2025 ... and *I* for one plan on living
that long.

Fine, great, good for you ... IF THAT IS WHAT *YOU* WANT. However, you don't
have to (or have the RIGHT to) impose that view on everyone else ... hell,
you're not even a general class yet and already you've got the attitudes of
an olde farte from the days of tubes ... lighten up a bit, OK? Otherwise
you'll end up a cranky old man long before your time.

> The point of the matter is this: If you want to learn the code, you
> WILL find the time and the place to do it. If you want to learn the code,
you
> WILL find a way to do it.

I would agree that, in most cases at least, if someone *wants* to learn the
code
they can find time to study. There are, however, some people who *cannot*
master
the code at 13wpm with ANY amount of practice. That does not mean that they
could not be good hams, or that they are "stupid" or "lazy ... some people
"can't
carry a tune in a bucket" either ... it doesn't make them bad people.

But the point that you seem to miss entirely is that there are MANY, MANY
people who would make very good hams (some are already far more technically
competent than the vast majority of current hams) WHO SIMPLY FIND MORSE CODE
TO BE ARCHAIC AND BORING AND ARE RELUCTANT TO WASTE HUNDREDS OF HOURS TO
LEARN IT JUST BECAUSE THE OLDE FARTZ SAY THEY MUST.

The point that needs to be driven home is that (Morse Code != Ham Radio)
and that (Ham Radio >>>>> Morse Code) ... those who insist that "the code
makes the ham" and promulgate all the various false "Morse Myth" quasi
religious dogma WRT Morse are *generally* (but not always) amongst the more
technically ignorant, backward, redneck contingent ...

> There is a place for no code ham operators. Technician class licenses
> allow no-code operators full privileges from 50Mhz up.

Right .. "Welcome to the ghetto, please step to the back of the bus, no
you can't drink from THAT water fountain, that one's for the 'special' folk."

> If you want low-band access, then sit down spend a few minutes every day and
> learn CW.

Been there, done that ... and many of those who advocate the elimination of forced Morse testing have passed faster code tests than the one I passed nearly 25 years ago ... I still find it a terrible bore, not worthy of the time, though
many of the more passionate advocates of eliminating the test personally LIKE to USE Morse and operate CW almost exclusively on the air ...

> It might be a waste of time (I'm not going to get dragged into the "there's
> no REASON to learn CW" argument) and it might not, but it IS the REQUIREMENT.

That is EXACTLY what this debate is ALL about ... CHANGING THE REQUIREMENT.

"The requirement" was NOT written in stone with a finger of fire by God. It is simply an antiquated vestige of days gone by that nobody has gotten around to changing ... like laws that exist on the books in many places requiring a man with a red flag to precede any automobile on the city's streets, or laws regarding how/where one may hitch one's horse in town. I suspect that there will be some who will oppose the modification of THOSE rules to fit today's world, too, if/when the subject comes up.

Pro-coders have a nasty habit of forgetting that this is a free and democratic country where the people ALL have the right to understand, debate, and have a say in the laws and rules that govern them ...

>Good, when are you going? Their loss will be our gain.

Maybe the Netherlands is freer in some respects. However, firearms laws
are much more restrictive. Example: A business associate from the
Netherlands was surprised at all the guns and ammunition sales around
here. He is a small-game hunter. He must store his gun at the police
station, sign it in and out, and if one of the clerical folks messes up on
the paperwork, he is held responsible, not the clerk who made the error.
Now, I do think the Dutch are much freer about sex, drugs, and rock 'n'
roll!

SB DX @ WW $OPDX.335
Ohio/Penn DX Bulletin No. 335

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 335
BID: $OPDX.335
December 15, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, KF2O, W3UR & The Daily DX, W4WX/KG4GC, W5SJ, AC6LF, K7AR, N8AC, W8GMH, WB8LFO, K9FD, DL2FAG, JA1OGX, ON4CEL, VK3AKK, VK6APK and QST for the following DX information.

3B9, RODRIGUES ISLAND. "The Daily DX" reports that the Midway Kure DX Foundation (MKDXF) is expected to announce soon details for an upcoming 1998 springtime DXpedition to Rodrigues Island (3B9). This MKDXF 3B9 operation will be a multi-station all-mode, all-band operation. Look for additional information to be announced after December 21st.

4U1UN STATION/QSL TRAGEDY. OPDX InterNet Subscribers will receive an additional bulletin containing a message written by Jerry, WB8LFO, on the happenings of the 4U1UN station and QSLs.

5A21, LIBYA. Another Libyan DXpedition will take place beginning March 2nd and last possibly until March 8th. Operators will be Tiny/ON4CAT (YL), Patrick/ON4APS and Frank/ON4CEL. This will be the first YL operation ever from 5A. The trio will sign 5A21PA, which reportedly stands for the "celebration of the declaration of 'People Authority', and born the first Jamahiriya." Operations will be from the 5A1A HQ station. They will operate on all bands, conditions permitting. Tiny will concentrate on SSB, Patrick will be on RTTY and Frank on SSB/CW. Frank will look for North American stations during their grey-line on 40 and 80 meters, mainly on CW. The QSL manager for this operation is ON4APS, QSL via the bureau or direct to: Piesen Patrick, Koolkerkesteenweg 141, B-8800 Brugge, Belgium. Also, check out the Internet WEB Site: http://users.glo.be/~frankyb/5a21pa.html

9N, NEPAL. By the time you read this, Joe, VK6BFI, and Neil, VK6NE, will be operating from the QTH of Dick, 9N1ARB. Activity will last until December 24th. Their callsigns will be 9N1BFI and 9N1NE. Operation will be SSB only. The primary purpose of this trip is Amateur Radio, so they

shouldn't be too hard to find on the bands. QSL to their home calls.

AH8, AMERICAN SAMOA. The 59(9) DXReport states Lawrence, KS6DV, is now sporting the callsign AH8LG. The only QSNs OPDX could find were on 20 meters. Look around 14190 kHz (+/- 10 kHz) between 0530 and 0600z. QSLs to: L.A. Gandy, P.O. Box 1618, Pago Pago, AS 96799.

BY1, CHINA. Merv, K9FD, and Harold, W0RI, are planning a trip back to BT1QH, and it looks like it will begin on January 14th and last until January 26th. Their goal is primarily a low band operation concentrating on 160 and 80 meters. They have extended their stay to try to take advantage of any propagation. If conditions are poor they will be on 40 to 10 meters. They report that they should have InterNet access from the BY1QH station and will post the E-mail address later. They will keep everyone updated by E-mail on the "Top Band" reflector and also on the "DX" reflector. There will be NO online logs or web page. They are still in need of any help in funding the trip and off-setting the cost of leaving some equipment/gear for the club station. Any amount, no matter how small, is very much appreciated. Merv states, "We would like to thank the Mississippi Valley DX and Contest Club for their sponsorship and funding for this trip. Thanks very much to all who have helped thus far and contributions will be mentioned on the QSOs, also. We will post updates as the day gets close. See you all in the log."

DXCC ANNOUNCES NEW FEE SCHEDULE FOR 1998! In January's QST (page 83), the ARRL DXCC Desk has announced new fees for DXCC, including a $10 fee for an initial DXCC application. This has been FREE for League members. It will also cost more for walk-in card checking at conventions or at League Headquarters. All applicable fees are charged on each application. Applicants must supply return postage or an SASE for any cards or information requests. The new fees go into effect January 1, 1998.

Current Fee	Item	New Fee
FREE	initial application each year, member	$10
$10	additional application, member	$20
$10	initial application, foreign nonmember	$20
$20	additional application, foreign nonmember	$30
$2	convention/HQ walk-in card check	$ 5
10 cents	per additional QSO (*)	15 cents
$10	certificate fee (includes pin)	no charge
$25+shipping	Honor Roll & 5-Band DXCC plaques	$30+shipping(**)
$40+shipping	#1 Honor Roll plaque	$50+shipping(**)

(*) First application prices are for 120 QSOs maximum, and additional application prices are for 100 QSOs maximum. QSOs beyond those limits are charged at this price.
(**) Includes pin

H44, SOLOMONS. Just a reminder! If you were lucky to catch Northern Ohio DX Association (NODXA) members and very good friends Holger, DL7IO,

and Brigit, DL7IQ, as YJ0AIO and YJ0AIQ from Vanuatu this past week, remember to look for them from H44-land. They should be active by the time you read this (after December 16th). Holger will be active again as H44IO and Brigit is hoping to get the H44IQ callsign. Their stay on the Solomons will last only until January 3rd (or possibly the 10th). If they leave the Solomons on January 3rd, they will return to Vanuatu for another week. QSL via DL7VRO.

KH0, SAIPAN ISLAND. A group of JA operators will be active from here December 19-22nd. Their planned activity will be on CW/SSB, 80-10 meters, including 30 meters band. Look for the following: KH0S - QSL via JA1OGX and KH0U - QSL via JA1QNV.

JX, JAN MAYEN. Terje, JX3EX, will be active until next March (or possibly until April). Activity will be on 80-10 meters. This station sometimes shows up on the 14226 DX Net around 1730z. QSLs can be sent to: Terje Berg, 8099, Jan Mayen.

QSL INFO AND NEWS.....
Merv, K9FD, reports to OPDX that he is the manager for BY1QH as of June 1997. He currently has the logs for last week's contest and is answering contest QSLs now. SASE is required. He will continue as BY1QH's manager for sometime.

The Swedish-Cuban T48RCT and T49C DXpedition has concluded with about 14000 QSOs on 160-2 meters which included activity on the WARC bands. Goran, SM0DRD, reports that all cards are now available "On-line" at the SK0UX QSL Server WEB page. Using the "QSLs Online by SK0UX" concept, you may download your cards directly from:
http://ham.te.hik.se/clubs/sk0ux
ADDED NOTE: Under the current DXCC Rules, these electronic QSLs will NOT be acceptable for DXCC credit (Read under Section I. Basic Rules, rule 2). The other QSL routes (for an actual card) is via SK0UX's address: SE-186 91, VALLENTUNA, Sweden, or via the Swedish bureau.

Karl, DL2FAG, has been receiving a couple of QSL requests for the station Z21AV. Karl reports he is >>> NOT <<< the manager of this station. OPDX could not find a QSL Manager. Please check the CBA.

Al, K7AR, reports he heard a rumor that there was some confusion about where to QSL his recent operation as ZF2RA last month. Please QSL ZF2RA via K7AR. If you can't find K7AR in your callbook, please look up his previous call, WA2TMP, which is good back to 1985 in any callbook.

NEW LOG SERVER AVAILABLE. Dave, NO4J, is providing a free service to anyone who wants to make their DXpedition and Contest logs available on-line. With this service, individuals will be able to check and see if their QSOs are in the log. The following logs are available: VP5DX (CQWW); C6AJT (CQWW); and W4ZR (CQWW). All you have to do is go to the following WEB site and enter your callsign:
http://db-sales.com/nfdxa/logs/logs.html

If you are interested in adding your logs, please send your logs to: no4j@pobox.com (Send logs in .RES or .ALL formats). If you have any questions about submitting your logs, contact Dave at "no4j@pobox.com" or Bill, W4WX/KG4GC at "w4wx@bellsouth.net".

Michel, HH2HM, is now the QSL Manager for the following station: UA0FDX, EX2M, HH2PK, T95LGN, BA4TB and T26JC. QSL via: HH2HM Michel, P.O. Box 104, 22650 Ploubalay, France

R1FJZ NEW MANAGER/ADDRESS. QSL route on this is to U3AJ, B.A.Ermilov, B.Serpunovskaya Str 19/37 - 48, 113093 Moscow, Russia.

SO5, WOLIN ISLAND. Berlin's NODXA members and special friends have advised us that they will be activating once again the Polish Island of Wolin (IOTA-132) from March 10th to May 10th (1998). No frequencies or times were given at this time, just that they will be there on these dates and they hope propagation will be good. The operators will be: DK2OE/Mike, DL7IQ/Birgit, DL7IO/Holger, DL7VRO/Fritz, DL7VYL/Gerda, DL7UBA/Roy and DL1YFF/Hans-Juergen. The callsign to be used will be SO5OE/1.

SPECIAL EVENT AND PREFIX. Beginning January 1, 1998, the Geelong Amateur Radio Club in Victoria, Australia, will be celebrating their 50th year of existence. They understand that this may be the only club in VK-land that has been active this long. During the whole year of 1998, they will be using the callsign VI50G (Victor India Fifty Golf). They will be active on all bands as well as in major contests. There will be a special QSL available for this event. QSL via VK3ATL: P O Box 520, Geelong Victoria, 3213 Australia or via the Bureau.

VP2, ANGUILLA. Bill, W5SJ, will be active as VP2ESJ from January 22 through January 26, 1998, for the CQWW CW 160 meter Contest (January 23-25th). QSLs go to the home call, W5SJ.

Subject: 4U1UN Station/QSL Tragedy

"4U1UN Station/QSL Tragedy"

As QSL Manager for 4U1UN in the years from 1992 to April 1997, I have sent out in excess of 110,300 cards. There is no backlog of cards at WB8LFO. All cards that have been received have been answered, if they were in the log.

Obviously, I have not been able to answer cards that I have not received and through investigation concerning outstanding QSLs has shown that most cards not responded to fall into this category--that is to say-- they were never received at WB8LFO or lost on the return route.

Regarding the current QSL situation, from the outset, I was against the idea of splitting up the QSLing for 4U1UN as I thought this would cause confusion. In fact, I was not consulted about this change before hand and the first I knew about any change was when I saw W6TER's posting on the DX reflector. I refer to the decision of the "new management" of 4U1UN to have QSLs for QSOs BEFORE 1 April 97 go to WB8LFO and after 1 April 97 to W6TER. I have made several requests to the "new management" of 4U1UN in order to resolve this problem, but they have not responded. In the meantime, I receive many cards that were sent to W6TER for contacts made before 1 April 97 and they were forwarded to me for reply. W6TER's labels are pasted over the call signs for these cards which makes it difficult to read the call sign of the stations.

Quite indepentent of the QSL question let me suggest that there is a REAL TRAGEDY which has occurred at 4U1UN. The so called, "new mamagement" has permitted the station, which had been very active in emergency work, contests and normal amateur radio activity, to become totally inactive. Since April of 1997, the station has only been on the air approximately

three or four times. As far as I can determine, there was no 4U52UN Anniversary activity at all this year, and the station was not heard in the " CQ Phone or CW WW Contest". Furthermore, it seems that all of the HF Yagi's at the station which had been installed over many years have been taken down!

I have heard reliably, that in December of 1996, the former or old management of the club, principally Dave, K2GM (who was the station manager) and Carmelo, AA2FN along with Gunn, N2ATF, were in so many words "EVICTED" from 4U1UN. K2GM and AA2FN were forced out because they had been carrying out disaster related humanitarian communications at 4U1UN. The "new management", has misled officials of the UN by telling them that the disaster operations carried out by the old management were "illegal". Isn't that Unbelievable ?

I sincerely believe that we, as radio amateurs, should be very concerned about what has happened at 4U1UN, and one recourse would be to petition the UN to restore the completely legal and proper operations that had taken place at the station for so many years. This could be done by writing to the Secretary General of the UN, Mr. Kofi Annan.

In my opinion, 4U1UN is a station that belongs to the world, to all of us, not to a few misguided bureaucrats who could care less about amateur radio. If we are not willing to fight for 4U1UN we deserve what we get.

Jerry, WB8LFO

I took a driver's license, but I never drove a car after that (well I
did one time with rental car), but that's it.

so what are you going to do ?? I have DL for my ID, but it's
useless.

Spew, spew, spew.

The FCC, for one, has stated to hams calling in for advice that
interfering with an unlicensed operator isn't interference.

They're "not there," and thus interference isn't.

And remember, propagation is 2-way.

> prompted me to start this whole argument. please read on.

Okay everybody, my news server has been having fits lately so I have missed most of the messages posted in the last few days. In fact, most still don't show on my server (I read them in Constantine's message).

Constantine, I am not a Christian. In fact, I have not went to church in thirty years (when I was a kid). Therefore it would be impossible for me to have "Christian arrogance."

You, on the other hand, have real problems. Your paranoia causes you to see Christians where they do not exist. Your ignorance of other people does not stop you from making judgements about them. You fanaticism causes you to see only one view of an issue (Christmas = Christians - there can be nothing else from your perspective).

A trip to the mental hospital may be the perfect Christmas gift for you.

As for Christmas greetings, you are not going to stop them. People were exchanging Christmas greetings long before you were born. And they will be doing it long after you are dead. Therefore your whole "argument" serves no purpose other than to irratate, and hassle, other people.

Okay everybody, my news server has been having fits lately so I have missed most of the messages posted in the last few days. In fact, most still don't show on my server (I read them in Constantine's message).

Anyway Bill, if our elected representatives (State and Federal) say Christmas is a holiday, it is a holiday. The fact, that some people have to work on that holiday, does not change the fact that it is a holiday.

Okay everybody, my news server has been having fits lately so I have missed most of the messages posted in the last few days. In fact, most still don't show on my server (I read them in Constantine's message).

As for the comments above, since I am not religious, I would hardly consider myself "brainwashed." But whoever wrote the message above is not telling the truth about televangelist. I have never heard of a single televangelist saying that the constitution is anti-Christ, or that the constitution should be burned.

In fact, this rhetoric is far worse than anything I have ever heard a televangelist say.

Constantine, I hardly think a person posting a message wishing everyone a Merry Christmas is forcing religion down your throat. Nor do I think it is a deep theological discussion worthy of avoidance.

In other words, lighten up. You are making way too much out of a simple holiday greeting.

I didn't get it from Yaesu. There are exactly two stores in town
that sell amateur radio supplies, and *both* of them had a (small) stock
of the shorter FT-50 power buttons. Must be a common thing for people
to replace.

But how often does the FT-50 get turned on by accident? Do these people
use the auto power off feature? If mine does get turned on accidentally,
it turns itself off half an hour later. That would have to happen quite
a few times to kill the battery.

REPLY...

Actually, a radio like was described in the original message ("a low power transmitter which is able to cover a radius of 300 ft"), is not illegal, or a violation of FCC regulations.

In fact, you can buy a device like this in almost any toy store (wireless microphones for broadcast to FM radio receivers). And, with the right antenna, one of these can easily achieve a range greater than 300 feet.

If you want something more sophisticated, try the professional wireless microphones designed for musicians. Some of these use the FM radio frequencies (or can if tuned slightly), and some even offer stereo output (again a better antenna would increase range).

You might also want to get a catalog from Ramsey Electronics (716-924-4560). They offer several low-power radio kits (AM, FM, and FM stereo).

I couldn't agree more. The $150 (used) 2mFM HT is nice, but a $25 kit that
teaches some theory (as opposed to paraphrasing it in HAM-SPEAK) would
breath some life into this hobby.

Somebody sent me a schematic for a simple low power broadcast FM transmitter.
It's so elegent. Two 2222As. I put it into SPICE and have been testing it,
with the idea of altering it for 6 or 2 meters. In the process, I'll learn
more about SPICE _and_ controlling the deviation in FM.

So following this thread hasn't been totally useless.

I don't think that I can stand any more of this rampant idiocy. This poor kid wants to know how to build a low power FM transmitter, and we bombard him/her with legalese and empty threats. What we, as a community of professional amateurs, are passing up is the opportunity to encourage a young (and obviously intelligent) mind to do some scientific and independent thinking.

The design and implementation of a low cost, low power FM broadcast-band transmitter (an undertaking that CAN be kept inside the letter of the law, by the way) is not a simple task... this has been made quite obvious by the number of replies that avoid the question altogether. I have a feeling that amateur radio has (d)evolved from a knowledge base to a toy parade... this feeling is reinforced everytime I go to a hamfest and see twenty gadget booths for every one book booth. By the way, if anyone here knows of a good, technical newsgroup that isn't a glorified swap shop, please let me know. Does anyone even open up the cases on their radios anymore(other than to scrawl their name/call on the inside)?

As for the young man/lady who wanted information on the FM transmitter, please don't be discouraged by those here who would waggle their callsigns so piously in your face. By the time that you complete your project, your working knowledge of RF electronics will greatly overshadow most of theirs. Plenty of them didn't work as hard as they say they did to earn the *privilege* of transmitting (NOT broadcasting)... the book is $14.95 at Radio Shack and can be memorized in a matter of weeks. I wouldn't usually be so hard on the hams (I'm one too...), but the callous attitude they have displayed as of late makes me a little angry.

A good friend of the family got his start in radio broadcasting with a pirate rig that he built himself and ran from his basement when he was just an 8th grader in my parent's sunday school class. A local radio station scooped him up soon afterward, and now he is a *very* successful regional operations manager for a large broadcasting company.

If you would like more info on building a LEGAL fm transmitter, go ahead and e-mail me. If you want to tell me how much Amsterdam sucks because you have to keep your gun at the police station and read all the paperwork, keep it to yourself. And if you think that someone counts as a blue collar millionaire because he owns property, do *NOT* admit it to the world. That blue collar millionaire could quit that blue collar job and still be a millionaire, you idiot.

To anyone who shares my admittedly liberal opinion, I apologize for any generalizations I may have issued.

Let's just get down to the TRUTH!!
"Christmas" was instituted by the pope centuries ago, to try to get people to stop celebrating the pagan holiday of Winter Solstice. Most of the "traditions" of "Christmas" can be traced back to pagan roots.
The "Christmas" tree is clearly a Druid symbol, the "Old man of the North" was a nordic symbol, we know him as "Saint Nick" or "Santa Claus". His Reindeer (all male) are a nordic fertility symbol. The bright green and red colors represent rebirth of the forests (green) and a woman's (mother earth) menstual cycle (red) again, fertility symbols. The pagans believe that now as the days get longer, the earth has been impregnated and will give a "rebirth" of all that is good in the spring.
So celebrate your "Christian" holiday, but fill your house with pagan symbols to promote equality

REPLY...

And your point is? You're talking about events which occurred, as you said, centuries ago. What relevance do these events, or meanings, have today?

Today, the Christmas tree is merely a place to put toys under. Santa Claus is a guy that lives in the North Pole and brings gifts to the kids. One of his fantasy reindeer has a nose that glows. And the colors are used because those are simply "Christmas colors."

Christians obviously place a deeper importance on Christmas. They view it as an "official" day to recognize the birth of Christ. And, as far as I am concerned, they are perfectly free to view Christmas that way (no matter HOW it came to be viewed that way).

And, if you would have read my previous messages, you would know that I am not a Christian, therefore it is not my "Christian" holiday. I have only defended the use of "Merry Christmas" as a holiday greeting in this thread.

Hi Dave, it has all the characteristics of a religion based on
nothing but faith and faith is not a tool of knowledge. To
paraphrase: Faith is for children, weaving daydreams.

Actually, I have more trust in CW than the average pro-code-test
folk. I believe it has merit and can stand on its own merits. I
do not believe it needs or deserves a federal subsidy.

5130. NEW: UBA 50 Award

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-15 00:00:00 UTC
From: Egbert Hertsen <egbert.hertsen@pandora.be>
Message-ID: <3495AC28.3A27@pandora.be>
Source record: 184395

In 1998 the UBA will celebrate its 50th anniversary.

The HF Commission wants to mark this occasion in a suitable manner
and is doing so with a multi-coloured award.
The aim is to contact as many Belgian stations as you can during 1998.
UBA club stations will use the special ON50 prefix during the
entire year.

The award is available to all radio-amateurs and short wave listeners
as follows:
All contacts (SWL reports) during 1998. No mode or band restrictions.
Applications should be made with a logbook extract.
Same conditions apply to Licensed amateurs and SWL.
To be eligible for the award a total of 50 points are required.

Points are obtained as follows:

every contact with an ON-station is worth 1 point.
every contact with an OT8 (UBA contest station) is worth 2 points (*).
every contact with an UBA Club station (ON50xxx) is worth 4 points
(**).
Each station may be worked once on each of the different amateur bands
including VHF/UHF,...

The application should be send to the UBA HF Award-manager no later than
the
1st of July 1999 at the following address:
Danny Commeyne - ON4ON
UBA HF Manager
Rozenlaan 38
B-8890 Dadizele
Belgium
Cost: BEF 200, DEM 10 of US $ 5. The award is free for UBA members.

(*) The following OT8 stations are valid:
OT8A -B -C -D -E -G -H -K -L -M -N -O -P -Q -R -T en U.
(**) The different UBA section club stations may use ON50 followed by
their letter abbrevation of their section name (for example
ON50MCL).
In addition also: ON50UBA and ON50YLC.

Good luck.

My two cents worth! Simply go to "Best Buy", purchace a simple
FM stereo transmitter that is intended for use with a CD player to
tramsmit into your own car radio. These cost $20-30, and are simple
and cheap enough for anyone. Now learn more about it, and educate
yourself by solving the problems you encounter.

The advice from the posting above is sound. Always listen to cool-
headed reasoning IF any is offered. And go ahead and work on getting
your Amateur radio Operators License. With an inquiring mind and the
willingness to experiment, you can not help but acquire knowledge that
will bring you to the forefront of any field you wish to pursue.

<<Why do I need a ham radio when I have internet access? I can communicate with people over short and long distances with my computer.>>

You don't. And ham radio doesn't need you. Ham radio is a hobby for people interested in radio communications, and who want practical experience building, maintaining and operating radio equipment. It is not a communications service.

If you aren't interested in ham radio, stick to your telephone.

5138. 911 Test

Source record: 184404

Ok, here's one for the crowd arguing over resistive loads.
All user manuals and antenna books state " when checking swr, use a low power setting on the transmitter."
WHY????????
is the power output a factor that effects swr ???? if not,then its a safe assumption that the only reason for a low setting is for "safety". in the event of a real bad reading, your finals won't cook.

However, I have asked 3 socalled "radio techs" and 2 have told me the power does effect it, given line loss, signal reflections, and other things said i cant remember.
and if power does effect swr, does that mean that the radio should only be run at a low power setting most of the time.

AND, what about a rf amp. what effects does this have on a swr when you run it at its full cycle.

I"M seriously asking this for my own info, SO PLEASE, NO SMARTASS COMMENTS

REPLY...

My local emergency operators say it is okay to dial "911" when
programming a phone.

They recommend that you don't call during busy times (the rush hours,
or early evening), and that you stay on the phone long enough to quickly
explain what you are doing (don't just hang up).

If you have any doubts, call the "911" dispatch non-emergency number
and simply ask for their recommendations.

Ham radio is about RADIO communications. It's about building
antennas, transmitters, recievers. It's about learning electronics and
even computers. Digital communications in several forms. Satellites,
MIR and the Space Shuttle. The Internet is a medium that can allow
you to learn about ham radio or any other hobby you may have. The
internet in and of itself is not really an interesting hobby, but is
simply a tool you can use to further your enjoyment of your hobbys.
After all, the internet is just the telephone.

In an amp not equipped with fold-back protection, high SWR can damage the amp (or not) depending on the phase of the reflections. Power does not affect SWR unless heating changes the impedance somewhere or higher voltages cause arcing. If one sees a creeping SWR under stable weather conditions, something is probably getting hot somewhere.

safe
>assumption that the only reason for a low setting is for "safety". in
the
>event of a real bad reading, your finals won't cook.
>
The level of the power does not affect the SWR. The SWR is determined by the matching of the antenna system (feedline, antenna,) to the impedance of the output of the transmitter.

The reason you want to use low power is to prevent damage to the finals of your transmitter. Most modern transmitters have automatic protection features which lower the transmitter output power in the event of a mismatch. However, it doesn't hurt to reduce your power when tuning an antenna circuit.

So basically, if your transmitter puts out 10 watts of power and 5 watts are reflected back, if you applied 100 watts to the same antenna system you would get 50 watts back.

REPLY...

Perhaps they feel it is not your job to correct them. Where does it say in the FCC regulations that new operators have to comply with the operating standards of CW-Man?

And perhaps they feel it is not your job to teach them. When did the FCC issue your teaching credentials, and where does it say they have to sit in your classroom?

As long as people obey FCC regulations, how they conduct themselves on the air is absolutely none of your business. In fact, only a very pompous, and pretentious, person would try to make it his business.

On air customs, such as not using the 10 codes, is just that - a custom. It is not a rule that people have to comply with.

From: lar01@sprynet.com
Message-ID: <3495b65e.2345644@news.sprynet.com>
Source record: 184417

I wonder how many ham would use cw 'if' it could be copied as
efficiently as ascii, eg by machine. I know there machines which do
copy but this still have to be flexible for the human transmitter.
I think that cw would be more popular if it could be efficiently
decoded by machine.
Ascii has a hard time on hf because of the noise problem. We don't
use fm on hf because of it bandwidth.
My observation

Larry Morgan AG5Z advised me that his mother, Dena Morgan W5DRI became a silent key on November 30, 1997. Dena and her then OM W5DQK (Shelton) both of Brookhaven, Mississippi were premier contest and DX operators.

Dena was very active in YL operating events, winning the YL/OM phone several times between 1957 and 1964 . She also participated in the ARRL SS and Dx contests, winning several certificates. Dena never ran over 100 watts with a BW transmitter and Collins 75A3 receiver. Antennas were dipoles fo 40 and 75 and a set of Telrex 2el beams for 10, 15, and 20 in a mini christmas tree array. She had been inactive for a number of years before her death.

Old timers will remember her potent YL signal and the rare Mississippi YL multiplier she passed out.

Cecil, I have stated repeatly in almost all my post that I consider CW as a valuable mode of operation and that I hope it will continue to be used for many years to come. If a person wants to use it, fine! I just oppose its use to restrict access to the frequencies below 30Mhz. I know many fine code operators, General class and above who support this position. I can not understand the pro coders insistance that we are merely a very vocal minority, when the ARRL has allocated so much time and manpower to fight the no code test movement. Seems to me they must be worried or they would merely ignore us. If you want to see what I'm talking about go to the IARU website and read their new 3rd discussion paper just released at the urging of The ARRL.. I'm a firm believer based on what I've read and heard on the bands that the ARRL is facing a lot of oposition at WRC 99, but I may be wrong after all I haven't yet passed my CW test and became a true Ham operator.

This is an observation that I find interesting, and is something that I"ve noticed, too. These new guys wanted to be hams, but they don't want to * become* hams. I attribute it to the elitist attitude of the illegal freebanders, now new "hams." They were so sure that they were king of the hill before that they can't imagine that it is done another way on ham radio. So they want to exchange their "personal" on 10m, or give you "73rds", or any of alot of other cb/freebander lingo. It gets complicated, to, as some of these guys have moved up the ham radio ladder. They have advanced beyond their experience. It's embarrassing to hear some of the stupid things said by new extras, advanced, and generals. In my area I now get trashed on 20m cw by an extra who used to trash me on 10m, but then he was using his TS-940 in the freeband. He complains about his low QSL return rate, but from listening to him operate I'm not surprised. If a DX station responses to any 0 in a pile-up, he calls and exchanges reports as if it was him!
On the subject of lingo, check out my old post on the "New Ham Lingo." QSL?

Welcome to sunny Florida, Daniel. I'm sure that a local will supply the information you requested. I'd just like to remind you, if you plan to operate while in Florida(on any place Stateside while enroute) that the U.S. band segments are different here. The lower 'phone limit on 10m here is 28.3MHz; on 20m its 14.150MHz; and on 40m its 7.150MHz. These are the bands where I most frequently here W4/VE- - - - stations operating outside U.S allocations.

73,

Here is an interesting difference of opinion based on the same observed set of facts (you do actually GET QST don't you?). What I see is a subtle re-education program being conducted in the "Letters" section. Most of the letters getting published are either in support of "slow code" or "no-code." And this is the direction that the League is gently leading a reluctant membership. The reason they are leading gently is because of a study the League did a few years ago, to help them plot their path as a membership-responsive organisation. What they found is that the League's membership is made up mostly of older folks who hold a general or above license. And most of the members support keeping the code requirement. Clearly they can't fly in the face of the dues-paying body. They also noted that the no-code tech. group did not join the League because they did nor regard ham radio in the traditional hobby/ avocation light. Rather, the license was a means to an end, and that end was/ is communication above and beyond any technical curiosity. They basically want to keep in touch with their buddies around town, and to call mamma on the 2m "food patch."

There was a lot of talk about these radio's when they first came out, are they anygood, can you get any range out of them,. Well, I just received mine this weekend I thought I would share my views with you.

To summarize, its a good radio. It has most features I could want, except a DTMF keypad, backlit keys (does have a backlit screen), and the killer, an external antenna jack. The lower part of the antenna is nice finished black metal, but the part that extends up is plain steel (or something) so hooking a clip lead on to that part and then on to the center of my coax works pretty good. It would be hard in mobile installations. I was supprised that I could get many repeaters from my living room. 340mw seems enough to do the job most of the time. And for close simplex work, the low power 50mw option will save battery life. With an external 5.5v DC it will put out 450mw. The flip up antenna feels a little loose when flipping up and down. But it also has a nice feel to it. The radio itself is VERY small. It really is just a little larger than a pager. Its runs off 3 AA's. This radio has no squelch control, and it doesn't need one. It has a monitor button on the side just under PTT if you want to hear static. I preformed the extended RX/TX mod and now I can receive NOAA weather broadcasts. Just becarefull with that soldiering iron, there's not much room in there. The resistor you have to remove is the size of a piece of dirt. For those who have not seen the radio, you can at: http://www.alinco.com/Products/DJ-S11T.shtml Well, that all I have. Thanks for reading.

Daniel,

We only have two amateur radio stores in the Ft Lauderdale area,
unless you want to drive down to Miami.

The two in the Ft Lauderdale area are, in alphabetical order, Eli's
Amateur Radio and the other is Mike's Electronics.

Mike's Electronics is at 1001 NW 52 Street, which is off of Commercial
Avenue just west of I 95. The telephone number is (954) 491-7110

Eli's Amateur Radio is at 2513 SW 9th Avenue, and the telephone number
is (954) 525-0103. Eli's is located south of route 84 and west of
Federal Highway. It is East of I 95.

You can call the stores for directions. Neither store is very big. If
you visit them you will have an idea of what we have available to us
here in the Ft Lauderdale area.

Just thought I would let you know that most 100 watt tranceivers can have
power reduced to less then 15 watts. I typically run 9 watts with my 100
watt tranceiver.
Don't know if that will help you but good luck.

I agree....

I have never heard an echo that sounded better than the same radio with
the correct mike and the echo removed.

The problem is on many of the export radios, the mod level has been set
for the 'echoed' voice, and when they turn the echo off they sound
whimpy. I believe much of it has to do with the audio bandpass filter
which is an integral part of most echo units....

SGC, Bellevue, WA makes a very nice amp. You can find them at:
http://www.sgcworld.com . And TenTec, of Sevierville, TN.They have a web
address also:http://www.tentec.com . Lastly, there is Ameritron(er, MFJ now),
in Starkville, MS. Find them on the web at http://www.amertron.com . There may
be others, but these are the regular advertisers in QST.

You don't need ham radio. It is only a HOBBY--for pure enjoyment.

You don't need a computer or an internet account either. If you want news, watch your television set. Why a television set? Buy a newspaper, read books, go outside and breathe some fresh air. If you want to communicate, use your telephone. Why a telephone? Send a letter. Why do you need a car? Use public transportation. Why do people bake bread at home? It's much easier and cheaper to buy bread at the store. Why play poker with your friends? You can do that with computer software. We can go on and on....

I assume your question/post was well-intentioned; but I think sometimes thinking too much brings out silly thoughts and musings. :))

I do not mean to "rain on your parade", Jim. But you had better tack a "1997" year onto that Christmas.

In one of the earliest and most classic things on the Internet (and probably extending to elsewhere) was the Craig Shergold similar appeal. 13 years later the hospital was still getting inundated with cards.

Your motive may be the best, but I respectfully submit that maybe this is a kind of appeal that should not be posted. (Admittedly it starts to pale besides the deliberate type of spamming most of us have been subjected to lately.)

How well will your computer communicate when your phone lines are knocked out by a storm - or your internet provider has a system crash? Ham radio - especially HF - can be made independent of any infrastructure.

I've been a good boy this year and Santa is bringing gifts from the candy store.

I am looking at the Timewave DSP599zx and am wondering if a DSP really makes that much difference. For CW work, I can usually hear the signal I want with my 250 Hz filter although there is some ringing. On SSB, after a couple of tries I can usually hear the signal I am looking for with the notch and IF Shift/PBT. So what I "think" I really want is something that will help with SSB adjacent signals, static (man made and lighting crashes) and those pesky AM stations on 40m.

Any comments are appreciated

REPLY...

Hello Nancy. I have played around with all the programs you mentioned, and all of them work just fine with System 7.5.5. What this suggests to me is that you are using an older version of System 7, with the old sound manager.

With System 7.5.2 (I think) Apple came out with a new method of handling sound on the Macintosh. A few older programs are not compatible with the new sound driver, and many newer programs are not compatible with the old sound driver.

At one time, Apple made the new sound manager software available free at their web site, but I cannot say for sure if it is still there. But, since you seem to need it, by all means check to see if it is.

If it is not, you'll have to find another source of the sound manager. Perhaps you have a friend with a newer operating system version. Or perhaps a local dealer will let you copy it.

If you have no success at this, there is only one other choice. Look around the internet for the old Novice, or Technician, license tutor (I think you want version 6). Anyway, these contain a fairly good morse tutor that is compatible with the old sound manager.

Good luck with your quest.

Are you in a position to get the seller to demo? I had TimeWave II and was disappointed in what it could and could not do. In the end, after a weekend's use, I took it back to HRO and paid the restocking fee to be done with it. Specifically, it also rings when the filtering is narrow, and it did not help perceptably with qrn. The notch filter on the rig was as good, and while I cannot notch multiple hetrodynes, it is a feature I've not missed.

Good luck, and good shopping.

What this code no code debate boils down to is that those infavor of dropping code would like instant gratification on the hf bands. Kind of like being handed to you on a silver platter. I have a feeling that the work ethic of the vast majority of those that whine about the code requirement is quite low. The old addage the squeeky wheel gets the grease comes to mind. Don't get me wrong folks, I to started out as a cb'er then a no code tech. I thought I couldn't learn the code, I just didn't have the right tapes and more so I had a defeatest additude.... I can't. Well I did learn the code. It wasn't as hard as I thought. I even enjoyed the learning process, I went from tech plus to extra in 11 months and had fun doing it along the way. For those of you that need something more concrete for your argument lets talk about band width and power.
The width of an average cw signal is about half the width of the average ssb signal. Why do you think the FCC has put the power limits at 1500 watts for voice and 1000 watts for cw? Because voice requires more band width? Maybe because cw is a more concentrated signal therefore it requires less power to communicate the same distance. Have you ever heard the splatter from an over driven amp on voice? Better yet, have you ever heard an overdriven amp on cw?
The sun spots are on the increase which means 6 meter opening will be on the increase. If the no codes what to work some dx, do it on the vhf bands. Anyone can work dx on the hf bands but dx on vhf theres a challenge, if you don't wnat to learn code.... good luck on finding out what the beacons are telling you about propagation.

IMHO, DSP is great, but if CW is what your interested in, a good CW filter is better. In general all IF level filtering and signal processing is better than audio processing for numerous reasons.

However, the audio DSP boxes do a wonderful job of killing the AM birdies on 40 meters if your working SSB. Again, since it is audio level DSP and not IF, your reciever will still suffer from reduced sensitivity, but you will be able to pull signals out of the crud.

Hi All,

I am developing a virtual "wall of carts" system for Windows for release in early January. I want some ideas about what features are needed or wanted in a system like this.

The basic premise of the system is an easy-to-use interface allowing you to play many waves using very few mouse and keyboard clicks. The program easily supports lists that can be loaded very quickly. This is great for fast-paced live broadcasts where the dj needs to drop in quick sound effects and even longer items such as beds, liners, bumpers, and other elements (even full compressed songs!).

I am interested in what features that would be essential in a system like this. What killer features would you want? Email is preferred but posting to here is fine as well.

Thanks and have a great day!

I love the built in DSP on my TS570D. Nicer if it were in the IF, but still very good. The noise reduction features work good once you get used to the funny sound. The beat cancel works well for AM heterodyne interference, too. Don't know about the Timewave, but I would be really sorry to go back to a rig that doesn't have DSP.

Another nice feature on the 570 is the DSP works on your transmit audio, too. I get so many people tell me what good audio I have on the air (when I'm not working RTTY). Never used to happen.

5201. Digest of Articles - QST Nov 97 (Long, 32k)

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-17 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <678euf$6h1@news1.infinet.com>
Source record: 184277
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the November, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A MMIC Preamp for "DC to Daylight"
Author>Parmley, William A. - KR8L
Source>QST Nov 97, pp. 32-34
Abstract>Construct an untuned receiving preamplifier for frequencies up to 2-gHz. containing an MMIC plus a few other components. Provides a noise figure of 3-dB.

Digest>Among the most useful integrated circuit chips now being offered are monolithic microwave integrated circuits (MMICs). This article

describes the construction of a general-purpose receiving preamplifier built around a MAR-6 MMIC built by Mini-Circuits Labs.

Since practically all components of the active circuit are etched onto the silicon chip, fewer than a half-dozen additional components are needed to make the amplifier. The author has designed it for use especially in the UHF and microwave bands for satellite operations.

The circuit is built on a small piece of double-sided PC-board, and construction is simple and straightforward. The pattern of conductors on the board is so simple that it can be made by cutting the foil on the component side with a hobby knife and lifting the unwanted foil while heating it with a soldering iron. But if the builder prefers, it could be etched in the normal way.

The noise figure of the amplifier is about 3-dB., which is far from optimum. However, the author plans to use it in satellite operations and the downlink signals of the existing "birds" are amply strong so that the noise is not a problem.

No kit of parts is offered.

Title>TA2:A Low-Budget, Rotatable 17 Meter Loop
Author>Hawkins, Howard - WB8IGU
Source>QST Nov 97, p. 35
Abstract>Build a full-wavelength shielded loop antenna at very low cost.

Digest>A circular loop antenna with a full-wavelength circumference erected in a vertical plane makes an excellent antenna. It radiates in a figure-8 pattern with the main lobes perpendicular to the plane of the antenna and with deep nulls in line with it.

WB8IGU describes such an antenna that he built for use on the 17-meter band. He has suspended it on a rope from a tree branch, and orients it in the desired direction manually. The article does not state how he holds it in place.

The loop was constructed using a piece of scrap 3/4-inch (1.9-cm.) aluminum hard line that he obtained, free, from a local TV cable company. To hold it in a roughly circular shape, he attached a bamboo spreader horizontally across the diameter of the circle. To form the shape across the top of the loop, he enclosed the hard line in a ten-foot (3-m.) length of 1- inch (2.54-cm.) PVC pipe and pulled the ends downward with cords attached to the center spreader, forming an approximation of the top of a circle. The ends of the conductor are placed at the bottom of the loop, insulated from each other. The antenna is fed at the bottom by 50-ohm feedline through a quarter-wavelength matching transformer made of RG-59 coax 8.67-feet (2.643-m.) long.

In order to make the loop resonant at 18.150-mHz., he cut the conductor to a total length of 53-feet (16.15-m.) If it were made of wire, it

would have to be somewhat longer.

Although the bottom of the author's antenna is only some 5-feet (1.5-m.) above ground, he has worked more than 250 countries using 100-watts output power.

Title>TA3:Audio Preamp with AGC and Feedback to Improve AM Fidelity
Author>Burger, John Robert - WB6VMI
Source>QST Nov 97, pp. 36-37
Abstract>Build an audio preamp for use with an AM transmitter. Provides compression for greater signal effectiveness, plus high fidelity audio.

Digest>WB6VMI is one of a number of hams who specialize in operating amplitude-modulated (AM) rigs, most of which are antiques from the vacuum tube era. He operates a transmitter built in 1938 having about 300-watts output. In order to combine high-fidelity audio with audio compression, he has built a preamplifier with automatic gain control (AGC), and negative feedback. AGC works like automatic level control in modern transmitters, in that it prevents over-modulation that would result in distortion. However, it differs from ALC in that it not only reduces the amplitude of loud sounds but also amplifies soft sounds; i.e. it acts as a compressor.

The circuit of the preamp uses three op amps and a JFET transistor. Construction is straightforward but the author warns that a builder may need an audio signal generator and an oscilloscope to debug the circuit.

No parts kit nor PC-board layout is offered.

Title>TA4:Sporadic E -- A Mystery Solved? - Part 2
Author>Whitehead, Dr. David
Source>QST Nov 97, pp. 38-42
Abstract>Describes different reactions occurring in the upper atmosphere that cause Sporadic E ionization in the E layer in mid-latitudes.

Digest>In this second installment of his article about sporadic E, Dr. Whitehead concentrates on the various theories of mid-latitude sporadic E ionization, the type that is most familiar to radio amateurs. Its unpredictability and the dramatic effects when it occurs are intriguing for many.

As a result of many studies and scientific experiments, much is known about the subject but a good bit remains unknown. The author describes a compression mechanism that occurs in the atmosphere when the wind at one level is blowing from the east while, at a different level, it is blowing from the west. It can be shown that this can cause a concentration of ions into relatively thin sheets.

The effect is enhanced when metallic ions are present in the air, notably iron and magnesium. They are almost certainly deposited in the

upper atmosphere by falling meteorites that burn up due to air friction. Both of these effects can explain the presence of ion clouds, but nothing known can explain two other characteristics of mid-latitude sporadic E: why the clouds become so common and intense at certain times of the year and not at others; and why they are most common and intense over southeast Asia and hardly ever appear in some other areas of the world.

Title>TA5:A Packable Antenna for 80 Through 2 Meters
Author>Kennedy, Dennis - N8GGI
Source>QST Nov 97, pp. 43-44
Abstract>Describes a portable antenna that covers from 80- to 2-meter bands. Easy to carry, easy to set up and easy to take down.

Digest>N8GGI travels a good deal for both business and pleasure. He likes to carry a transceiver with him and operate all the ham bands away from home. Modern transceivers and switching power supplies give him the mobility that he needs, but antennas remained a problem. How he solved the antenna problem is described in his article.

He wanted a versatile set of antennas that would allow him to operate on any of the HF bands plus 6- and 2-meters. He decided to use a Hustler vertical whip comprised of interchangeable masts topped with individual mobile resonators for each band. The mast for all HF bands plus 6-meters must be 54-inches (1.37-m.) long, while that for 2-meters is 19.13-inches (48.6-cm.) For easy portability, he made the longer mast from two pieces of half-inch (12.7-mm.) diameter aluminum tubing, each 26.44-inches (67.2-cm.) long. In use, they are coupled end-to-end by threaded rods inserted in each, held together by a coupling nut.

For maximum versatility of mounting, he purchased a Hustler MBM magnet mount and also a Radio Shack No. 21-937 mount. The latter works well on small horizontal pipe rails, like those found on boats. It can also be attached to a wooden deck or railing with a small C-clamp or wood screws.

To provide for ground radials, he cut a piece of sheet steel 8-inches in diameter, drilled holes around the periphery and inserted bolts and nuts with which to attach radial wires. Finally, he made a carrying case for the rods and resonators out of a piece of 4-inch PVC pipe with end caps. The mounting bases and radial plate had to be packed among his other effects, for travelling.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - N1RL
Sr. Asst. Technical Editor

Title>PR1:Ten-Tec OMNI VI Plus MF/HF Transceiver
Author>Wolfgang, Larry - WR1B

Source>QST Nov 97, pp. 58-61
Abstract>Performance review of the latest version of the OMNI VI. It provides more sophisticated DSP and other improvements over the older model.

Digest>The OMNI VI Plus is an upgrade of the OMNI VI and is the top-of-the-line for Ten-Tec. Since the OMNI VI was reviewed in QST Jan 93, this review is confined to the changes from the earlier model.

The major changes are: a much more sophisticated digital signal processing (DSP) system is provided; the single, long menu was divided into three shorter ones; it is now possible to select different tuning rates for the Main and the RIT tuning, according to mode; the CW sidetone oscillator can be toggled on and off by the front panel button, and its volume is set independently of the audio gain; an LP button activates the DSP low-pass filter, and it is available on all modes with a corner frequency adjustable from 600- to 1400-Hz.; two front panels allow for selecting two different narrow-band IF filters.

The reviewer praised many aspects of the rig's operation. The ease of operation is outstanding; most operators are able to make good use of its major features at first glance because it is so intuitive. The front panel is large and the controls are not jammed closely together. The CW keying is excellent, and that judgement is confirmed by the oscilloscope patterns of the keying waveform at high speeds, a photograph of which is included in the article.

The operator's manual is unusually complete and easy to read. The reviewer's final judgement was that "the OMNI VI Plus should be an excellent choice for contesting or serious DXing, yet it continues to be easy to use."

The manufacturer's list price is $2585, the matching power supply is $275, and optional IF filters are $89 each.

Title>PR2:SSB Electronic LT2S Mk II 2-Meter Transverter
Author>Wilson, Mark - K1RO
Source>QST Nov 97, pp. 62-63
Abstract>Description and performance review of a sophisticated 2-meter to 10-meter transverter. Provides very good performance on all modes.

Digest>The LT2S Mk II is a transverter intended as the ultimate for weak-signal 2-meter work. It converts 2-meter received signals to the 10-meter band and is specifically designed for a low noise figure and high adjacent-channel rejection. It works on all modes and is meant to be used with an HF transceiver as a tunable IF. This allows operators to take advantage of all the features of their high-performance HF rigs while operating on 2-meters.

The receiver uses a gallium arsenide FET preamplifier followed by a 3-pole bandpass filter and a high-level double-balanced diode mixer. On-the-air performance was found to be excellent. Tests made by the

ARRL laboratory verified that the noise figure is 1-dB. and the overall conversion gain about 21-dB.

In transmitting, the 10-meter signal passes through an adjustable attenuator, diode mixer, filters, and four stages of amplification. The rated power output is 20-watts.

Provisions are made for using the transverter with all combinations of accessory equipment, such as driving a high-power amplifier with the transmitter output and using a receiving preamplifier at the antenna.

The reviewer found that the receiver is very quiet. The background noise is audible, but not enough to move the receiver's S-meter; signals "jump out" of the noise. It handles strong, local signals well and even with the loudest of them, the reviewer found that he could move up or down the band a few kilohertz and continue to operate with no difficulty.

SSB Electronics is a well-known German manufacturer of high-end equipment. The selling price is about $890 in the USA.

Title>PR3:M(2) 2M12 Yagi Antenna
Author>Ford, Steve - WB8IMY
Source>QST Nov 97, pp. 63-64
Abstract>Performance review of a 12-element 2-meter Yagi antenna.

Digest>M(2) Enterprises produces antennas and the Model 2M12 is a 12-element 2-meter Yagi. It can be mounted for either horizontal or vertical polarization. It provides high gain and excellent rejection of received signals that are not within the 36-degree width of the main lobe.

The boom is 19.5-feet long and the entire antenna weighs 8-pounds. The wind load is only 1.5-square-feet, so a modest mast and rotator is sufficient for mounting.

The construction is solid and the appearance is thoroughly professional. It should be good for many years of weather exposure. The manufacturer's list price is $149.

Title>PR4:Drake TR270 FM Transceiver
Author>Ford, Steve - WB8IMY
Source>QST Nov 97, pp. 64-67
Abstract>Review of a new VHF transceiver made by R. L. Drake Company. It receives on 2-meter and 70-centimeter bands, but transmits only on 2-meters.

Digest>The TR270 is the first amateur transceiver that the R. L. Drake Company has produced for the last 12 years. It is a high-performance rig carrying a correspondingly high price. In its features, it differs from any other transceiver on the market. Some observers have called it

"quirky", considering the features that it contains, and those that it omits.

The rig is designed for receiving and transmitting FM and digital modes in the 2-meter band plus receiving on the 70-cm. band. It does not receive SSB or AM signals. It includes two completely separate receivers: receiver A covers 144- to 148-mHz. only; receiver B covers 136- to 174-mHz. and 420- to 470-mHz. The transmitter covers 144- to 148-mHz. only.

The unit is larger than most current transceivers currently on the market and is designed for desktop use. It contains its own AC power supply.

The designers have made provision for packet operation including a plug-in TNC board as an extra-cost option. This is a full-featured, 1200/9600-baud TNC that supports a mail box, KISS capability, a node function and GPS compatibility.

The transceiver also contains a unique asset for satellite operations: automatic Doppler compensation. There is a SAT button on the front panel; once a satellite signal is tuned in and the button is pushed, the receive frequency will automatically tune in 100-Hz. steps to follow the Doppler shift as the "bird" passes overhead. The reviewer states that this is the first time he has seen this feature offered on any transceiver.

Another extra-cost feature is a plug-in WEFAX demodulator for those interested in capturing weather satellite images.

The manufacturer's list price for the TR270 is $999. The packet TNC adds $250, and the WEFAX demodulator $99.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Ultra Simple W1AW Receiver Notes
Author>Kitchin, Chuck - N1TEV
Source>QST Nov 97, p. 70
Abstract>Discusses the "Ultra Simple W1AW Receiver" described in QST May 97. Treats the operation of the diode mixer; also problems some builders have encountered.

Digest>In this letter, N1TEV answers questions that have been raised by several readers of the article: "An Ultra Simple W1AW Receiver" in QST May 97. He discusses at length the operation of the receiver's diode mixer and shows why the diode must be a germanium 1N34. A silicon diode will not work.

Some builders have not been able to get Q2 to oscillate. In most cases the problem has been that the tickler winding of L1 is incorrectly phased or a poor-quality capacitor is used as C2. To correct the former problem, reverse the leads. For the latter, be sure to use a mica capacitor of proper value.

If the radio works but one or more AM broadcast stations are heard in the background, be sure that the metal box cover is grounded. If that still does not help, insert a 20-microHenry RF choke in the antenna lead.

Title>TC2:Complex Transmission Line Characteristic Impedance - How Important Is It?
Author>Michaels, Charles - W7XC
Source>QST Nov 97, pp. 70-71
Abstract>Discusses N6BV's article: "Transmission Line Characteristics.." in QST Aug 95. Concludes that reactive components of the characteristic impedance can be ignored in practical amateur antenna problems.

Digest>In this letter, W7XC refers to the Technical Correspondence item: "Transmission Line Characteristic Impedance and Losses" in QST Aug 95, by Dean Straw - N6BV. In the current letter, W7XC discusses the effect of the reactive component of transmission line impedance that is usually neglected in transmission line calculations. He points out that it is critical in some problems, and also points out that under extreme conditions it can cause a negative SWR.

The appropriate calculations can be made using the computer program TLA that is distributed with the latest issue of the ARRL Antenna Book, or using Mathcad, another program. Calculations of line loss for a wide variety of loads and lines at frequencies throughout the amateur bands has shown that the differences between line loss calculations that incorporate, or do not incorporate, the reactive components are negligible for reasonable, common amateur antenna systems.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Sr. Asst. Technical Editor

Title>HK1:A Fold-Over All-Band Mobile Antenna
Author>Drager, Timothy L. - WA3UEB
Source>QST Nov 97, pp. 68-69
Abstract>Describes a modified Hustler mobile all-band antenna that allows raising and lowering from inside the vehicle.

Digest>WA3UEB has modified a Hustler foldover all-band whip antenna and mounted it on the top of his station wagon, near the rear of the roof. He can raise it to full height, or lower it until it is secured in a horizontal position with the upper tip pointing forward over the front of the vehicle, without leaving the driver's seat.

He modified the foldover base with an extra lever attached to a Bungee cord that tends to keep the whip in the vertical position. To pull it down to the horizontal position, pointing forward, a piece of fishing line is attached partway up the mast. It passes through a hole in the roof just over the driver's position where it wraps onto a fishing reel mounted on the ceiling. By turning the crank on the reel the author can pull it down, or by releasing the brake he can let it return to the vertical position. When it is vertical, the line acts as a forward stay holding the mast upright even when the vehicle is moving at high speed.

He uses the antenna on all MF and HF bands through the use of an automatic antenna tuner mounted on the ceiling underneath the base of the antenna. He has a full set of Hustler loading coils which he changes when changing bands. Several photographs illustrate the details of the construction.

Title>HK2:Garage Door RFI
Author>McCook, Jim - W6YA
Source>QST Nov 97, p. 69
Abstract>Describes RFI caused by infrared sensors in a Genie garage-door opener. Manufacturer will replace faulty ones at no charge.

Digest>W6YA has a Genie garage door opener that generated severe RFI across the HF bands. He discovered that it was emanating from the infrared sensors. After he contacted the manufacturer, they supplied replacement sensors that do not radiate.

Anyone else who encounters this problem should contact Genie at (800) 995-1111 and ask for Darlene, who is familiar with the problem.

Title>HK3:Tight-Place Test Leads
Author>Frazier, John - KB5WCW
Source>QST Nov 97, p. 69
Abstract>Make test prods from safety pins for restricted spaces.

Digest>KB5WCW relates how he made test prods for the leads on his voltmeter from safety pins. He cut off the heads of the pins, saving the round spring and pointed end. Then he grabbed each pin with one of the alligator clips on his leads. This made it possible to measure the voltage between two contacts in a small female connector that were too close together for his prods. He also finds the sharp points useful to punch through the insulation and measure voltages on insulated wires.

Title>HK4:IC-706 Mike Problem
Author>Young, Carl - K5HK
Source>QST Nov 97, p. 69
Abstract>RF feedback problem with the IC-706 is caused by using the mike socket on the back of the rig. Use the jack on the front instead.

Digest>K5HK has had difficulty with RF feedback while operating his Model IC-706 transceiver with the microphone plugged into the connector

on the back of the rig. He has found that the problem goes away when he uses the microphone jack under the control panel in the front of the rig.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Nov 97, pp. 47-48
Abstract>Questions and answers of particular interest to newcomers to amateur radio.

Digest>Questions and answers in this issue discuss: the Farnsworth method of teaching Morse code; the load placed on the engine of a vehicle by a radio transmitter; WARC bands; wire gauges and their specific resistances; measuring high DC currents; the General Mobile Radio Service (GMRS); the importance of a direct ground connection to a magnetic mount antenna; Beverage antennas; and the frequencies used by the Mars Pathfinder to communicate with Earth.

Title>NHC2:Toning Down Alerts
Author>Cox, Donald - AA3EK
Source>QST Nov 97, pp. 50-51
Abstract>The USA network for broadcasting emergency messages has been changed. The new one is called the Emergency Alert System (EAS). It will be used for public warning of all kinds of hazardous situations.

Digest>The Emergency Broadcasting System (EBS) that was maintained throughout the Cold War years to be used in the event of a nuclear war has now been changed. By the end of 1997, all commercial broadcasting stations, including those on cable, will be required to interface with a new Emergency Alert System (EAS). It will use a new format that will include both voice messages and also digital messages using two-tone AFSK data streams.

Other broadcast services such as paging systems, cellular phones, etc. may choose to participate, as well. Also, the NOAA Weather Radio Network of stations that broadcast weather messages on frequencies between 162.40- and 162.55-mHz. will adopt the same message format as that used by the EAS.

The combination of the EAS and NWR will carry all kinds of county, state or national emergency alerts concerning dangerous weather and other perilous conditions that threaten.

Title>NHC3:A Six-Channel Distribution Amplifier
Author>Weisman, Sumner - W1VIV
Source>QST Nov 97, pp. 52-54
Abstract>Build an audio amplifier with six output channels for use in

teaching, or testing, students of Morse code.

Digest>This describes the construction of an audio distribution amplifier for use in teaching or testing students of Morse code. Commonly, code practice involves a tape recorder with loudspeaker output in front of a group of copying students. When a test is given under those conditions, extraneous noises can be distracting and can cause some students to fail a test that they otherwise might pass. W1VIV's remedy is to give each pupil headphones to provide the clear code sounds and block out other noise.

This requires an amplifier and distribution box with multiple output jacks. The author built one using a single-transistor emitter follower that feeds the 1000-ohm primaries of six audio output transformers wired in parallel. The secondaries of the transformers are designed to drive 8-ohm loads and are connected to six output jacks on the front panel of the box. A single pot is provided for gain control.

A schematic diagram and detailed parts list are included in the article.

Title>NHC4:A Simple Microphone/TNC/SSTV Switch
Author>Cieslak, Chris - AA9HD
Source>QST Nov 97, pp. 55-57
Abstract>Describes a switching system for instantly selecting voice, RTTY and SSTV modes.

Digest>AA9HD operates his HF transceiver in voice, RTTY, and SSTV modes. When changing modes, he has to change input and output connections among the microphone, TNC, computer, and transceiver. To make this easy and quick, he built a box containing a three-position switch that is connected to perform all the necessary switching instantly.

When he analyzed all of the leads that needed to be changed, he realized that only two actually need to be switched: the MICROPHONE IN and RECEIVE AUDIO leads. Consequently, only a two-pole rotary switch is needed, such as the Radio Shack No. 275-136A. All other leads can be permanently connected.

The article explains how and why each wire does or does not need to be switched. A schematic diagram and instructions for wiring the switch to Yaesu, Kenwood, or ICOM transceivers are included in the article.

Source record: 184279
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the October, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:The 40 M SLR - a Shielded-Loop Receiver
Author>Wissell, Daniel - N1YBT
Source>QST Oct 97, pp. 33-38

Abstract>Building a single-band superheterodyne receiver from three ICs and a very few other components.

Digest>N1YBT describes in this article a high-performance single-band receiver. It is designed around three ICs that provide all the functions of a superheterodyne circuit.

He has built three versions of the design that differ only in minor details. One detail is the method of tuning the local oscillator. In one, he uses a classic variable capacitor as a tuning element; in the other two, he substitutes a voltage-variable capacitor for tuning the oscillator tank circuit.

The local oscillator is a standard Colpitts circuit. In one of the models that uses the voltage-controlled capacitor, he varied the DC control voltage by a ten-turn pot. In the other, he used two single-turn pots in a classic two-dial arrangement in which one covers the whole band and the other is a bandspread control, similar to the arrangements used on most early vacuum-tube receivers.

The only RF selectivity is provided by a shielded loop antenna that is tuned to resonance and becomes an integral part of the receiver. He has built several different loops, two of which are illustrated by dimensioned diagrams and photographs. All the loops are diamond shaped, mounted on crosses built of quarter-inch diameter wooden dowels. For either 30- or 40-meter use, the cross bars are 16-inches long (41-cm.); for 80- meters, they are 24-inches (61-cm.)

One loop was made of small-diameter coax, another of small-diameter hardline, and the third of plain wire. The plain wire is a single turn of Number 20 or 22 unshielded wire; two additional wires are run parallel to the loop wire, spaced about one-quarter inch from each side of it, and connected only to ground. They act as a shield and perform that function nearly as well as the shield braid in the coax.

In all cases, the antenna is mounted vertically, attached to the receiver assembly. The antenna shields are grounded at the bottom and surround the loop wire throughout its entire length except for the top corner, where there is a short gap in the shield. The antenna, receiver and all, are used indoors and are manually rotated to take advantage of the directivity of the loop.

A complete kit of parts, without enclosure, is available for $101.50, including domestic shipping in the USA, from Jade Products, Inc., Box 368 E. Hampstead, NH 03826.

Title>TA2:Sporadic E - A Mystery Solved?
Author>Whitehead, Dr. David
Source>QST Oct 97, pp. 39-41
Abstract>Describes the physics involved in Sporadic E ionization in the upper atmosphere.

Digest>In this article, Prof. Whitehead discusses what is known about Sporadic E ionization in the upper atmosphere. Although it has been studied for many years, much is still not known about the phenomenon.

The name refers to clouds of ions that occasionally form in the atmosphere's E layer, at heights between about 95- and 150-kilometers (60- to 90-miles). When they occur, the electron densities are very high, sometimes 100-times greater than that normally found in the F-layer.

Three types of Sporadic E have been identified. One type, called Night Sporadic E, forms at night around the north and south poles, caused by electrons and protons entering the upper atmosphere at high velocities. The second type is known as the Auroral type and also forms near the poles, but in daytime. This type is much denser and causes radar echoes at frequencies as high as 200-mHz., whereas with the Night type, frequencies seldom exceed 20-mHz.

A third type is called Equatorial, and forms during daylight hours in a narrow band over the magnetic equator. It provides weak scattering of radio waves below 60-mHz.

It is Mid-Latitude Sporadic E that is most familiar to hams. It forms between the magnetic equator and the auroral zones in thin layers of very dense ionization, only one or two kilometers thick (3300- to 6600-feet). They tend to reflect radio waves like a mirror and the maximum usable frequency (MUF) can reach 150-mHz., or above. Radio transmissions via reflection from these clouds are often stronger than almost any other ionospheric propagation mode.

This article describes a number of phenomena caused by the interaction of these ions and flows of electrons, and also describes other reactions that are observed but cannot be explained at this time. The article will be continued in the next issue of QST.

Title>TA3:TiCK 2 - The Tiny CMOS Keyer 2
Author>Diana, Gary M., Sr. - N2JGU and Mitchell, Bradley S. - WB8YGG
Source>QST Oct 97, pp. 42-45
Abstract>Building an electronic keyer that provides almost every feature a CW operator could want. It is built around a single IC chip plus a few additional components.

Digest>This article describes an electronic keyer built around an IC chip that provides almost every imaginable feature that anyone could want in a keyer. Because all of the functions are built into the chip, the circuit is very simple and contains only about a half dozen components. It can be built in a tiny space.

Among the features of the completed device are: a memory message capable of calling CQ with the owner's callsign; Modes A and B iambic keying; speed control; very low current consumption; a "tune" function that holds the key line active while the operator tunes station equipment; an audible sidetone; selectable paddles that allows the dot and dash

paddles to be reversed; and weighting adjustment, with a 3:1 default.

The chip used is the PIC 12C509 that contains 512-bytes of ROM and 41-bytes of RAM. The keyer functions are all programmed in the ROM; settings, such as speed, iambic mode, message, etc., are stored in RAM. The RAM is volatile, so requires that voltage be left on at all times, but the current drain is so low that it does not appreciably reduce battery life.

A kit of parts, including the TiCK-2 program IC, PC-board, parts and manual is available for $21, postpaid in the USA. Canadian residents add $5, other nations $6, for shipping. The supplier is Embedded Research, PO Box 92492, Rochester, NY 14692.

Title>TA4:How's DX? - Now!
Author>Zuerneck, Helmut - DL4FBI
Source>QST Oct 97, pp. 46-47
Abstract>Describes a system that automatically samples NCDXF/IARU beacons and formats a frequently-updated report on radio propagation to all parts of the world on five separate bands.

Digest>An article in QST Sep 97 described the NCDXF/IARU beacon system that continuously allows radio operators in most parts of the world to check propagation conditions to nearly all other parts of the world, on five frequency bands. Using their station receivers, operators could listen to the beacons and judge by the signal-strength meter, or by ear, how well signals are being propagated.

In this article, DL4FBI describes an automated system that samples the signals, digitizes them, measures the signal strength, and accumulates the data into a computer file, all without human intervention. The system is designed for use with a Kenwood TS-870. It uses the transceiver's computer-controlled frequency selection system and its communication link that feeds a digitized signal strength reading, and other variables, to a computer. The author's system can, no doubt, be modified to work with other modern receivers and transceivers that are similarly equipped.

He has written software to control the radio, record the data, and format it into a report that can be displayed on the monitor and/or printed on paper, in either English or German. The software is available for downloading from the ARRL "Hiram" BBS by telephone, at (860) 594-0306 or by ftp from oak.oakland.edu in the pub/hamradio/arrl/qst-binaries directory under the file name: dl4fbi.zip.

Title>TA5:Rugged Coil Forms and Weatherproof Enclosures
Author>Johns, Robert - W3JIP
Source>QST Oct 97, pp. 48-50
Abstract>Building antenna components using styrene plumbing fittings and

polystyrene sheet materials easily obtained.

Digest>In this article, W3JIP calls to the attention of all hams who like to build their own antennas that polystyrene plumbing fittings can be used to make strong, durable and attractive loading coils and traps for antennas. They are known to the plumbing trade as "styrene fittings", and are widely available where plumbing supplies are sold.

In addition, commercially-available fiberglass tubing is made in standard sizes that telescope with standard aluminum tube sizes. Contact Max-Gain Systems, Inc., 221 Greencrest Ct., Marietta, GA 30068-3825. Pieces make excellent coil forms that also provide structural strength for assembling antenna elements.

Styrene caps and couplings are made by: Plastic Trends, Inc., 6200 26-Mile Road, Washington, MI 48094. Some sizes are stocked by Home Depot stores. Sheets of polystyrene in thicknesses from 0.010- to 0.080-inches (250- to 2000-microns) are available from hobby stores and also from the manufacturer: U.S. Plastic Corp., 1390 Neubrecht Rd., Lima, OH 45801. A disk cut from one of the sheets can be glued across the open end of a pipe cap or coupling to form a watertight enclosure. The best adhesive for gluing styrene is Q-Dope which is available from many electronic parts shops. It is manufactured by G. C. Thorsen, PO Box 1209, Rockford, IL 61101.

The article includes photos showing a number of caps and coils made by the author.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - N1RL
Sr. Asst. Technical Editor

Title>PR1:Yaesu FT-920 MF/HF/6 Meter Transceiver
Author>Kennamer, Bill - K5FUV
Source>QST Oct 97, pp. 72-77
Abstract>Performance review of a new Yaesu rig that is almost, but not quite the top of their line. It replaces the FT-990, adding several new features.

Digest>The Yaesu FT-920 is a high-performance rig that is almost, but not quite, at the top of Yaesu's line. It replaces the FT-990 and adds several new features that were not in its predecessor.

One striking new feature is that, in addition to the nine MF/HF bands, it also covers the 6-meter band. Another is a built-in digital voice recorder that will record, and instantly play back, up to 16-seconds of audio in transmitting or receiving.

Also, "shuttle-jog tuning" is provided. That is, the main tuning knob is actually two concentric knobs; the inner one is a normal tuning knob whereas the outer one causes the frequency to sweep upward or downward

by the direction it is turned, and the rate of the sweep is varied by how far it is turned.

Two features that were formerly extra-cost options are now standard: the automatic antenna tuner and an electronic CW keyer. Two features that are standard on some other transceivers are extra cost options on this one: FM operation and AM transmitting. The most significant added feature is Digital Signal Processing (DSP). The FT-990 contained a switched-capacitor filter that was described in such terms that many users thought it was DSP, but it was not. The '920's DSP acts on the audio, not a special low IF frequency; but it provides superb performance in noise reduction and with band-pass filters.

Receiver performance, as verified by the ARRL Testing Laboratory, is excellent and nearly equals, or surpasses, the other latest amateur models. The only exception to the excellent ratings was slightly excessive intermodulation distortion (IMD) in the transmitter. In that regard, the performance of the 920 is definitely substandard.

The manufacturer's list price is $2300.

Title>PR2:Tune In the World for Less Than $300! - Drake SW1 and Radio Shack DX-394
Author>Lindquist, Rick - N1RL and Moore, Bill - NC1L
Source>QST Oct 97, pp. 77-79
Abstract>Describes two new wide-band continuous-coverage receivers designed for short wave listening.

Digest>This review describes two general-purpose receivers designed for broadcast listening on both long wave and short wave bands.

Drake SW1
The SW1 is Drake's entry-level receiver. It represents the first step above the portable, battery-operated models offered by several manufacturers. It provides continuous coverage from 100-kHz. to 30-mHz. It containing dual IFs for better selectivity and image rejection, and also provides 32 programmable memories to save frequency settings.

The radio receives only one mode, AM, and does not offer synchronous detection. It also does not contain an S-meter or any other measure of signal strength. It runs on 12-volt DC power and is supplied with a wall-cube power supply.

The receiver's performance is adequate for casual listening but it suffers from spurious signals that appear at odd places across the frequency dial. It also has inadequate dynamic range.

The manufacturer's list price is $299.

Radio Shack DX-394
The DX-394 provides a substantial contrast with the Drake SW-1. The '394 offers many features: continuous coverage from 150-kHz. to 30-mHz.;

AM, SSB, and CW modes; 160 frequency memories; dual clocks; direct frequency entry from a keypad, or by a manual tuning knob; and a built-in power supply.

The size of tuning steps can be set to be 100-Hz., 1-kHz., 5-kHz., or 10-kHz. The rate at which the steps are repeated is a function of how fast the knob is turned.

Receiver performance is adequate for casual listening. To provide better selectivity, a 6.5-kHz. AM filter is available for $15 from Kiwa Electronics, 612 S. 14th Avenue, Yakima, WA 98902.

Manufacturer's list price is $249.99.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Signal Envelope Elimination and Restoration
Author>Freedman, David - W2VLX
Source>QST Oct 97, p. 82
Abstract>Describes a modulation mode developed 50-years ago that may be adaptable to Class-E amplifiers as described in: "High-Efficiency Class-E Power Amplifiers", QST May 97.

Digest>In QST May 97, an article: "High-Efficiency Class-E Power Amplifiers" was published. That article pointed out that switching amplifiers are not linear and are suitable for use only with modes that transmit full output power continuously, such as CW, FM, and digital modes.

In this letter, W2VLX describes a transmitting mode developed nearly 50-years ago called "envelope elimination and restoration" (EER) that he feels could be adapted to a Class E SSB transmitter.

In the 1950s, all experimentation used analog technology. The author believes that modern digital technology could be incorporated into an EER system that would make the operation more efficient, and he includes a block diagram illustrating how it might work.

Title>TC2:Easy Antenna Layout
Author>Gibson, Van R. - W4LLV
Source>QST Oct 97, p. 82
Abstract>Measuring the distance between two towers that cannot be measured directly. Does not use trigonometric calculations.

Digest>In QST June 97, W4PSJ showed a way of measuring the straight-line distance between two antenna supports when it is not possible to measure that distance directly, though it is possible to measure distance to each tower from a common sighting point. He used simple trigonometry.

In this letter, W4LLV describes how he makes the same type of measurement without using trigonometric functions, at all. He places a card table at the common viewing point where both supports are in plain view. On the table he tapes down a piece of paper and prints a dot on it. Next he sights from the dot to each tower, in turn, and draws a line aimed precisely at each. He makes the length of each line, measured in millimeters, equal to the actual distance, measured in feet.

When he is through, he has an exact map with the relative locations accurately plotted. He needs only to measure the number of millimeters between the ends of the plotted lines. That measurement gives the number of feet between the actual towers.

Title>TC3:Diode Protection - Another Aspect
Author>Metzger, Dan - K8JWR
Source>QST Oct 97, pp. 82-83
Abstract>Explains why, when several diodes are connected in series in high-voltage switching power supplies, all diodes must be shunted with capacitors.

Digest>This letter explains why, when several rectifier diodes are connected in series in high-voltage switching power supplies, all diodes should be shunted with equal-value capacitors. The reason is that the individual diodes may differ by several microseconds in the time that they require to turn off when the applied voltage switches from forward to reverse bias. The value of the capacitors can be calculated by the formula:

C = n * deltaT / R(s)

in which: n = the number of diodes in series
deltaT = the difference between turn-off times
R(s) = the series charging resistance (transformer winding resistance)

For 60-Hz. sine-wave rectifiers, such capacitors are not necessary because the change in the applied voltage is gradual, not instantaneous, and the differences in turn-off time between diodes are not critical.

Title>TC4:RFI TV Damage
Author>Phillips, Cully - N3HTZ
Source>QST Oct 97, p. 83
Abstract>Warning! Toshiba television Models CF-27xx can be damaged by strong RF fields, especially SSB.

Digest>The author, a TV repairman, warns that Toshiba television Models CF-27xx, built between 1988 and 1992, can be damaged by strong RF fields, especially SSB signals. He reports on two cases he observed, one in which an amateur was transmitting SSB on 6-meters and the next-door neighbor's TV set was connected to an outdoor antenna. In the other case, a ham blew out his own TV set when he tuned up his transmitter on 15-meters.

The sensitive part of the set is its X-Ray Shut-Down circuit. Strong RF pickup can provide a false and repeated activation of that circuit, causing failure of the horizontal-output transistor. He does not suggest any steps that can be taken to prevent the damage.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Sr. Asst. Technical Editor

Title>HK1:Fix Stuck Meters With Window Spray!
Author>Mandeville, Bob - N1EDM
Source>QST Oct 97, p. 80
Abstract>Meter movements may "stick" upscale because of static charge on the cover glass. Water or detergent spray will remove it.

Digest>Mr. Mandeville reports that one of the meters on his station equipment appeared to stick at a point on the scale. He discovered that the problem was caused by static electricity that built up on the glass. By experimenting, he found that spraying "Glass Wax" or "Glass Plus" cleaner on it cured the problem.

In an appended note, the Editor stated that he sprays plain water on meters when similar problems occur, and it works equally well.

Title>HK2:Clothes Washer RFI
Author>Hemby, Jerry O. - KE4TFE
Source>QST Oct 97, p. 80
Abstract>The timer in a washing machine may become an electrical noise generator. If so, replace the timer.

Digest>This letter reports that a strong line noise suddenly appeared in his receiver and drowned out all reception. He traced the source to the family washing machine. The switch in the timer was found to be the culprit; replacing it solved the problem.

Title>HK3:An Extension Ladder Support for Small Antennas
Author>Haughton, Joseph L. - K5IKB
Source>QST Oct 97, p. 80-81
Abstract>Making an antenna tower from a 30-foot extension ladder.

Digest>This letter describes how the author used a 30-foot extension ladder as a tower to support a light-weight antenna. It was erected alongside his house with the base attached to a stake, made of a short piece of water pipe sunk in concrete. The ladder was bolted to the roof of the one-story house to hold it vertical.

The support is quite adequate to hold a multi-band vertical monopole, and would probably suffice for one or more VHF beams, but it should not be used for larger and heavier antennas.

FEEDBACK (FB)

Title>FB1:"Homebrew Your Own Inductor", QST Aug 97.
Author>Isard, Phil - WF3W
Source>QST Oct 97, p. 83
Abstract>On page 35, in the second column of the side bar, the multiplication sign under the radical is wrong; it should be a plus sign indicating addition.

Title>FB2:"The CycleMaster", QST Sep 97
Author>Anonymous
Source>QST Oct 97, p. 83
Abstract>The entire right-hand side of the schematic diagram in Figure 2 is missing. The complete schematic in PDF format can be downloaded from the ARRL Web site at http://www.arrl.org/notes/qst/.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Oct 97, pp. 61-62
Abstract>

Digest>Questions discussed in this issue include: the radiation pattern of an 80-meter dipole only 35-feet (10.7-m.) high; power limitations in working amateur satellites; color coding of resistor values; using chimneys as antenna supports; the advantages of a feedline cut to an integral number of half-wavelengths; and adding an additional hard-disk drive to one's computer.

Title>NHC2:Catch a Falling Star
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Oct 97, pp. 63-67
Abstract>A "Beginner's Guide" to radio propagation via meteor-scatter.

Digest>NT0Z presents a "Beginner's Guide" to meteor-scatter communication. When meteors enter the upper atmosphere at very high velocity, they quickly heat to incandescence and leave trails of ionized air. The ions soon recombine with electrons, but while the trails are still ionized, they can reflect radio signals.

Ion trails typically last long enough to provide scatter communication on the 10- and 6-meter bands for 30-seconds to as long as several minutes. At 2-meters, that same trail will allow communications for only a few seconds to a minute.

Meteors enter the atmosphere continuously but, most of the time, they are infrequent at any one location. However, at several times during each year there are "meteor showers" during which a great many meteors

that are travelling around the sun in the same orbit collide with the earth.

During a shower at night with a clear sky, one can see the meteor trails visually. Since they travel together, the meteors will all seem to emanate from a single spot in the sky and radiate in all directions from it. The showers are named after the constellations that contain the point of origin. When this happens, meteor trails can repeat so rapidly that communications can be frequent, or on rare occasions, continuous.

Meteor scatter contacts usually occur between stations from 500- to 2300-kilometers apart (300- to 1400-miles). For best results, directional antennas should be used at both ends of the path. A fair amount of transmitter power also helps.

Astronomers recognize a large number of showers, most of which are too sparse to cause much radio activity. But several are noted as "major". Among them are:

Name Date Approx. No. per hour
Quandrantids January 3-4; 40 to 150
Eta Aquarids May 4-5 10 to 40
Arietids June 7 60
Perseids August 12 50 to 100
Orionids Oct 22 10 to 70
Geminids Dec 13-14 50 to 80

Title>NHC3:Jamboree on the Air - JOTA 97
Author>Swanson, Glenn - KB1GW
Source>QST Oct 97, p.68
Abstract>The 40th anniversary Boy Scout Jamboree on the Air (JOTA) will occur on October 18-19, 1997 in central England.

Digest>Forty years ago, in 1957, the International Boy Scout organization conducted an International Jamboree on amateur radio. It was named the Jamboree on the Air (JOTA). The 40th anniversary event will be held on October 18 and 19, 1997 in central England, where the first JOTA was held.

Title>NHC4:A Portable Ground Plane for Mobile Antennas
Author>Aiello, Mike - N2HTT
Source>QST Oct 97, pp. 69-71
Abstract>Describes a portable antenna usable on 20- or 40-meters. It can be conveniently carried in knocked-down form and easily erected wherever desired.

Digest>N2HTT likes to operate QRP on 20- and 40-meters. When laying plans for a summer vacation at the seashore, he built a temporary antenna that he could set up in the back yard of the cottage where his family would be living. It is also easy to remove and pack up, leaving no permanent scars caused by the installation.

He had a mobile antenna with a magnetic base and interchangeable single-band whips for the two bands. For his stationary installation, he wanted to lay 16 ground radials to get some improvement over the ground provided by the body of a vehicle.

A convenient support for the base was provided by his camera tripod. He mounted a square electrical junction box on the tripod; the steel cover plate of the box provided a surface onto which the magnetic base could hold. Then he attached 16 radial wires to the assembly and stretched them out on the ground.

Mr. Aiello reports that the performance of the antenna on 20-meters was excellent; the 16 radials clearly made a great improvement over the car body. On 40-meters, performance was not quite so striking, probably because a center-loaded 7-foot whip (2.13-m.)is considerably less effective on 40-meters than on 20.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The Ohio River Flood of '97
Author>Nie, Michael - KB8VMX
Source>QST Oct 97, pp. 28-32
Abstract>How Cincinnati hams, mainly members of the Queen City Emergency Net, provided vital communications during the 1997 Ohio River flood.

Digest>In March, 1997, the Ohio River at Cincinnati, and smaller rivers and creeks over a considerable area of Ohio and Kentucky, suffered the worst flood in 30-years. The water rose to inundate a great many buildings in the city and over a very large rural area. Traffic was, in many areas, totally blocked. Electricity was lost and landline telephone cut in many areas. Even cellular phone systems were crippled because of loss of power and/or inundation of the repeaters.

From Saturday, March 1, until about Sunday, March 9, amateur radio was called upon to fill in for emergency communications. In many isolated areas amateur radio was the only means of communications.

Fortunately, Cincinnati hams have had for years an organization known as the Queen City Emergency Net (QCEN), an amateur radio club affiliated with the Red Cross. The QCEN went into action along with other radio clubs and individual operators who volunteered.

The primary lesson that was learned was that modern-day communication systems cannot be fully relied upon in major emergencies. Radio amateurs still perform indispensable services, even in this day of cellular phones and satellite communications.

Title>GI2:What's New About the FCC's New RF-Exposure Regulations?
Author>Hare, Ed - W1RFI
Source>QST Oct 97, pp. 51-52
Abstract>Describes the confused announcements and rulings by the US

Federal Communications Commission (FCC) regarding exposure to electromagnetic fields caused by radio transmitters.

Digest>In August of 1996, the US Federal Communications Commission (FCC) issued a ruling regarding human exposure to RF fields. The initial announcement was confused and, if some of its statements were taken literally, would require actions to be taken by radio operators, both professional and amateur, that were either impractical or impossible.

Since the first release, additional announcements and rulings have emanated from the FCC and some clarity is emerging. Initially, it was ruled that all radio stations would have to be in compliance with regulations (which had not yet been published) by January 1, 1997. Then, later, the date was moved forward to January 1, 1998. Now, existing installations do not necessarily have to be in full compliance with the rules until September 1, 2000. However, if a licensee must file a Form 610 with the FCC for any reason, whatsoever, the station must be brought into compliance with the rules before the form is filed. Hence, anyone who must renew their license during that period must comply.

The commission has, in the meantime, issued clarifying announcements that make it seem that few amateur stations will ever have any problem with the regulations. For one thing, amateur stations will be considered to be in compliance if their peak output power is below certain threshold levels that depend on the frequency band in use. Those thresholds are 500-watts output for all bands below 7.3-mHz. At 30-meters, the threshold is 425-watts; at 20-, 200-watts; at 17-, 125; at 15-, 100; at 12-, 75; and at 10-meters, 50-watts. The threshold remains at 50-watts from 6-meters to 1.23-meters, but at 70-cm., it goes up to 70-watts; at 33-cm., 150-watts; at 23-cm, 200-watts; and at 13-cm. and above, it is 250-watts.

If one wants to operate at higher power than those thresholds, it is only required that they perform evaluations of their own stations according to additional rules to be published later. The important point is that amateurs will evaluate their own stations; no inspector will come to pass on the evaluation.

To summarize the current status of the regulations, it now seems likely that very few, if any, amateur stations will be forced to change either equipment or operating procedures.

Title>GI3:The Radio Clubs of Yugoslavia
Author>Pataki, George - WB2AQC
Source>QST Oct 97, pp. 53-54
Abstract>Describes the visit to cities in former Yugoslavia by a US amateur.

Digest>In the summer of 1996, WB2AQC visited a number of cities in the former Yugoslavia and met many hams there. He made lots of friends and

took photographs of them and their stations. This article is made up mainly of some of the photos.

Title>GI4:MFJ - A Silver Anniversary Success Story
Author>Lindquist, Rick - N1RL
Source>QST Oct 97, pp. 55-56
Abstract>A short history of the MFJ Company, a US manufacturer of radio equipment.

Digest>The MFJ company is a sole proprietorship of Martin F. Jue (note the initials) - K5FLU in Starkville, Mississippi. Mr. Jue founded the company 25-years ago when he was on the faculty of the electrical engineering school at Mississippi State University, in that town.

The business now employs some 200 people. It has absorbed Ameritron, Mirage, and Vectronix and is a very successful company.

Title>GI5:An Average Op's Guide to Contesting Fun
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Oct 97, pp. 57-60
Abstract>How to maximize the fun of ham radio contests.

Digest>This article is a summary description of ham radio contests. There are many different contests run each year, many sponsored by the ARRL and others sponsored by other radio magazines and clubs in the USA and elsewhere. But in all cases, ham contests involve making as many radio contacts as possible using the frequencies, modes, and time periods specified in the contest's rules. Generally, a premium is placed on working stations in different regions, called multipliers, and scores are calculating by multiplying the number of QSOs times the multipliers.

After the contest is over many different winners are selected, each for scoring the highest total in one of a number of categories. Categories are specified by power output, bands operated, number of station operators, and the like. Winners are sent certificates and their names listed in ham magazines.

In all contests, there are prescribed items of information that must be exchanged between the operators in each QSO. Usually, they exchange callsigns, signal reports and locations. Other items are added in some contests.

The remainder of the article gives hints and tips for operators to increase their scores and enjoyment of the affair.

Bob Snyder wrote in message ...

>I am looking at the Timewave DSP599zx and am wondering if a DSP really
makes

I have a DSP599zx and it works well.
Advantages:
1. Continuously adjustable upper and lower band frequency cut off (full
time)
2. Excellent view of what's happening (you get to see your settings)
3. Dual channel operation (but only one at a time)
4. Save settings and can be used as test equipment etc. (signal generation)
5. Small delay from input to output of audio signal (NIR-12 has long delay)
Many more including being able to power speakers directly (most do) etc..

Disadvantages:
1. In a head to head comparison with NIR-12 the ZX did not reduce noise as
much.
2. RS-232 cannot be used as a programming input to the DSP (NIR-12 does).

Depending on what you are doing, DSP works very well especially for noisy
environments. When you get a SSB signal a few KHz from the signal you want
to listen to you can easily cut him off with the upper frequency cut off ant
the same time you are reducing the general noise around the signal you want
to hear. This does not increase your signal level but does attenuate the
noise around the signal. The result is easier copy and lower ear fatigue.
Email me if you want more conversation on this..

Thanks
John Scott

I'm not sure what frequency range you are referring to. For RF and microwave, the HP 859X series of analyzers can drive a VGA monitor directly, but I don't think that's what you meant. For interface via win95 or similar, you could run something like HP VEE, which will talk to/control the SA and can output what it measures on a 'virtual screen'. Basically you get a control panel with the same sorts of functions available on the SA harware and a display of the data the analyzer is currently measuring. On reasonable hardware the update rate can be pretty much real time.

There are also audio spectrum analyzers available, implemented in software, which will display directly on a PC. Some of these are shareware I think.

I just got my ARRL CD's containing QST magazines from 1950 to 1959. It's sure fun to see how times used to be. But as much as they were different they are also the same. The following was in the Correspondence (letters to the editor) in the March 1950 QST issue. Is there a familiar ring to the gripes? 73 Lenny

NEW PROPOSALS
Box 718, Lovington, N.M.
Editor, QST:
I am unhappy over the continued proposals of the FCC to change amateur rules. To be specific, what is the justification for an Extra Class license? The present Element 4 for Class A is an advanced technical examinatian and additional pertinent questions covering recent developments could be added at any time. About the only significant innovation is the 20-w.p.m. test, appropriate enough for an advanced c.w, license if there were one, but about as logical for restricted 'phone operation as forcing children to memorize poetry; it usually causes them to hate poetry. The vague indeterminate language makes me nervous. For example in Section 12.23, what are to be the authorized special privileges for Extra Class? Section 12.27(f) adds to the feeling of insecurity. Who knows what the rules may be when it comes time to renew?

Carl, I think your doing a bit of assuming here. Nothing in my statement indiciated which side of the fence I am on for the issue of dropping CW as a requirement for an Amateur Radio License.

It is true that I had to copy code at 24 WPM to graduate. It is also true
that I experienced Navy communications going from CW on a hand key for sending traffic to a 600 WPM packet system. I was in for 20 years.

Item #1
Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #2
Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #3
Hello All;
I'm selling a "like new - used 9 times" Mirage B 1016G [made
by KLM not by MFJ] Pre-amplified 10w-in 160-170w-out 2mtr
amplifier with all orignal boxes & docs.
Worked the "Sats" with this amp & has super preamp. Reason
for sale is strictly financial. I am asking $270 + shipping OBO.
Sorry No CODs...
Please re: me via email: n2rif@amsat.org Or Packet
N2RIF@K2UL.NJ.USA.NOAM. You can also try
calling but my phone is usally busy. My ph# is 609-386-9382..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Cliff,

My favorite is "HyperLog". You can download a current version,
full-function shareware, at the authors web site:

http://www.akorn.net/~w4wt/

It's a superb logging program, easy to use, and complete in every
detail. The author, Joe Spear, provides SUPER support and maintenance
of the program.

(I have no connection with the product, except as a satisfied user
for many years.)

Masa,

Excuse me but the "spam" that you allegedly received from us was not spam at all. That e-mail was sent to a database of address that we have complied VOLUNTARILY on our webpage. You added your address to this list youself, and if you'd like I can forward you a copy of the e-mail in which you did so.

I concede that I made a mistake by pasting the addresses into the "TO" field of the e-mail instead of the "Bcc:" field. However, that does not make my e-mail "spam."

I suggest you cancel this usenet post immediately, as it amounts to defamation of this company. Further, I note that you yourself have been accused of spamming the usenet, and that you have copyrighted pictures (stolen from our www.adi-radio.com webpage) posted on your radiotelephone.net page. While I haven't taken any action against you for this yet, I certainly could.

Your post on this matter is incorrect, defamatory, and, frankly, illegal. Please cancel it at once.

Find something else to connect to your serial port, and ensure that your
serial port is working okay.

If not, its probably in the PK. Several years ago I had this happen to
me, and I had to replace two small ICs (can't remember their numbers
offhand, I'd have to see the schematic again) which cost about $3 total.

<<Antenna experts say one should tune an antenna for MAXIMUM FORWARD POWER not minimum SWR. They do not (always) occurr at the same tuning point.>>

Further to my previous post . . .

Is it possible that by Forward Power, you mean radiated power in the intended direction (as opposed to the forward traveling wave on the transmission line)? In that case, this advice begins to make some sense. It would be a shame to distort the radiation pattern of a directive antenna for the sake of a marginal improvement in VSWR.

But the VSWR is still a measure of efficient power transfer into the antenna. In addition, transmission line losses climb and power handling capability of the transmission line decreases with rising VSWR. It is not unimportant to maintain a low VSWR on a coax transmission line.

Hi Blake, If the SWR is constant with varying power, then maximum
power will be radiated when the forward power is maximum because
(forward minus reflected) is maximum when forward is maximum (if
the SWR doesn't change). But IMO, what Dick was trying to say is
that an antenna should be tuned for maximum field strength, not
minimum SWR. I'll bet you've heard that one before.

Bob,

First of all congratulations on being a good boy. I am sure Santa will reward you appropriately.

A DSP is great, but it does not perform miracles. I find that it is very good at removing white noise and it can dig some SSB stations out of the background noise quite well. However, as someone else pointed out, it is *not* a replacement for a good IF filter, but it *does* augment the IF filter.

The noise reduction is somewhat related to the level of filtering (some of the DSPs allow you to set the level), but at a high level of filtering the DSP will also distort the voice signals. That may be acceptable for working the odd DX station, but is not much fun for ragchewing. I would recommend a DSP with variable filter level for that reason.

Being able to tune the bandpass is also nice. This capability can be used to optimize the filtering for a particular voice and can improve readability under adverse conditions. I would recommend a DSP with continously variable bandpass filtering - if high and low bandpass can be set seperately, it is even better.

I have tried quite a few different DSPs, e.g. Radio Shack 40, Timewave 9, Timewave 9+, Timewave 59, W9GR DSP-3, JPS NIR-12 and The DanMike DSP-NIR. Of those, I like the NIR-12 and the Danmike DSP-NIR best.

The NIR-12 uses two DSPs. It is also the most powerful of the DSPs, I have tried. The negative points: the headphone socket is on the rear panel and the filter level switch is also there. I like to change the level depending on the type of QSO and my unit is mounted in a rack, so the level switch and the headphone are both unuseable.

The Danmike DSP-NIR is sold by Down East Microwave and is the most expensive of the DSPs. However, it also has a continuously variable filter setting and it also gives the best voice quality. It has an AGC which is particularly nice on FM signals and it has several fixed filters: HF packet, SSTV and RTTY.

If you only use the DSP for CW, you can probably get away with cheaper models - even the RS DSP works well here. However, for any wide bandwith operation (even scanning the band for CW stations), I would recommend either the NIR-12 or the Danmike DSP-NIR.

I hope my long-winded discourse helps. If you have specific questions, please send me an email to: erik_skovgaard@bc.sympatico.ca.

73 & Season's Greetings de VE7MDL ....Erik.

I am in the process of cleaning up a 51S-1 that is quite dirty. It's been 20 years since I've worked on one of these.

Now that I have the front panel off for cleaning and am cleaning up the dial mechanism area and chassis...

What is recommended about lubrication on the gears, chains, etc.???

They are quite noisy/"clattery" as I remember them always being but look in good shape and look very dry. Should any lubricant be put on gears and chains? If so what??

*** Remove XXX if you reply by e-mail which is best way to assure that I get your suggestions...***

THANKS!

Steve sezz:

> ...multi-millionaire CBer? Isn't that an oxymoron?

I have known several multi-millionaire CBers.
I designed a 2 x 8-element stacked array for one. He already had another 2 x 8-element stacked array on another tower, but it was vertically polarized, and he wanted a horizontally polarized one.

He may be one of the high bidders for time-share channels on the new 10meter Timeshare Band (TB).

New Breed of Outbanders Take Aim on 10 meter Band... capture by 2001.

With the New Year coming, and the century/millennium not far behind, it is a time for futuristic thinking, predictions, and prognostications. Not to be outdone by the petty debates currently raging, here is one prediction which is absolutely sure to come true, an event of fate!

The beginning of this sunspot cycle is bringing a new era of confusion to 11m. The proliferation of cheap wideband or 10m radios in the past few years has brought a boom in 11m activity to the rapidly expanding southern-hemisphere, tropical, and previously under-developed markets of the 2nd and 3rd world.

With this boom, good North-South propagation is now poised on the cusp of bringing never-before-experienced levels of interference to both hemispheres (since skip is reciprocal). This has led to increased crowding of the traditional 11m band. The "new" contingent of outband operators in far-flung areas of the world have little knowledge or respect for the traditional taboos of the 28MHz or other frequency limits. They are not "Classic American CBers". 10m and the world above 28MHz is so much quieter than 27MHz, that new outband operators around the world are squatting there, much to the consternation of ham operators.

This trend will continue unabated, and predictably will become a source of un-mitigatable frustration amongst hams. For many hams, the lower end of 10m (28.0-28.5) will be considered "The Lost Band" peaking and eventually conceded in mid-year 2001.

With the majority of people against Morse Code testing,
It is unlikely that it will last very much longer.

The old guard will eventually die off. Silent Keys really means silent keys.

The only question is: When?

The will of the people is heard eventually. Especially when it is the right thing to do. Many of us CW-lovers welcome abolishment of code requirements. It's the right thing to do now.

Abolishing the Morse requirement is the right thing to do.

5239. LOST: Generation of HF Operators

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-17 00:00:00 UTC
From: "Amor Powers, Radio" <power@radio.net>
Message-ID: <3498BD2E.54ED@radio.net>
Source record: 184315
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx,rec.radio.amateur.policy

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the experience of HF methods and technology, and the "mechanics" of an HF station and the "feel" for propagation and international DX contacts. The implications of this will not intirely be felt for another 15 to 20 years.

Amor Powers

5240. HAMs Active on 11 Meters

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-17 00:00:00 UTC
From: "Amor Powers, Radio" <power@radio.net>
Message-ID: <3498C0D3.273F@radio.net>
Source record: 184316
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,rec.radio.amateur.dx

There are a_lot_of_ham_operators who get on 11m from time to time.
You can occasionally identify the 11m hams by the
slight difference in terms, lingo, and culture clash. Hearing "you're
5-by-9-plus-10 and we're running 100 watts into a vertical" is a dead
giveaway.

The fact is, 11m is a fun and exciting band. 11m DX propagation is
instantly apparent. Pacific Islands, Africa, and many exotic countries,
rarely heard on other bands are regularly active on 11m. Tuning into
some 11m frequencies is better than the Beacon Network! Lots of contacts
via Es propagation. Meteor scatter is being worked on 27.385 LSB. The
huge simultaneous proliferation of SSB users (and mobile activity) from
all walks of life make it very interesting listening.

The intrigue of outbanding also fascinates some ham operators. It puts a
little bit of the fun and excitement back into operating. Many operators
are loathe to admit that they like to operate 11m to their fellow hams,
or even their therapist.

My youngest son is attending Radioman Class "A" School *right now*.
They are learning computers/operating systems/networking first, then
they will learn the radio/electronics ... at NO time will they be
learning Morse code ... than Navy doesn't USE it any more and
Radiomen are NOT taught it ...

That's the problem with ham radio and many hams ... they are stuck
in the past and have not kept up with today's world or its technology.

Hi.

The number of hams received a SPAM again from ADI communications.

This time, I should say it wasn't a spam advertisement, but the sender made a mistake by putting all the e-mail address on the e-mail list in "TO" field (not "BCC").

I see 1000s of e-mail addresses and I hope no one sends out the unsolicited e-mails by using this.

I hope nothing like this happens again !!!!!!!!!!!!!!!

Hi there
I bought a DSP-59+ thinking it would make the noise vanish on
SSB, worst mistake I ever made. It removes some noise but the audio gets
chopped a lot. In my opinion, a DSP is very good to remove heterodynes but
that's all it does. I got rid of my DSP, sold it to a ham who needed it for
cw, he loves it. Hope that helps.

73 Michel Morin.

ANY infrastructure???

Yeah, right. And you fabricate your own power transistor
finals in your basement.

And when a big lightning hit blows out the DSP on
your HF rig you can crank out another one of those too.

No problem. ;-)))

ok, i've understood everyone's responce, and it matchs what ive read on the subject.
but heres something that confuses me. a couple of days ago, i hand made a 1/4 wave out of copper wire and set it up in the back yard.(more like strung it up)
to check its match at first i tuned in a station some 10 or 15 miles away having a qso.
while listening in i made adjustments in the length, finding the strongest s-meter reading. but when i checked the swr on transmit it was over 2.
so, starting from scratch in the same location, same wire type, i cut a new length and tuned it to the swr reading getting a 1:1.2. BUT, the s-meter on the same distant station dropped 1 1/2 s units. all this was done on 11 meters, and the other station ive talked to didnt do anything on his side that would count for the difference.

any idea's on what caused this????????

There are a couple of possible explanations that come to mind. What do you think of these ideas?

(1) By adjusting the length of the antenna, you were also affecting its radiation pattern. Lengthening an antenna beyond 1/4 wave will increase its radiation at low angles, like you probably needed for a local contact on 11M. Recall that a 5/8 wave has optimum gain at low angles? You were moving somewhat toward that pattern.

(2) Perhaps your receiver input impedance, although nominally 50 ohm, was in fact other than 50 ohm resistive. Recall that optimum power transfer occurs for a conjugate match. If your receiver Zin was slightly reactive, then detuning the antenna for an equal and opposite reactance (at the receiver end of the transmission line) would improve signal strength.

I could probably come up with more, but the hour is late.

FWIW,

Blake - WB4PLL

Yes, if I am on the highway and there is a big traffic jam I turn on
my CB radio to listen to the truckers, to see where the trouble is and
how to get arround it. They (CBers) are on the spot. My ham radios
don't do me much good in that situation.

The future of Ham radio is UHF/Microwave freqs ... not HF bands. When P3D satellite goes up next year No Code Techs will have worldwide capability for long periods of time each day. The band will not have noise like HF does, will require low power, not high power amps like some HF bands, small antennas unlike HF bands.

I predict that once P3D becomes operational that most new hams will NOT desire to upgrade to the "old" HF bands. The ACTION will be on P3D.

I don't know what all the fuss is about.
I am a ham (Extra Class) and have a CB radio in my car and just bought
two FRS radios for use on family trips with my brother and mother who
have no desire to become a ham.

The survey in question only had 1,176 respondents and the majority of the
ARRL, own members admitted they rarely used Morse code,but a majority
approved of keeping the Morse Code requirements. The Reason is clearly
stated in QST and in numerous speeches either by inference or as a adendum
to policy by high ranking ARRL members and officers,it is to be used as a
filter to limit access to the frequencies below 30MHz. It is not a open
policy but if you read some of the position papers posted by the caniduates
for ARRL office it is clearly and openly stated in their policy statements.
You can argue with me about CW being a universal language and needed for
emergencies etc, but it all boils down to the fact there is a strong
dislike of the Technician class becasue they are pushing for change and to
a clearly established order, who chose to go along rather than rock the
boat this is intolerable. I have seen numerous post on here that clearly
justify eliminating the CODE REQUIREMENTS(notice I said code requirements
not the code) I don't call people names but the procode arugments have for
the most part either tried to humiliate or shame the other side or provoke
them into the very responses you mentioned due to their emotional rather
than logical content. Insults on both side accomplish nothing and if we
want to dicuss the issue in a constructive forum both sides need to refrain
from using profanilty and stop calling each other names. The code
requirements are the most divisive issue facing Amateur Radio today and it

is a issue that must be faced soon or Amateur Radio may never recover from it.

Hi Les, Do you know what it indicates when you want to pull someone's
license for exercising his First Ammendment rights? Dave did not do
anything illegal. Do you want to live in a country that punishes
citizens for what they say? If so, it's time for you to move to
one of those fascist/communist countries.

You know, I tend to agree with you on this one.

It is not so much the technology and mechanics as perhaps the art and craft or the tricks of the trade level of experience that the folks are missing. On hf, the variables can be considerably different than on vhf, and the tricks of the trade and the tolerances one can use or live with are much different. So much of that is becoming lost in time and practice, but it is still there in the OT rags and books if one takes the time to read it or ferret it out. Sadly, the practical rules de thumb of the thing (read the art and craft of it) are becoming lost in time. That is were many of the next generation will be having a hard way of it. Some call that progress......

5277. Re: MORE SWR QUESTIONS

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-18 00:00:00 UTC
From: tsum3drac@aol.com
Message-ID: <19971218203701.PAA13037@ladder02.news.aol.com>
Source record: 184190

<<If you cut the line correctly, then swr is mostly meaningless at HF>>

I guess I disagree with this statement. A numerical example will put my point into context. I will assume a 100 foot transmission line (because that's what I use at my shack) and operation on 15 meters (my favorite band).

From the ARRL Radio Amateurs Handbook, 1982 page 19-15, I find the loss of ideally matched RG58 at 21MHz to be 2.2 dB / 100'.

From Reference Data for Radio Engineers, Fifth Edition, page 22-10, Figure 8, I find the Standing Wave Loss Factor (which does "not include mismatch loss") to be 0.1 dB for a VSWR (at the load) of 1.5, 1 dB for a VSWR of 3.6, 3.5 dB for a VSWR of 10.

The above losses are related to the VSWR at the load end. Since most hams measure VSWR at the source end, I take from Figure 5, page 22-7 of Reference Data for Radio Engineers, relating Input VSWR to Output VSWR:

Load End Line Source End
VSWR Attenuation VSWR
1.3 2.3 dB 1.25
3.6 3.2 dB 1.55
10 5.7 dB 1.6

The upshot of this is that, at 15 Meters with a 100 ft long RG58 coax line, if you measure a VSWR of 1.6:1 at the transmitter end of your transmission line, there will be a transmission loss of 5.7 dB through that line. This is not meaningless.

This is in addition to the mismatch loss, which you may be able to minimize by use of an antenna tuner, tuning the length of your coax, or other impedance matching techniques.

If there is somthing awry with my analysis, please correct me. With supporting references, if you please.

Regards,

Blake - WB4PLL

5278. Kids Day Operating Event

Kid's Day Operating Event
Sponsored by the Boring Amateur Radio Club

1. Purpose: The Kid's Day Operating Event is intended to encourage activity by younger people (licensed or not) using Amateur Radio. The goal is give unlicensed young people some hands-on experience on-the-air, so they might develop an interest in pursuing a license in the future. It is also intended to give hams a chance to share their station with their children.

2. Dates: 3 January 1998 and 20 June 1998.

3. Time: 1800Z to 2400Z. No limit on operating time.

4. Suggested exchange: Name, age, location and favorite color. You are encouraged to work the same station again if either operator has changed. Call "CQ KIDS DAY".

5. Suggested Frequencies: 14270 to 14300 kHz and 7200 to 7250 kHz. Be sure to observe third party traffic restrictions when making DX QSOs.

6. Reporting: Logs, comments and funny stories may be posted via the internet to kids@contesting.com. You may review these postings by visiting http://www.contesting.com/kids/ with your web browser.

Those without internet access may forward their comments to the Boring Amateur Radio Club and they will be posted for them. A summary of the postings will also be sent with your participation certificate.

7. Awards: All participants are eligible to receive a colorful certificate. Send a 9 x 12 sized SASE to the Boring Amateur Radio Club; PO Box 1357; Boring, Oregon 97009.

8. More details may be obtained from the Boring Amateur Radio Club at the above address or at http://www.jzap.com/k7rat/.

I'm curious about how CW worked before the advent radio and ocillators, i.e. the telegraph. I have the impression that there was what amounted to a clicking relay on the receiving end. Was a dot two clicks close together and a dash two clicks further apart? Or was there some way to vary the length of a click or perhaps two types of click? Any of these would appear to have been harder to learn and use than an ocillator.

Mike

When numbers drop dramatically for HF hams, things will change
or ham bands will be lost. People are to busy and interested
in other things (internet) to deal with outdate code.

Some have suggested that the practitioners of CW are members of a
legitimized cult.
It is not a religion or cult.
It is a way of life!

It's true, I have found bliss and enlightenment through endless hours of
narrow filtered noise, pulsating with the bright bell-like chimes of
distant song. Originally, I found this path to my soul through
friendship and winter-night contact with another like-minded young
fresh-faced follower of truth, by the warm glow of the dials and glass
envelopes.
An old J-38 in the battery wire to a tiny crystal-controlled
transmitter.

How it chirped like a bird!
Then came the wiggling tail of the bug, as the dits flew by.
Music to my ears/Music of the spheres...

With the years, CW became second-nature. I found that I could listen to
a companion or other radio talk while I sent CW, carrying two levels of
conversation simultaneously like independent full duplex. What insight
into how the mind works! Mobile CW became a joy, when I learned to
drive, but only at speeds below 30WPM. Higher than that, and I would
surely lose control of either the vehicle or the DX contact! The power
of CW, the mode itself! How my 100Watts bounced around the globe, where
AM or even SSB would never go.

I will follow you, CW wherever you may take me.
Walk in the noise!
Rise above it!

The feeling is deep and warm and safe, and the mind is free.
This is why I cling to CW... lo, these many years.
This is why I must make my constant pilgrimage to the altar of the
keyer.

Those luminescent twin paddles balanced on glistening chrome!
They sing like a harp with my touch.
The joy!

I have heard the sound of one hand clapping!

Dave, KF4HMN said:

> The code requirements are the most divisive issue facing Amateur
> Radio today and it is a issue that must be faced soon or Amateur
> Radio may never recover from it.

Dave,

"The voice communicating amateur will not displace the Morse code-communicating amateur; he is simply another branch, and a growing branch, of the same institution. Unfortunately, civilization does not always progress in accordance with idealized social trends. Mundane considerations enter. In amateur radio, such considerations, applied particularly to the operating territory available in the radio spectrum, have produced jealousies, conflict -- open competition and warfare -- between the two classes. The dictates of fundamental psychologies are involved. Each group is prone to regard the activities of the other as somewhat inane, pointless, unsatisfactory. A few individuals combine the attributes of both sides, but these are merely the exceptions that prove the general rule of divided mental traits. The eventual preservation of amateur radio depends upon the coalescing of these characteristics -- a short-term period of social evolution peculiar to amateur radio, at the end of which the objective of the CW amateur will converge with those of the phone amateur, as have those of the experimenter and the communication amateurin the past."

The words above were published in 1936, over 60 YEARS AGO!

Can we move the policy discussion on to some 1990's issues now?
(Like how will we *ALL* work to defend our frequency allocations?)

73, de Hans, K0HB

Exactly the point! It seems that some people just cannot stand for others to be happy, and share that happiness with others. They are miserable, and they want to bring everyone else down to their level.

These people are also good at twisting the constitution to justify their opinions. The constitution is designed to protect the minority from abuse, it is not there to protect the minority from everything they don't like about the majority.

The freedom of religion amendment does protect minority religions, but it does not protect members of those religions from the practices of other religions (because those religions are protected also).

While Christianity is the majority religion in this Country, and Christians celebrate Christmas, there is nothing in the constitution that protects members of other religions from Christmas.

This is especially true when you consider that Christmas is mainly celebrated as a secular holiday in this Country - the majority who celebrate Christmas are not even Christians.

With all this in mind, the people who would criticize those who wish others a "Merry Christmas" simple have no ligitimate grounds to base that criticism on (other than their own perversion of this holiday).

REPLY...

My father was in the Navy, as a radio operator, for ten years. But, after a problem with sea sickness, he transferred to the Air Force.

As I understand it, his Navy speciality could only be done on a ship. Since he had sea sickness, he could not serve on a ship, and hince could not do his job.

But he could do the same job in the Air Force, since they had a similar job on land. The Navy therefore helped to arrange a transfer to the Air Force (they actually did that back in those days).

He really loved the Navy. I don't think he ever liked the Air Force as well. He was really proud when I picked radio operator as a job in the Army (even though he really wanted me to go into the Navy).

Since I've always been interested in electronics, and radio, I guess some of the old man rubbed off on me after all.

He died several years ago. But every so often, when I am sitting at a desk playing with a radio, or piece of electronics, I think back to when I was a kid watching my father doing the very same thing.

I wonder if he ever knew how much he impressed me when I was a kid. I try to think of that whenever I have the opportunity to show some kid today this fantastic hobby.

As I understand it, when the FCC decides to give us a license it is based upon the idea that we will faithfully follow the rules. But when an individual basically invites others to openly violate the rules/law, how could that individual be trusted with a license? That has nothing to do with free speech. Inciting a riot is against the law. telling people to overthrow their government is against the law. i could cite numerous cases where Free Speech does not protect everything you say. You can not yell FIRE in a theater if there is no fire. You can not joke about hijacking an airplane ... etc.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z DECEMBER 1997 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 18 DECEMBER AND FORECAST FOR 19 DECEMBER - 21 DECEMBER
STATUS INDICATORS SOL:GREEN MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 18 Dec: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 18 Dec: 86/29

GOES satellite data for 17 Dec
Daily Proton Fluence >1 MeV: 1.7E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 5.00E+06 (normal)
X-ray background: 7.5E-08
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Dec 20 Dec 21 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Dec: 84/26

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 18 Dec: Quiet

Estimated Indices 18 Dec : A K
Learmonth 4 2221 1111
Fredericksburg 7
Planetary 6

Observed Indices 17 Dec : A K
Fredericksburg 4
Planetary 3 1011 1112

2B. MAGNETIC FORECAST
Date Ap Conditions
19 Dec 10 Quiet to unsettled
20 Dec 12 Quiet to unsettled
21 Dec 13 Unsettled
COMMENT: A mild increase in geomagnetic activity is expected

during interval 21-24 December due to a coronal hole. Isolated
active periods may be experienced during this interval.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
18 Dec Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
19 Dec Normal Normal Fair
20 Dec Normal Normal Fair
21 Dec Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
18 Dec 40

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for December: 41

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
19 Dec 50 near predicted monthly values
20 Dec 40 near predicted monthly values
21 Dec 30 near predicted monthly values/depressed 10 to
15%
COMMENT: A mild increase in geomagnetic activity is expected
21-24 Dec. This may cause brief mild depressions for southern
region after local dawn, during this interval.

:
: The latter is where we are now.

If we go by that, then the only reason a lot of people don't rape, steal, kill, etc.... is because it is "against the rules." A lot of people tend to ignore those rules, and many of them are held liable for their actions and damages.

But changing the rules to accomodate present and would-be criminals isn't exactly a good idea....

What does a society normally do about ignorance of regulations? In my mind i picture an old western, where the people look for a new sheriff to "clean up this towne." What we need is more self-policing, more FCC intervention for rule-violators, but not necessarily a change in the current rules and/or policies.

I think you mean obnoxious.
Well, then, sine you put it that way, i hereby revoke and direct toward
myself any comment of "good will" ever uttered in your direction.

Since, in your post, you mention it is an example of good will by you
toward others, I thank you for your gesture.

As for me, I don't give a flying flip who wishes me what in whichever
religion, as long as it's good, and it makes me happy that others are
enjoying whatever it is they enjoy. If you don't have the common decency
to accept that someone is happy for whatever reason and go on with your
life, affected or not, you've got a rough and newsgroup-post-filled life
ahead of you.

I'd say "good day" but i'm not sure if that would be a gesture of good
will or not.

: else to do so ...

That's not my intent. My intent is to enjoy it myself, and to try to get
people to see that people like me dont usually "die off" at age 21...

: > Hey, if you don't enjoy code, let others.
: > There will always be those who live the code...
:
: FB OM ... practice what you preach (Let those who don't enjoy code do
: other things without the stupid, outdated hazing ritual. Nobody is
: trying to keep you from beeping ... where do you get off insisting that
: nobody else should be able to use the HF bands for other things if they
: aren't interested in beeping???)

HAZING? that's plain BS. It's part of the rules and regs set by the FCC,
And before I was a ham i hated code too... In fact, I was a no-code for
about 4 years. The want to learn code and the advantage of new bands drove
me to upgrade...

: BTW, I've been a licensed ham longer than you've been alive and an RF
: engineering professional for longer than that ... I believe I may know
: just a *tad* more about radio than you, so please don't try to sell *me*
: that "CW gets through when nothing else will" crap.
:

Admitted the experience factor, you're probably right. Ham radio is a lot
about learning, and that i've done right before your eyes. But it gets
through much better than SSB and the like at times... ;-> that was my
intent anyhow---

I did pass my code test without any problem but the clear fact is that
it is stopping the progress of ham radio. If people like code no one
will ever stop them from using it. The wrong part is forcing people who
has no interest in morse code to learn it for an exam and nothing else
because if you do not like it you will not use it.LOST TIME AND EFFORT.
In the meantime the ARRL will complain that we are loosing the allocated
spectrum. WE
NEED TO BE A GROWING GROUP AND AS SUCH WILL HAVE DIVERSE
INTERESTS. HAM RADIO REGRETFULLY MAY BE THE VICTIM IN THE END

Nobody is "keeping the hf bands all to themselves".
The hf bands are open to anyone who can get a license to operate there.
The tests are a give a way these days . Any adult ought to be ashamed
to be caught complaining about the present day exams. Shame on you
all !

Best Regards , Larr

Dang Joe, I'm really sorry because I feel exactly the same way. Code will never go away even if the code test is eliminated. Code will live as long as I do, and as long as there are hams who appreciate the elegance of uncomplicated modes, unpolluted mountain streams, sunrises without air pollution, and virgin forests. CW has a life of its own. Now Morse code testing is another matter altogether.

In my mind there seems to be a very simple
solution to this ongoing "code / no code" controversy: "Specialized
Testing."

It's quite basic...if you want a voice mode privilege you test for it.
If you want to include the cw privilege you test for it. If you want a
packet or other digital mode(s) privilege you test for it...and so on,
the idea being that you will have demonstrated your knowledge in the
modes that you'll be using.

The same principles should govern spectrum and power parameters.
Everyone should be entitled to use, let's say 100 watts, unless they can
satisfactorily demonstrate their technical knowledge to responsibly
handle higher levels.
Basically, the more you learn...the more you earn! That seems fair and
very practical to me!

Of course, I'm advocating what would amount to a total restructuring of
the examinations and licensing process (i.e. License Endorsements)...
something that would never fly down at ARRL Headquarters!

Thank You / 73,

Ron Pelleteri / AA1IT

My comments were WRT "ham radio in general and many hams" ... I was NOT
ASSuming that you were a rabid beeper, simply commenting on the general
state of affairs.

> It is true that I had to copy code at 24 WPM to graduate. It is also
> true that I experienced Navy communications going from CW on a hand key
> for sending traffic to a 600 WPM packet system. I was in for 20 years.

Thanks for your service to the country. I hope that you understand that
my comments were not intended to insult, offend, or disparage you or that
service in any way. I simply stated (1) the Navy is no longer teaching
Morse to radiomen because it is not using Morse and (2) too many hams have
stagnated in the past. If you interpreted my comments as an attack on you,
I assure you that they were not intended in that vein.

>minimum SWR. I'll bet you've heard that one before.

Yes, power is maximum when power is maximum. But do we tune our antennas for maximum (transmitter output) power? I don't think so.

On reflection, though, I also think he was refering to maximizing field strength, or possibly maximum directivity, which does make sense, as long as the VSWR remains within reason. It was the use of the term "forward power" that made the comment sound so strange.

REPLY...

And when I was in the Army's radio school in the early 70's, I had to learn code also (Radio Relay Operator, 31M, Ft. Gordon, GA).

But today, that MOS, and the code requirement, are gone. Today, the closest MOS (military occupational speciality) uses computers, digital communications, and satellites. Morse code (CW) is not even discussed (even in a historical context).

It is clear that VHF/UHF communications (and higher) is the future. Years ago, the amateur radio service was formed to provide a base of trained radio operators. At that time, that meant HF operators.

Today, that purpose is still there (trained operators). But today, that means VHF/UHF operators. The FCC has recognized that fact. And when it became clear that they could not rely on HF amateur operators to fully develop VHF/UHF, they decided to attract new operators with the no-code technician license.

And, to insure that those new operators fully used VHF/UHF, they opened up the entire VHF/UHF frequencies to those new operators, without restriction (no special priviliges based on license class). Perhaps that alone demonstrates how valuable these new operators are to the FCC.

Dwight Stewart (KF4URZ)

Source record: 184239

Webcor Regent Coronet Stereo Tube Model #2380-1 reel to reel.
Made in Chicago. Excellent running top-end three speed tube unit
from late 1950's or early 60's with extra features. Has separate
optional Webcor compact mini-suitcase speakers that fold into
little suitcase. Handles 7 inch reels. Has top-end options for
its time. Weighs about 38 lbs by itself. No mikes, missing
small piece of cover plate on bottom about 2"x 3" for access
(Just screw in any plate to cover if you wish), have SAMS
photofacts manual for unit. $100 plus UPS Shipping. Will pack
it free.

Have photos if you wish me to email them to you. Must see.

Will consider trades all or in part for Civilian or Military
tube tester as well -- or guitar or bass amp.

Amor Powers, Radio (power@radio.net) wrote:
: With the majority of people against Morse Code testing,

This is untrue.

: It is unlikely that it will last very muchlonger. :

Morse code is as fundamental to amateur radio as an antenna. It's one of the simplest forms of communication and can be used when no other methods work. No, I don't see it dwindling away anytime soon.

: The old guard will eventually die off. Silent Keys really means silent :
: keys.

I doubt that, since I've just turned 21 and I happen to like code, as well as most other members in the radio club here at michigan tech.

: The only question is: When? :

Probably a few millenia, when the earth is destroyed, and everything else dies off as well... ;->

: The will of the
: people is heard eventually. Especially when it is the right thing to do.

If the will of the people is to get a license and use it to locate the family and coordinate life after work, what you need is FRS. I'm against that new service in general, but its the closest thing to what you need. I'm not even sure why you are complaining. Now there are two different bands ANYONE can work without becoming a ham, so why all of a sudden should we downgrade the rules for everyone when it has worked for years? Surprise, but phone communications methods have existed for years.

It's similar to forcing a strictly-one-gendered-organization (maybe like boy scouts) to completely change their image because one little girl in california didn't like girl scouts and wanted to join boy scouts. so they let her. Removing the code requirement would be like altering the image of radio, similar to changing the name of the boy scouts to "people scouts."

: Many of us CW-lovers welcome abolishment of code requirements. It's the
: right thing to do now. :

Exactly, there are even provisions so that ANYONE can pass the code. It shouldn't be a problem, and if you hate doing it, tough rocks, everyone does stuff they dont wanna do. ;->

: Abolishing the Morse requirement is the right thing to do.

Hey, if you don't enjoy code, let others.
There will always be those who live the code...

Masa;

You seem to have forgotten (already) the incident with the technician and technician power levels on your web page about a month ago.

To summarize;

You had made the posting concerning the power levels. I suggested you visit either the FCC or ARRL web pages to obtain the correct power levels. Nothing was done. A few days later, I posted the correct power levels for you and your answer was "ok" and still no correction was made. You then posted that you had made the original post and received no replies (when in fact you had). Again, the suggestion to visit the ARRL or FCC web sites and get the correct power levels. Finally, after nearly a month, the page was changed.

> "Don't make me stupid. I know
>>what I am talking about."

This one's easy... It's a direct quote from several of your postings (or have you forgotten?).

I think the majority have given up on the idea of the ARRL and the FCC doing the right thing. Witness the sharp increase in the number of bootleggers on 10m.

People are going to use these frequencies. Period. Attempting to keep them out by imposing illogical and outdated requirements is only going to cause them to write off the whole idea of becoming a licensed ham and they will use the frequencies illegally instead.

"Amor:"

This "generation" of HF operators we're "losing" is of no potential
value to the ARS if all they're going to do is whine about the code
test requirements and not apply themselves to accepting the
challenge. The use of Morse code is an invaluable skill for amateur
radio operators; the requirement is current, valid, and essential.
If you and this "lost generation" don't understand that, then you're
no "loss" at all!

Ridiculous in the extreme, What percentage of hams use Morse code above 30MHz? What percentage of hams use antennas above 30MHz? Morse code is fundamental to amateur radio *history*. What percentage of ham radios have antennas? What percentage of all ham antennas are ever used for Morse code? Including *all* ham antennas, maybe 1%. I'm a CW enthusiast but only one out of my 15 antennas are ever used for CW.

Noisey receiver plus factory alignment is poor...power out was set to 90 watts and carrier set point could have been better..lcd has poor off angle viewing and the adjustments don't really help either sort of washed out or kinda bleeding dark, weird. If you decide to remove top cover watch out for exposed ribbon cable or you will surely cut it and they don't have any of these critters at ICOM USA must come Jay-Pan. Noise blanker does little or nothing and also needs tweaking to be useful. DSP is OK but only at low settings other wise your under water. Back panel connectors aren't marked except for the tiny ICOM label in the center(cheap). The really only thing good about this rig is it is slightly better than IC-706 MKII.

Do yourself a favor and stay away from this mass market type rig(lots of bells and whistles) but no guts. It is over priced and sucks bad. Find a Kenwood TS850SAT and buy it they are about 1100.00 bucks or so on the used market and the receiver is far better so is just about everything else and if you plan to use for CW buy the Kenwood you'll be much happier

Hi Larry, my friend with the commercial radio license, 20 years experience as an AM broadcast engineer, a EE degree, RF chip design experience, and a code waiver is living proof that your statement is false. He's one of the most knowledgeable hams I know and he never uses Morse code. At any hamfest, you will find a large group of hams gathered around him, partaking of his antenna expertise. My two antenna web pages are the result of his Elmering.

5356. Ham radio and computers

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-18 00:00:00 UTC
From: kenk@primenet.com
Message-ID: <67bk7p$jsg@nntp02.primenet.com>
Source record: 184269

Firtst of all, I hope this works. I just started using a new newsreader.

I'm just getting active again in ham radio after twenty years. Anyhow, what is available - briefly - for using a computer with the radio? And is it really practical? I see quite a lot of posts concerning interference problems. That is my main concern.

I'm considering perhaps CW software to read and send via keyboard, logging, and maybe filtering like DSP.

Thanks.

Ken

> not minimum SWR. They do not (always) occurr at the same tuning point.

Kudos Rich....

You know, you have hit the nail on the head. It is a forgotten pearl
from the past (like dating from the spark era when my OM used the method).
My OM used that method for some 75 years in radio, and I have been using
it for some 30 years, with great success.

In my book one should usually always tune an antenna for maximum power
output on a FS meter. Works fine for me. I rarely have need to use
something like an SWR meter. I find SWR mostly meaningless on proper
tuned antenna systems and feedlines. If you have high swr and your
antenna is any good, then that indicates your feedline is the wrong
electrical length, or your coupling into the line is wrong. Fix that
and tune for max output and throw the silly swr meter out the door.
The only time an swr meter might be of use is in the first initial
setup of the system where you may have many variables to set up the
first time around. After that, throw the SWR meter away and read
the FS meter.

As an example: 1. Tune the rig into a dummy load for proper power and
loading.

2. Switch to the antenna line and tune for resonance and
max output on the FS meter.

That should match any proper line setup quite well, anytime.
Peaking the ``tuner'' on the incoming signal will usually also
be close enough to resonance to be a good starting point.
(Modern untuned transmitters are a bit of a problem, since they
are usually less tolerant of impedance mismatches.)

If it doesn't match, then you have some odd impedances and need to think
about what impedance transformations you are needing to or trying to
make into the line system. Most of the usual antenna ``tuners''
these days are not really antenna tuners at all, but merely line
transformers that trick the rig into thinking it is tuned. The modern
transmitters with untuned outputs have been designed that way as cost
cutters to let the ``antenna tuner'' do the matching instead.
A properly set up line will not require a tuner at all, in which
case the line transformer ``tuner'' is merely a passband or lowpass
filter in disguise. The usual culprit I have found recently is
the improper choice of line length for a given antenna system.

Folks seem to think they can use any length of coax anytime.
(One can, but one needs to think of what the impedances will be
like for any odd length of line and adjust accordingly.) A line
transformer tuner is only a crutch for a poor original system.
A poor system is better than none, and often only what a ham can
afford or put up, and I don't fault that at all. But, with some
thought, one can usually make a more optimal system right from
the start and not have to rely on the tuner crutch and swr madness.

I sometimes get the feeling that there are many folks in hamdom
that seem to have forgotten practically, as well as theoretically
how to make an antenna system and make it practically work. I sense
it is not emphasized anymore in novice classes and the like.
The olde pfarts amongst us need to elmer them along to fill in
the gaps, especially when it comes to tricks of the trade.

Gee, old forgotten spark/vacuum tube era radio practices like proper
tuning of antennas and feedlines, ...food for thought.....

If you cut the line correctly, then swr is mostly meaningless at HF.
If you use things like open wire line, then swr is meaningless all the
time. Max output coincides closely with minimum swr most of the time
when correct line length is used. For example, I would never want to
use a 1/4 wave line of coax into a dipole. A half wave is the line of
choice. Using open wire line and resonant tuning, it does not matter
if you use a 1/4 wave or a half wave (provided your resonance device
AKA tuner or whatever can handle the impedances and voltages generated).

With CW and HF Amateur activity dwindling, isn't it about time we stop giving Special Rights to CW at the expense of voice modes?

Special Rights should no longer be needed! Once assimilated into the bands homogeneously, CW will be able to get through the QRM just fine, since it is such a "Superior Mode". Our sovereign rights in the USA to the international DX phone territory have been denied us for too long. We burn for the freedom already enjoyed by other hams of the world.

Equality, parity, and total integration for all modes!

Greetings Friends,

You are welcome to download an improved "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

Version 0.2.1.6 -
Add code to save beacon "Active" status. Also provide default set in case file is missing.

Add code to save, allow delete and add of time servers and currently selected server. The time servers are saved to a standard text file. A default set of servers is provided in case the file is not available.

Add code to save and restore window position. Also provide minimize button.

Improved the time setting feature.

It is a win95 applet. Happy Holidays.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

: mouth is.

Actually, it wouldn't be all that bad. More self-policing would be an easy way. I know of a great many people who have verified who was jamming who, have them on video doing it, have submitted to the FCC, and yet nothing was done. This type of response doesn't exactly make people want to self-police too much. If they would simply issue a citation as a first warning, and a fine as a second, and conviscation of radio gear as a third, or differently depending on the severity of the maliciousness, it wouldn't cost all that much more. Actually, I bet once they collected on a few more fines, they'd start to like the idea...

The content of your posting is irrelevant to the content of my posting.
Please don't try to put words in my mouth. Les wanted to *revoke an individual's
legal license* when that person had *not* broken any law. That's completely
different from the peer pressure you are talking about. Les advocates using the
force of the federal government to punish a person innocent of any crime. Those
are two completely different subjects. If you and Les want to make it a crime
to "hope for bootleggers on 10m" then talk Bill into an Executive Order. And
by all means, bring peer pressure to bear upon anyone who "hopes for bootleggers
on 10m". All I'm saying is, if it is not against any law or governmental rule,
free speech rules and the federal government has no business being involved at all.

Translation of Hans' comments: "We beepers at the ARRL want to keep
the HF bands all to ourselves and maintain the artificial "status"
that having passed a Morse code test presently conveys, so please
stop trying to change things and let us have our way, even though we
are a distinct minority."

That is one of the most absurd statements I've EVER heard ...

> It's one of
> the simplest forms of communication and can be used when no other methods
> work.

You mean "no other methods that you understand" right? Many of us know
of MANY methods that would work long past the point when Morse code ceased
to be even detectable to the human ear through the noise.

> : The old guard will eventually die off. Silent Keys really means silent :

Fine, enjoy it if *you* do ... just don't keep trying to force everyone
else to do so ...

> Hey, if you don't enjoy code, let others.
> There will always be those who live the code...

FB OM ... practice what you preach (Let those who don't enjoy code do
other things without the stupid, outdated hazing ritual. Nobody is
trying to keep you from beeping ... where do you get off insisting that
nobody else should be able to use the HF bands for other things if they
aren't interested in beeping???)

BTW, I've been a licensed ham longer than you've been alive and an RF
engineering professional for longer than that ... I believe I may know
just a *tad* more about radio than you, so please don't try to sell *me*
that "CW gets through when nothing else will" crap.

5377. Suggestion: License Structure

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-19 00:00:00 UTC
From: slime@radiotelephone.net.ham
Message-ID: <3499c94d.2027724@news.total.net>
Source record: 184083
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur

I came up the suggestion for the Canada's licensing system,
considering current license structure and others' suggestions:

Basic Above 28 MHz 250W input, no CW
Intermediate <8 MHz, >20 MHz 1000W input, no CW
Advanced All bands 1500W input
(Intermediate + 5WPM)

Call signs: All of new Advanced license holders are permitted to use
2 letter call signs. Others must use 3 (except the ones already
issued).

Current holder of Basic: Basic
Current holder of Advanced: Intermediate
Current holder of 5WPM: Advanced
Current holder of 12WPM: Advanced

This suggestion does not eliminate the morse code requirement
entirely. Also it respects the conditions of current license holder.
To respect CW, CW mode shall not be used except the licensee of
Advanced (Intermediate + 5 WPM), this includes the VHF repeater.

Please let us know if you have any other suggestions for new licensing
system that takes all of our voices in account.

>"Where's that big 'ol CB RAMBO??"
> "I wanna hear him TALK TOUGH!!"

I would not sell this new ARRL Diirector short. His name is Joseph Falcone; call sign N8TI and he is an attorney. Also, he means business and means it in the same way as did the late Joseph Merdler N6AHU. For those of you unaware, Merdler was personally responsible for getting the licenses of some 16 foul mouthed hams and jammers "removed" fdrom the air by the FCC.

I knew Joe Merdler quite well for the better part of 22 years. I was with him when he turned on the radio in his car with his pre-teen daughter seated next to him and a string of utter profanity sprang forth from the speaker. He always had told Marci how great ham radio was, and it was more than embarrasing to urn it on and have filth come across as a demo. Joe vowed that the filth mongers would be taken off the air in Los Angeles. He succeeded in taking them off the air nationwide.

My friend Phil Thomas W8RMJ did an extensive interview with N8TI that I have a copy of. I used excerpts from it on Newsline a few weeks back. In his words, Joe Falcone is very similar to Merdler -- except he is seated on the ARRL BoD where he has a greather chance to influence national policy. He is very driven -- as was Merdler -- and it is people that have an end goal in mind who are the most successful in any endevour. If I were a foul-mouth or other HF rules violator, I would not want Joe Falcone as my enemy. He is not the kind that will give up.

It is very easy to sit back at a keyboard or in front of a microphone and predict failure. Lots of people did that with Merdler when he began his campaign. When he traveled to Washington in 1980 and returned with a copy of the cancelled license of a rather notorious ham

in his hands, and waved it like a flag at the 1979 ARRL Southwerstern Division Convention -- all the sudden people began to listen. They began to ask questions -- and to follow his lead. The result was another 15 licenses gone before he suffered his first heart attack in 1983 and forced to retire from practice.

So do not say that it cannot be done. If one man -- Joe Merdler N6AHU -- could do it outside of the ARRL and force the ARRL, FCC and Congress to recognize that a problem existed, then a person as Joe Falcone N8TI -- with far more political clout and the same vision will do even more. I know he will.

Sorry Walt, but the use of amateur radio is not so
narrowly defined as you suggest. If you ever visit
the northern New Jersey area, tune in to the 147.895
repeater during drive time and you'll be able to participate
and listen to the daily highway net at 20 minute intervals,
usually starting at 7am to 8:20 or 8:40am and again
in the afternoon from 4pm to 6pm.

The net has helped me avoid several major traffic jams
over the years.

Message-ID: <3499E7CE.536557C9@muenster.de>
Source record: 184091

Hi,

I just wondered what the best way of learning CW with an electronic keyer is. I used a straight key for more than ten years, and a while ago, I happened to acquire a paddle, and my TRX has a built-in keyer. So I wanted to give it a try... but my first tries were not were successful... ;-))
So any hints for the switch to an elec. keyer? Is it possible to key a straight key after that... or do I have to forget my former "knowledge"? Should I try all letters/figures from the beginning or start with only a few (like "normal" learning CW)?

Pse send me a copy of your answer as an email since I do not read this group regularly.

Good point Les. I wrote an Op-Ed piece for CQ VHF about a year ago on why we need 2 meter management apart from the Repeater coordinators. We are losing simplex freqs as well .....I gave a first hand account of being moved by a repeater!

At least ARRL is paying lip service to band plans (not only for 2 meters but HF as well).

That was a different time. Today, nobody cares. Our sick society no longer differentiates between right and wrong. Do what you want and the hell with everyone else. Not too long ago, attempts to change a bad operator's behavior would result in improvement and a sincere "thank you" from the offending party. Now, you're likely to either get sued or shot for your trouble.

I wish him luck. It's about time the ARRL took the bull by the horns,
so to speak, and started leading the way in the ham tradition of being
self-regulating. If we continue to sit back and wait for the FCC do
all our work for us, we're bound to fail.

You might be even more surprised to know how many ops routinely check the data base for license class of every station worked, or calling cq, etc.

So I gather that you disapprove of the self-policing tradition in ham radio? Radio anarchy already exists on 11m and several spots in the amatuer bands, too. Is that not enuff to satisfy you? And, why do you even bother with a call sign yourself?

If you want to try a paddle key without building anything my morse tutor
program accepts a key (straight or paddle) connected to a com port on
your PC. The program provides side tone to the internal speaker or a
sound card if one is fitted. Iambic keying is provided. It decodes your
morse and you can see how good (or bad!) your code is.
It's called DMORSE and you can get it free from:

"http://www.kay-dee.co.uk"

This program also teaches the code. A read only version is called
RMORSE.

Good luck.

csanchez@coqui.net

Seï¿½or Sanchez:

The code test is not "stopping the progress of ham radio." Non-
progressing "hams" are! It's not the code that defines a lack of
progress, since most of the truly "progressive" hams (I like to think
of myself as one of them" are all supporters of the code testing
requirement.

If anyone is being kept out of the ARS by the code requirements,
that is their choice. The Amateur Radio Service is a VOLUNTARY
activity. The ARS does not need unrestricted growth in order to
survive. Maintaining the status quo would do nicely. Our total
numbers could even drop significantly without creating a situation
which would seriously threaten our spectrum allocations, as long
as the same levels of on-the-air activity persisted, which they
certainly would.

"Once you've been HADD...you've been had"! "Catchy slogan, great idea, oh yea - we really need something like that"...

When I first presented the idea of this voluntary organization to some local hams, they seemed interested. Everyone was willing to help...everyone had a good idea...UNTIL it came time to produce. Then, no one was anywhere to be found!

It really discourages me, the vast resources available to the ham community...and there is rarely anything contributory done with them. Aside from the traffic nets and the many organizations that stand ready during times of disaster (which is not very ofter), what do we, as hams, really offer the community?

Perhaps I'm expecting too much...or else I am just more community - minded than most. "Hams Against Drunk Drivers" is not dead...just regrouping for a major media blitz! Anyone have any CONSTRUCTIVE ideas?

Thanks,

Ron Pelleteri / AA1IT

Well it was based upon spacing and spaces were integral parts of the characters in American morse. The sounders emitted a ringing clank at each character element and the timing and differentiation of the elements determined what the character was. Your ear picks it up easily once it becomes used to the sound. Because of the ringing of the sounder board, you really did not hear a heavy double clank as it made and returned stroke. There were many different ``morse code'' alphabets in use (Morse and Vail had about 8 that they designed but only one survived). The American morse and the continental morse are the ones most common, and the continental morse survived into the spark and radio era, while the others stayed on landline circuits.

If you ever find a sounder, you can take and make your radio run it via a simple keying circuit off the audio line. It will get rid of the QRM/QRN, quite effectively when set up properly. Most were 6 volt coils.

The sounder was a simple relay like design but built with heavy brass plates and arms and a wooden sounding board to emphasize the tone and increase audibility. A simple heavy old AC primary contactor relay run on 24-36 volts will emulate it fairly well, especially if you mount the relay on a resonating board of some sort.

If you want to see Alfred Vail's original 1849 treatise on Morse's (and his) work, ftp://piobaire.mines.uidaho.edu/pub/Glowbugs/Historical for a modern postscript reprint of that work.

Good Luck, and Happy Holidays

Source record: 184127

I hope that the DEMANDS for morsecode when operating on the shortwave
extingish soon, but that it also is possible to use it if desired.
I recall that morse is a demand if distress-signals etc occur ? (ITU)
Today we can do it with DSP !
And of course someone might say that a good trained human-ear is far beyond
the power of electronic-dsp, well it must be judged by experts at DSP.

5422. Repeater Linking via Iphone or NetMeeting

Just curious if there is anyone one out there who might be interested in doing some repeater linking using the Internet. I currently have a repeater connected to Iphone using RptrLink but am looking to do a 24 x 7 connection with another repeater or network of repeaters. If anyone is interested in doing this, please contact me.

What is causing this alleged loss? There have been no new barriers raised to HF access in this generation. In fact, within the current generation there have been significant initiatives to *increase* HF access, such as Novice Enhancement, and HF privs for Technician+ licensees.

Some have suggested that the practitioners of CW are members of a
legitimized cult.
It is not a religion or cult.
It is a way of life!

It's true, I have found bliss and enlightenment through endless hours of
narrow filtered noise, pulsating with the bright bell-like chimes of
distant song. Originally, I found this path to my soul through
friendship and winter-night contact with another like-minded young
fresh-faced follower of truth, by the warm glow of the dials and glass
envelopes.
An old J-38 in the battery wire to a tiny crystal-controlled
transmitter.

How it chirped like a bird!
Then came the wiggling tail of the bug, as the dits flew by.
Music to my ears/Music of the spheres...

With the years, CW became second-nature. I found that I could listen to
a companion or other radio talk while I sent CW, carrying two levels of
conversation simultaneously like independent full duplex. What insight
into how the mind works! Mobile CW became a joy, when I learned to
drive, but only at speeds below 30WPM. Higher than that, and I would
surely lose control of either the vehicle or the DX contact! The power
of CW, the mode itself! How my 100Watts bounced around the globe, where
AM or even SSB would never go.

I will follow you, CW wherever you may take me.
Walk in the noise!
Rise above it!

The feeling is deep and warm and safe, and the mind is free.
This is why I cling to CW... lo, these many years.
This is why I must make my constant pilgrimage to the altar of the
keyer.

Those luminescent twin paddles balanced on glistening chrome!
They sing like a harp with my touch.
The joy!

I have heard the sound of one hand clapping!

With CW and HF Amateur activity dwindling, isn't it about time we stop giving Special Rights to CW at the expense of voice modes?

Special Rights should no longer be needed! Once assimilated into the bands homogeneously, CW will be able to get through the QRM just fine, since it is such a "Superior Mode". Our sovereign rights in the USA to the international DX phone territory have been denied us for too long. We burn for the freedom already enjoyed by other hams of the world.

Equality, parity, and total integration for all modes!

There is a very simple solution on VHF/UHF to about 90% of the incursions by FM into traditionally non-FM operating areas. Simply petition the FCC to restrict all FM operations to the same subbands where-in repeaters operate, and to those frequencies/channels nationally accepted as FM simplex channels. Do that and also announce it widely via the ham media (magazines, subscription newsletters, news bulletins, etc) and -- as I said, at least 90% of the problem would go away.

Spark is no longer used only because the bandwidth of the signal it
generated interfered with other services. Knowing hams, if there was a
way to legally go back to it and use it again, many would.

>activity.

And one that uses publicly-owned radio frequency spectrum. Since there is no longer a compelling public interest in requiring operators to know Morse code, the requirement has no business being imposed by the government as a condition of using the public airwaves.

Ultimately, this issue will wind up in federal court where it will be challenged on these very grounds.

5458. Excellent Alinco DJ580-T and accessories for sale

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-19 00:00:00 UTC
From: wd4sgu@juno.com
Message-ID: <882571066.1288503304@dejanews.com>
Source record: 184164
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

For Sale:

Alinco DJ-580T dual-band handheld in excellent condition (a 9+ out of 10) with original box, manual, antenna, NiCad battery, and wall charger.

The radio covers the following frequencies:
AM aircraft 110-143mhz
VHF ham & Public Service 130-174mhz
UHF ham & Public Service 420-480mhz
and full cellular/etc. 800/900mhz

Mars/CAP tx is also enabled.

Full accessory package includes two extra standard batteries (EBP-20N), soft case (ESC-17), remote-control speaker/microphone (EMS-8Z), dry-cell battery case (EDH-11), and drop-in quick charger (EDC-34). This charger operates from a wall transformer (included) or a 12-volt car cord that allows for charger operation from any 12-13.6v source, so you can even charge the batteries from your car lighter socket! You can also operate the radio while it is in the charger. LEDs on the charger indicate battery charge status.

This radio has 40 memories plus 2 call channels, simultaneous dual-band scan/receive, CTCSS, Digital Coded Squelch with paging and messaging, full crossband duplex, crossband repeat, 3 DTMF autodial memories, and a host of other features you would expect to find in a first-class radio. It even has a stereo earphone jack that allows for separating the audio from the two bands. It has a jack for direct connection to a car cord or other power supply for a full 5 watts output. Output from the standard batteries is 2.2 watts, but 12v batteries are also available, and work with the drop-in charger.

This is a terrific package for the new or experienced amateur. The accessories alone have a value of close to $200.

Total package price: $350.00.

>on the road again......

I guess you cross-post in order to "troll" for responses. So be it,
there are good people on 11 meters as well as amateur bands. There
are also idiots on both bands. What is your point, exactly?

I am not afraid of posting my real name OR callsign regardless of
which newsgroup it winds up on. It is YOUR cross-posting that brings
my response out of the amateur newsgroup.

If this is your main beef, you have a lot of growing up to do...
especially in the department of hiding your true name and identity.

From Websters: "invaluable - valuable beyond estimation : Priceless"
So Morse code is valuable beyond estimation? Morse code is priceless?
ROTFLMAO - Thanks, I needed that. For a second, I thought you were
serious.

KC sezz:

> This guy whines constantly about code.
> Do he even have a ticket? Does anyone know?

tsk.
I'm not a "guy", KC.
But yes, I am a ham. Since 1967. But I learned Morse code in 1964, just for fun. I have great passion for CW, and have personally taught code and theory to over 25 people (15 are still hams), including my 2 kids. Many of them are active on HF. How 'bout you KC?

Just because I don't like to see Ham Radio go down the drain, you think I'm a whiner? What do you stand up for that is meaningful KC?

Why not start a good thread on this newsgroup about something real, not just little jabs at others? If you can't cut that, try a little humor, cut-and-paste some new information, or a write a quick story about something interesting.

I used to think the same way until I read a book called "Made in America" by Bill Bryson. It turns out that the pronunciation, grammar and spelling used in N America is more like 16th-century English than current English is ! Between 1600 and 1900 the English language in England has been influenced and corrupted by the rest of Europe, whilst the English immigrants to America carried on using the "uncorrupted" English, often in small communities with little outside interaction.

So, sorry folks, our "American cousins" probably speak better English than we do ;-)

Nick.

Source record: 183979

>I am looking for the data sheet of a diode Motorola 5682 with >case 56 (do4) mounted in the linear amplifier Heatkit SB220.
>Any equivalent would be also good.

I'm looking in the parts list of my SB220 manual. They show four diodes used:

56-24 1N458 Silicon
56-26 1N191 Germanium
56-82 1N3996A Zener 5.1V
57-27 Silicon Diode - 1A 600PIV

Since your number isn't a 1N number perhaps you are asking about the 57-27 diode.

The 57-27 is used to rectify 120vdc (connected between filiment transformer and 20uF C4) and also (seven in series) to rectify the high voltage. 1N4005 (1A 600PIV - 8/$1 from All Electronics 800-826-5432) or 1N4007 (1A 1000PIV - 6/$1) are sutible replacements.

If this is not the diode in question, please e-mail me further details. I notice now that the number for All Electronice won't do you much good in Italy, but . . .

Regards,

Blake

:>With CW and HF Amateur activity dwindling, isn't it about time we stop
:>giving Special Rights to CW at the expense of voice modes?

With such a statement as that, you just told me you don't know what the heck your talking about Mr Powers.

It's a well know tactic though and even works on some airheads or people who will take unsupported statements at face value. Convince them that the Bull Dust and Horse Feathers you proliferate is true and it doesn't matter that true case is, huh?

Come back here and try to tell me that CW and HF are dwindling once we hit the sun spot peak. You and your pack of CB hopefuls will be in the same place your were at the last sun spot peak. Away from all the Hams because its too crowed. I know, I was there and it will be even more crowded this time around. But you don't have to believe me, time will be the test of it all Good Buddy.

Did you know there are still several countries where they shoot people for making illegal radio transmissions? Take your little old CB with you and head over there to Africa. Make a tour of the continent with it and see what happens when you try that "Freeband" crap. Then try and sell them the story you just tried to sell here. Know what they will say? Ten-4, you gone!

Or you can just stay over here where it is nice and safe and spew that unfounded Rhetoric. But I'm sorry to say my friend that you will still be one of those "Hopeful & Wishing" CBers even after this next cycle is headed south. But Ham Radio could use someone like you with your enthusiasm. Join the Group, make it better, work within the frame work set up to handle the problems. You will have accomplished something worthy of note then.

Rusty Nail

I would expect quite a few new outbanders on 10-meters, particularily the lower end of 28Mhz. Given the numbers of outbanders vs the much lower numbers of active 10-meter ham operators, especially in this part of the band, it may well be the hams who end up moving away because it has become too crowded.

-
Here is a summary of news items covered on edition #247 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 26-Dec:
-
1. Communications Assistance Provided Following Typhoon Paka
2. Hams Assist Rescue of Students from New Hampshire Mountain
3. MIREX Cancels Mir Crossband Experiment Due to Interference
4. NASA Delays January Shuttle/Mir Docking Flight by Five Days
5. Santa Visits Three Omaha Area Hospitals via ATV, Two Meters
6. Special Event Station Calendar
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast
9. New FCC 610 Forms Readily Available in Time for New Year
10. FCC Continues Processing Vanity Calls, Gate 4 On Schedule
11. QEX Goes Bimonthly with Fatter Issues, Cost Increase Looms
12. Dick Jansson, WD4FAB, Recovers from Surgery,
13. Harry Bradshaw, W4TPB, SK, Kentucky PIO
14. Dena Morgan, W5DRI, SK, Noted YL DXer and Contester
15. RAC Elects New Executive Board, VE7RD Re-elected President
16. British Hams to Get New "Sliver Band" at 136 kHz
17. ARRL International Humanitarian Award Deadline Approaches
18. Entry Deadline Nears for Annual ARNS Publication Contest
19. New Affiliated Club and Benefits Program Created by RAC
20. "The RAIN Dial-up" from Chicago
21. Seasons Greetings from "This Week in Amateur Radio"
-
Funding for the program's transmission and production expense was
provided this week by a grant from Gene Wicklund, W0ZOK, of
Horace, North Dakota, where "This Week in Amateur Radio" is heard
via satellite Saturdays at 8:00 PM along the Red River Valley on
the W0ZOK repeater on 443.75 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
```

degrees west longitude in equatorial geosynchronous orbit. The transponder center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz. Program audio is on the 6.2 MHz analog subcarrier. A fee has been paid to W0KIE for access to the satellite uplink.

-

On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

finaly i see some people can talked of the subject for this ng is for "amateur".
seeing everyone has their thinking caps on, here's another question.
you have an ant tuned to 147.000 mhz. is this same ant resonant at its 3rd multiple ie-441.000mhz. and which fraction of a wavelenth should it be (on 147.mhz) for it to work propely at 441.000mhz.

p.s. i dont know myself what the correct answer is, but ive heard many an argument brew over it at school.

Not true!! This is a resonant frequency for heating water. Nobody's sure why, but it causes the water content of food to heat much faster than other frequencies. That's why microwave ovens use it.

Using Japan logic, all of our existing "CB operators" are "ham operators".
Japan's "no-code" license is effectively a CB radio license -- limited
bands, limited power (5 or 10 watts, I believe), limited distance.

How exactly would the numbers stack up if we lumped our "CB radio"
operators into our "ham numbers", and compared them then?

Also, look at the date. The 70's was the beginning of mass commercialization
of radio gear. Given the Japanese propensity to have all the newest "bells
and whistles", it isn't surprising at all.

Your "something" is nothing at all.

> Hey Amor, have you ever tried to work 40 meters in the evening?
> Get real and get with the program for a change!

Some of the most fun CW DXing I've had is on the low end of 40m. But it's the International Broadcast stations in mid-band that create most of the havoc on 40.

The fact is that USA amateurs are restrained from free range within the bands by choke chains and fences. Maybe that's because many of them are like packs of big bulldogs. Also, it makes it easier to hear the phone DX when the bulldog pack is restrained on the other side of the frequency fences. Each layer of frequency mode fence has fewer bulldogs on it. The primary fence builder was The League. But even with an extra, I still have a fence which artificially separates me from the "outside world". 20m is a good example. One part of the band has an SSB sig every 1.8kHz. With some freqs being time/space division multiplexed by signal strength and propagation. But you go below the "fence" and it's like somebody pulled the plug. And there you find a VE6 chatting with a VU2 in the clear with +/-3kc of space around them.

You are conditioned to accept the fences. Many of today's present HF active hams have never known a fenceless band. But I started my ham life in an area of the world where there was no frequency fence. Try it sometime. The fresh air will do you some good.

> No code license allowed you to use 21 MHz and 28 MHz.
> All the other amateur bands required to have morse.

When I lived in Japan, in the 60's, there were many active hams on 21 and 28MHz CW, who were "no-code", low power licensees. One was a very dear friend who got DXCC on 15m that way with 20Watts and a vertical dipole on a bamboo pole.

So much for the CW-Church argument that CW will be swept into oblivion if no-coders are given access to HF.

As a relative newbie (with only 30 years ham experience) I've got to agree with you Cecil. CW is my favorite mode. But the code exam is killing the future of our service.
Ham Radio is suffering from a "Bad Rep'utation" amongst high tech experimenters and inventors.
I have so many friends and associates in Silicon Valley who would make great ham radio operators, but they are completely turned off by the code exam. Even when I tell them "There is a no-code license!", they ask me: "What's the catch?"
I have to tell them that HF access is denied for no-coders. They say, "Forget it!". We, the Amateur Radio Community, are the ones who are missing out on their talent.

Hello.

I purchases an Yaesu FT-8500 today with the ADMS-2D software and serial cable. Upon loading the software, I got a screen asking for my name, callsign and PASSWORD. I cannot find anything in the instructions about a password. Can someone please give me some info on what I should put in this field? I have tried making up some entries, but it looks like it is looking for something specific.

I sincerely appreciate any assistance. I would like to get this radio and software going!

SWR on 6M is around 1:1.5 to 1:2 depending on the freq.
Next question did I change or tune anything? NO.
I'm using an ICOM 706 Without a tuner.
Just go with it
I talked to a guy who could use it on 160M.
SWR on 160M is about a zillion to one for me.

Progress??? Iwill just only let you think about it. If this is so why
is the ARRL
asking for donations for avoiding loss of our spectrum allocations?
Seems we are divided fighting about the requirement of morse code.
Hey some
persons may argue that for the current times we should have the
requirements of
learning binary code. Wait we can progress a little more computer
code in C,
Pascal, Rexx , etc. Anyway some persons can argue that digital
communications
can be received when other forms of communications won't work. I
know a lot of
persons with marked abilities in this and other fields related to
communications that
avoid ham radio just because of the requirements. Need for
communications with
current No-Code licensing -they will argue that a cellular phone is
far chaper than any
HT, which regretfully is true. These are people that could help our

hobby to progress
even more than what we have now. I am starting to believe that it
is fear that if there
is no requirement people will not learn the morse code anymore and
the people that took the trouble to learn it will have trouble
finding use for it. Learning the Code is
good but should not be a requirement to communicate in HF. This is
similar to requiring
that you learn CPR before obtaining a marriage license and having kids
(by the way this
would be of more benefits) or some of the old auto enthusiasts asking
that you took
a required test in auto repair before obtaining a driver's license or
undertaking a trip
driving through rural areas. Hey not knowing any of the above two can
cause a lot
of grief perharps even loss of life but they are not required. There is
a difference in
things that you should learn because of tis benefit and things that
should be required.
I am proud of learning the Morse Code (and I have HF code privileges)as
well that I
see the benefits of it but that doesn't mean that I should block any
person that comes that would be an asset to our hobby with that
requirement.

But the FCC could choose to drop the requirement to one word per
minute any time they wanted to and still honor international law.

Since when do you need to know the code to get a ham license? I've got a no-code tech, which was real easy to pass (of course, I had a former FCC First Phone, but what the heck the tech class was really easy. It only took about 4 hours study time to pass the test.

Here is a perfect example of the dumbing down of ham radio. Before the testing was given over to the VE program, eveyone who passed the Novice test knew how to calculate the length of a dipole antenna, and here we have a holder of an advanced class that dosen't have a clue. Wonder why the amateur bands are sounding more and more like 11 meters?

Don't Know about you guy's!! don't know if your making fun of him are not sounds like you are to me.i'm not blind but have a very good friend that is,his name is Brian,he just past his 13wpm code 12/19/97 with a 104 key board on a computer,without any sound mech.to decipher it, he passed his 5 wpm test on a brile machine.if you think you could type on one ,i'll be there to lagh at you 3 or4 key strokes just to make (1) alhabet Ha! no markings on keys and does'nt even have but 8-9 keys on whole thing.
As a matter of fact he could probly out type most anybody on your 101 key board,with his
101 on his,
He has his own computer at home and is capable of reading messages with his sound card,also his key board is no more special than YOURS,it's the same.I'm proud that he took his 13 wpm instead of a wavier.also more talented ways you or i could never be does'nt even need a WHITE cane to get around.His eyes were removed when he was (one) year old.He is married to his wife also a (Ham) and she or their two childeren are not Blind,Is he Hadi-capped, Maybe?
Just because your amazied and are in disbelf that a blind person can type on computers,and the other which thinks a brail machine is hooked to a computer.Get Life.

Mike,

I've looked it up in the service manual for the TS-430s. I found
this:

Pilot lamp 14V, 80mA
Part number B30-0817-15

I think this is the right item; it is listed just above a listing for
"meter" on page 17 of the service manual, left column, 5th line from
the top.

Good luck.

Well, I held off once, but now I am going to say something.,.....
There are too many of the above lot who have a "net mentality" that are going to clean up the ham bands. Since when is your favorite guy have higher authority than the U. S Supreme Court? Your other friend might have run some people off the ham bands, but my opinion is that they did not have the money to fight and/or the backbone to do so. It may come as a surprise to you, but there is a lot of hams that are fed up with the ARRL and anything that they stand for. I think a lot of these "potty mouths" are rebelling against most everything the ARRL has pushed on the average ham.

Don't misconstrue my meaning. I, too, would like to see the ham bands cleared of all the so-called profanity, but..... in this day and age, I don't believe that is going to happen. What with the FCC and it's so-called budget cuts, where is the enforcement going to come from? From the ARRL? I think NOT. They are too selfserving to do much and most of the hams today are not going to be dictated to by some corporation.

Thanks.....Bob.....W5YHY

Glad to see you state this Scott.

I, for one, was known to frequently "TUNE UP" my KW amplifier
first on 28.020, then 28.025 then 28.030 as the bootleggers would move
around with their tell-tale 5 kHz steps!!!

Amazing how quickly they QSY when a REAL radio station tunes up on top
of them!

Thank you for pointing out this OBVIOUS step that more hams should be
taking even of they only run 100 watts on ten.

It's OUR BAND, and we AIN'T giving it up! (grin!)

We'll gladly share it with anyone.
That is, anyone who will take the simple step of passing the
test and getting an amateur radio license!

If using foul language on the ham bands is their
way of rebelling against ARRL, then they are no better
than pond scum. Frankly, when one allows themselves to
live in the gutter, then they lose all credibility except with those
that do live in the gutter. Sorry, but there's NEVER any
excuse for foul mouths on public airwaves.

>Don't misconstrue my meaning. I, too, would like to see the ham bands cleared
>of all the so-called profanity, but..... in this day and age, I don't
>believe that is going to happen.

Why can't it? If the PROPER process is followed, there
should be little reason to not have that happen. Maybe with
an attorney/ham at the lead, that process can be truly laid out
and followed so that the evidence against those foul
mouth louts will be sufficient to warrant an easy
follow-up by the FCC.

>What with the FCC and it's so-called budget
>cuts, where is the enforcement going to come from? From the ARRL? I think NOT.
>They are too selfserving to do much and most of the hams today are not going to
>be dictated to by some corporation.

There's no reason that proper evidence can't be obtained
and used against the potty mouths. It just takes the
proper lead. The ARRL doesn't have to be the enforcer, but
they can help with the evidence gathering to make the
FCC's job easier.

Know who invented cellular comms? HAMS! About the code: I practiced code until I heard dits and dahs in my sleep, but I stuck with it because it was a requirement to obtain a higher class of license, no whining or crying on my part, no questions asked; it was a requirement, period. Besides, I enjoy working CW. I'm not putting down those who do not like CW, that's their choice. As far as no-code licencees go, I say the more the merrier. After all, aren't the VHF and higher frequencies the ones coming under attack? A lot of the foul-mouthing going on on HF seems to be coming from the General through Extra portions of the phone bands. I can't recall hearing any proliferous foul language on the CW subbands. Since quite a few people wish to have CW eliminated as a requirement, let's have tests that include operating ethics and circuit diagrams to see just how much knowledge of radio people really have!

A transmatch is not a crutch if one is using a random wire antenna. The coil and caps in the transmatch plus the length of the wire when properly adjusted (let's all say it together, now) RESONATE the system. It might not be a very efficient system, but it is indeed resonant.

: hear with such a large antenna is unnecessary.

Yes, they often will not do anything about noise, unless forced to do so.

Try calling your state public utility commission - or whoever is in charge
of such things. I suspect that they can get action out of the utility.

: That is a common cry from people who are engaged in a practice that
: disadvantages others but not themselves. I don't know about you Chad, but

Regardless of how you feel about code, there is not a thing we can do about it right now. The matter is not going to be addressed on the international level for at least 4 years, and probably not until 8 years from now. If, and that is a big if, there is a change in the international accords, then it will be another 4-6 years (estimated by those familiar with how the US government works) for congress to change the laws and the FCC to implement the changes.

>And then I'll never drive a motorcycle for the rest of my life.

So, what? Your example is meaningless. It is equivalent to learning the
code and passing the code test, but never taking the written parts.

It would be valid if you were required to get a motorcycle endorsement,
at the same time you get your regular driver's license. Then, assuming
that you never expected to ride a motorcycle, the endorsement could be
considered worthless.

If you already have a driver's license, then the motorcycle endorsement
gives you an additional privilege. The same is true for the code exam.
You can get a Ham license, without the code. Pass the code test, and
you gain additional priviledges.

Note that I am not taking any stance on the desireability of the code
requirement.

Yep. Much of Amateur Radio has become a hobby consisting of a bunch of
operators of expensive appliances. The tests are a joke - they can be
passed by anyone who can memorize the answers. No knowledge of
electronics is necessary.

Hi.

I find out something interesting.

It is from Japan Amateur Radio League.

In April, 1961, Japan made a no-code license.
No code license allowed you to use 21 MHz and 28 MHz.
All the other amateur bands required to have morse.

The callsigns issued in Okinawa at that time used K prefix. In 1972,
the amateurs in Okinawa were assigned J prefix.

In 1975, the number of hams in Japan started to outweigh the number of
US hams.

1975: 3.9 MHz band opened.
1979: 10, 18 and 24 MHz bands opened to amateurs.
1982: first repeater installed in Japan.
1986: first 10m repeater
1989: 18 and 24 MHz bands opened to hams
1997 Guest Operator Permitted

Seems amateur radio activity in Japan is fairly new... well... I am
sure that's one of the reason why we don't have all the garbages
complaning about CW requirements.

Of course there is, Bill. The FCC could reduce the Morse code testing requirement for all classes of licenses to one word per minute right now and still be compliant with the treaty. It is a delaying action to say the treaty must be changed. What must be changed is the FCC. The primary problem is domestic, not international.

The Japs got it right in this instance. Screw the international regs; we'll have a codefree HF license if we want one! It's our nation, our radios, our rules.

Too bad the so-called "strongest nation in the world" can't do the same. Instead, we play footsie with organizations like the ITU, United Nations, etc.

You mean like the now defunct OO buffoons? All you ARRL people think about is control aka "net mentality". No where in any of my amateur examinations did it mention about one ham being above another. I will not tolerate another ham telling me what to do or say. If the FCC deems that I have committed an error, let them come to me. The ARRL can stuff it where the sun does not shine. I saw some of those OO letters and they were pathetic. It looked like a school boy trying to tattle on one of his classmates.

Amateur Radio may very well be sinking, and all you ARRL people can do is try to prop up the power pyramid and keep alive the "net mentality". Too bad. Really, you should go get an hones job.

You seem to have answered your own question. 441. is exactly three times 147., even in 'new math'. :-)

If the antenna is a full wavelength at 147. it will be 3 wavelengths at 441. and will exhibit gain.

If the antenna is 1/4 wavelength at 147., then it will be 3/4 wavelength at 441., it will definitely not have gain on 2m. but may have some small gain over a reference 1/2 wave on 441.

73, DavidC AA1FA

>Japan's "no-code" license is effectively a CB radio license -- limited
>bands, limited power (5 or 10 watts, I believe), limited distance.

Many people in Canada talk with no code hams on 14m. No coders can
use 10W there. Some even talked them on 80m.

no code license allows you use use all bands except 30m, 20m and 17m.

>How exactly would the numbers stack up if we lumped our "CB radio"
>operators into our "ham numbers", and compared them then?

What's the number of CBers in here are so important to no-code
licenses ??

Are you *sure* you read the whole of the book?
Much of it refered to the alteration of the 'early English' by
mispronouncing and immigration influence from the languages of Europe,
and also by native American and Latin American influences.

<< Ham Radio is suffering from a "Bad Rep'utation" amongst high tech
> experimenters and inventors>

What kind of "Bad Reputation"? That the hobby isn't receptive to hi-tech experimenters? One of the great myths of Amateur radio is that there's alot of Hi-Tech experimentation going on. Kinda like NASA's propaganda campaign that there is tremendous scientific spin-off value to their Shuttle program. (So much value that the President of the American Federation of Scientists has called for ending the Shuttle program) --- but I digress. I don't hear any clamor on the part of the scientific community to get on the HF bands.

<>

What is a "great" ham radio operator? Is it an interesting conversationalist who can liven up the one dimensional, bland and pedestrian conversations that are so pervasive on the bands? Is it a ham "altruist", a Mother Teresa of RF helping the technically disenfrahchised? The term "great" ham is really open to interpretation. Your observation is merely speculation. That these prospective "great hams" is illustrative of their metal. "Great"
persons lead the way.

From my point of view we are living in the "twilight" of amateur radio. Technological advance is outpacing the culture and amateur radio will "wither away" as we know it. The 19th century mode of communications that is an obstacle for so many will die in the 21st century. And with it will be the existing culture of Ham Radio.

Such is evolution. Bring it on!

Is there a theory test for the JA code-free HF license?
If the answer is yes, then there is NO analogy to the
US CB servcie as, US CB is a NO license service.
Additionally, US CB is a channelized service and
has NO home brew capability allowed.

>How exactly would the numbers stack up if we lumped our "CB radio"
>operators into our "ham numbers", and compared them then?

Why would we do that?

>Also, look at the date. The 70's was the beginning of mass commercialization

>Your "something" is nothing at all.

Actually, it is a very fair bit of information as it might be a good
indicator that more people would join the ranks of ham radio
if the code test was deleted. That's not something you (MD)
might want, but that could be the end result.

Am I missing something. I went to that homepage and saw that
in the description that the software only works in real time mode with
the full registered version.

What does real time mean. Does that mean that if I want to
try out the program on a live cw QSO that I will not be able to do so
and will have to record the qso and then decode the recording?

thanks.

DIVISIONAL NEWS

NEW MEMBER

A warm welcome is extended to the following new member approved on
19 December 1997. We hope you will have a long and happy association
with the Institute.

Associate Member

John Thomas CHRISTOPHER of Pendle Hill

Applications for membership approved since the end of January 1997
now stands at 130 - a 30% increase over 1996.

--Eric Fossey VK2EFY, Membership Secretary.

DIVISIONAL OFFICE CHRISTMAS BREAK

The VK2 Divisional Office will close for the holidays at 14.00 hours on
Monday 22nd December and will reopen at 11.00 hours on Monday 12th
January.

The VK2 Division Council wishes all our listeners a safe and happy
Christmas and a prosperous New Year - and remember - Don't drink and
drive - you might spill some on to your radio!

-- Eric Fossey VK2EFY - Division Secretary

HELP WANTED

We have had a request for a photocopy of an article which appeared in
the American or Canadian Amateur Radio Magazine of September 1989
on page 48. The article is called "Transmitter Power Output Increased to
100 Watts SSB" The modification is for an Uniden HR-2510; 10 metre all
mode transceiver.

We do not have a copy in our library. If anyone can help with a copy of the magazine, or of the article, we shall be very grateful. Thank you.

-- Aub Tpp VK2XAT - Divisional Librarian

'AX' FOR AUSTRALIA DAY

In celebration of Australia Day, all Australian amateurs can substitute the 'AX' prefix for VK during the 48 hours (local time in each State) of the
Australia Day weekend of 24-25 January 1998.

Use of the AX prefix is optional. The decision is up to each amateur. This concession for the use of the special event AX prefix was first granted in 1997, following a successful submission to the then regulators in late 1996, the Spectrum management Agency, now part of the Australian Communications Authority.

--Federal Media Liaison Officer Roger Harrison VK2ZRH

WICEN NEWS

As this is the last bulletin for the year, the Management Committee wishes all members a safe and happy holiday, but as usual, please be prepared for a sudden activation. We do not expect the Dural station to be disabled this time...

Of interest to mouse potatoes is that the Web page has been spruced up; there are many more photographs, and it's easier to find your way around. Thanks must go to the WICEN (NSW) Webmeister, Tony VK2TJF.

Members with access to packet radio will see a discussion on those T-connectors: how they came to be used in different ways, and why they should not be used at all (they are also used for 32v AC).

A reminder for events next year include the Bushwalkers Rogain, run by Alan VK2YYJ, on the weekend of 27-28th June at a location to be advised just two weeks previous, and the Hawkesbury Classic Paddle, on the weekend of 31st October and 1st November.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address

"majordomo@marconi.mpce.mq.edu.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

HAMS HELP IN WAKE OF GUAM TYPHOON

Ham radio is helping to keep open lines of communication between Guam and the Pacific islands of Saipan and Tinian in the Marianas in the wake of Typhoon Paka. The storm Tuesday caused heavy damage on Guam, but telephone service remains intact, according to Jim Kehler, KH2D, president of the Mariana Islands DX Association. Kehler says the islanders are taking the situation in stride for the most part. ''Typhoons in this part of the Pacific are something that everyone knows about and has a respect for, since we have all seen the results previously.''

While damage estimates are in the $200 million range, no one was killed or seriously injured when the storm passed over Guam, ''Everybody is just happy to be alive, and nobody is sitting on the curb crying cuz the house got flooded and the car got crushed,'' Kehler relates. ''That's Guam.'' Kehler says there's a great sense of community on the island, with everyone pitching in to help others get their lives and homes back together in the disaster's wake.

Kehler said 7.085 MHz is being used for inter-island communication, but HF conditions have not permitted reliable communication with the mainland. He said that during the storm's approach, hams on Guam also used 7.085 while tracking its path. During the storm, Kehler's and five other MIDXA stations were operational on 40 meters. The others included WH0AAV on Saipan, KH0CE, on Tinian, and N4UQM/KH2, KH2JU, and K9AW/KH2 on Guam. Kehler says he has not heard other club members on the air since the storm passed, but notes that power is down and several suffered equipment damage in the storm. The only VHF repeater on Guam survived the storm, but Kehler says it's not being used for emergency communication at this point.

Kehler said the MIDXA was formed in November after Typhoon Keith struck the Northern Marianas. ''One of the reasons was that Rota lost all commercial communications in that storm, and the ham community here was totally unprepared to help,'' he explained.

MIDXA members continue to monitor 7.085, ''at least those with a radio, antenna, and a house left,'' Kehler said. With commercial power and water out of commission, ''Guam is a mess,'' Kehler says, and some hams on Guam suffered ''lots of damage.'' Kehler says his station is OK, but considers his 100 W and a vertical too modest for regular communication with the mainland, so he's just been listening. He's been using a notebook computer powered from a generator to keep in touch.

In the storm's wake, Red Cross National Headquarters activated Virginia ARES to coordinate recovery information from ham radio sources, including Kehler, in the Pacific--primarily Hawaii and Guam. Virginia ARES says propagation from the [US] East Coast to the Marianas is ''too poor for direct monitoring,'' so it's relying primarily on Internet links.

Information summaries and updates are being posted on the Virginia ARES Web site, http://www.aresva.org.

The American Red Cross National Headquarters is requesting frequency searches and/or monitoring to identify any Amateur Radio stations that might be attempting contact from the affected area. The Red Cross is attempting to determine food and shelter conditions, power status and transportation status. No health-and-welfare traffic is being accepted at this point. Hams wishing to participate in the activation should e-mail name, call sign, e-mail address and home telephone to aresva@aresva.org. The ARRL has a memorandum of understanding with the Red Cross to provide disaster-relief assistance.

--ARRL Bulletin 76, dated 18th December, 1997

DX REPORT

AZERBAIJAN - Yannick, F6IHY, will be active as 4J0FR from December 23 to January 6.

MALDIVES - Yuu, JA3IG will be active as 8Q7IG using CW on the higher bands from December 19 to 25.

NEPAL - Joe, VK6BFI, and Neil, VK6NE, will be active using SSB from the QTH of Dick, 9N1ARB, until December 24. Their callsigns will be 9N1BFI and 9N1NE, respectively.

IRAN - EP8IC has been active on 20 meters around 0645z.

SOLOMON ISLANDS - Holger, DL7IO, has been active as H44IO on 40 and 30 meters, around 0700z and 1100z, respectively.

NORTHERN MARIANAS - A group of JA operators will be active from Saipan as KH0U and KH0S from December 19 to 22. Their planned activity will be using CW and SSB on 80 to 10 meters, including 30 meters.

SOUTH ORKNEY ISLANDS - LU1ZA has been active on 20 meters just before 0400z.

CENTRAL KIRIBATI - Norbert, DF6FK, will be active as T31BB from Canton Island, IOTA OC-043, from December 25 to January 10.

CHAD - John, TT8JFC, has been active using RTTY on 40 and 20 meters.

BELIZE - Joe, K8JP, should be active as V31JP from December 25 to January 12. Activity will be on 160 to 40 meters, using mostly CW. He will be participating in the Stew Perry Top Band Contest as well. Some 75 meter SSB in the DX window is expected.

CHRISTMAS ISLAND - Mirek, VK3DXI, will take a side trip to Christmas Island during the holidays. He will be active as VK9XU from December 21 to 26.

--ARRL DX Bulletin 53, dated 18th December, 1997

SPACE NEWS

SPUTNIK PS2 KEEPS GOING AND GOING

More than five weeks after its launch by hand from the Mir space station, the mini-Sputnik PS2 satellite beacon transmitter continues to beep away--the orbiting equivalent of the Energizer Bunny. Powered by just over three pounds of lithium batteries, the spacecraft's transmitter, on 145.82 MHz has been heard around the world and already has functioned longer than the original Sputnik 1 satellite did 40 years ago. The Sputnik 40 Years project that led to the construction and launch of the satellite has been funded by private donations, and the program's sponsors say they "still have some small debts to pay." The organizers are seeking six additional sponsors at $6000 each. The satellite itself was built by students in Russia, while another group of students on France's Reunion Island built the transmitter.

A film and a book are in preparation, and Sputnik 40 Years expects to make presentations about the project at many national and international meetings, including the annual dinner of Aero-Club de France. Guy Pignolet, secretary of the Aero-Club of France and an engineer with the French Space Agency said the project would very much like to have US companies or even individuals "share the adventure. " For more information, contact Pignolet at 2 place Maurice Quentin, 75039 Paris Cedex 01, France; e-mail pignolet@francenet.fr.

Reception reports go to The Radio Club of Jules Reydellet College FR5KJ, 103 Rue de la Republique, 97 489 Saint Denis Cedex, Reunion Island. Requests will be processed after the satellite has expired. For more information, see http://www.oceanes.fr/~fr5fc/spoutnik.html.

KC5VPF GETS EXTRA TIME ABOARD MIR

NASA has delayed next month's space shuttle flight to Mir, leaving American astronaut David Wolf, KC5VPF, aboard for at least another few days. The shuttle Endeavour was supposed to blast off January 15, but NASA announced Monday that the new launch date will be January 20.

Wolf, who's been on Mir since late September, learned of the delay last weekend. The delay will give the Russian crew time to do additional work on Mir, including three spacewalks and the arrival of another supply ship. NASA also wants to check out problems discovered on the shuttle Columbia which returned to Earth last week after a two-week mission. Also, one of Endeavour's cargo bay doors accidentally was dented last week. The Endeavour will pick up Wolf and drop off his replacement, Andy Thomas, KD5CHF. Thomas will be the last US astronaut to live aboard Mir.

AMSAT-NA SEEKS ADDITIONAL PHASE 3D DONATIONS

Conceding that it still needs another $270,000 to meet its share of the costs for the Phase 3D campaign, AMSAT-NA is once again soliciting donations to its Phase 3D Fund. A solicitation went out late last month over the signature of AMSAT-NA President Bill Tynan, W3XO. The letter expresses optimism that Phase 3D can be launched "before mid-1998, perhaps even within 6 months." AMSAT is asking its members to kick in another $100 each, if possible. "I think you will agree that this is a small
price to pay for the many hours of pleasure we will all receive when Phase 3D becomes operational," Tynan's appeal says.

Phase 3D was to have been launched this year, but the Amateur Radio package was bumped from the Ariane 502 flight after it could not complete necessary structural modifications in time to meet the launch schedule. The changes became necessary at the eleventh hour after the European Space Agency imposed more stringent vibration and stress standards on Ariane 5 payloads. AMSAT is hoping to hitch a ride aboard another Ariane 5 flight in 1998.

Tynan points out in his letter that the additional time has been put to good use. Phase 3D now will offer two S-band transmitters, each with a separate antenna. The integration team also is looking at ways to ensure maintenance of proper temperatures within the spacecraft.

AMSAT-NA's Keith Baker, KB1SF, said recently that he doesn't expect a new launch date will be set until European space authorities pin down the cause of the problems during the recent Ariane 502 flight--the flight that was to have carried Phase 3D aloft. An early shutdown in one stage put the payloads into lower-than-expected orbits.

Contributions in any amount are welcome to AMSAT-NA Phase 3D Fund, 850 Sligo Ave, Suite 600, Silver Spring, MD 20910-4703. Contributions are tax deductible.

CAROS PROPAGATION SERVICE TO DEBUT

Cary Oler at the University of Lethbridge in Canada relays word of a new radio propagation service known as CAROS, or the Coordinated Amateur Radio Observation System. Oler says CAROS is based on the principle of amateurs contributing radio propagation information for others to use.

"We have, for several years, been planning to implement such a service, primarily to test whether amateurs can supply sufficient information to make such a global service useful," he said in a recent e-mail posting. "Its success or failure will be directly dependent upon those who use it and find it useful."

Oler says the project is interested in reports detailing normal, below-normal and above normal propagation on paths with which you are most

familiar. Additionally, the project would like to hear about unusual propagation (non-great-circle, aurora-related, meteor-induced, etc) that you observe, as well as about rare contacts (both of which are routinely reported already via packet--Ed).

Oler says there are no limitations on reports. "We will accept reports from anyone, at any time, and on any frequency (from ELF to microwave and beyond). Moon-bounce communicators are welcome to join in the fun, as are satellite communicators and anyone else." He asks those submitting reports to be as specific as possible. Since there is a possibility that this service could generate data that might supplement types of future scientific research, we hope all submissions willbe detailed and complete." Reports will be archived.

Post CAROS propagation reports to http://solar.uleth.ca/solar/www/subcaros.html.

The main CAROS web page at http://solar.uleth.ca/solar/www/caros.html is updated every five minutes. Direct questions or comments to coler@solar.stanford.edu.-- thanks to Tom Frenaye, K1KI

CLUB NEWS

THE COFFS HARBOUR AND DISTRICT AMATEUR RADIO CLUB

...will hold its Annual Field Day at the club rooms , Hogbin Drive (Toormina end of the Link Road , next to the Thunderdome) Coffs Harbour , on Sunday 11th January . Bring and buy tables are available for your valuable second hand equipment , BBQ , cold drinks , tea and coffee making also available. Displays , demo`s and all sorts of goodies available to the amateur Radio enthusiast . Hope to see you there .

--Robert Hancock VK2MAN @ VK2PYU, Secretary C.H.A.D.A.R.C.

GLADESVILLE NEWS

The Gladesville Amateur Radio Club Incorporated would like to wish all listeners and viewers the Compliments of the Season and all the best for the coming year. We hope that you will have an enjoyable break over the holiday period.

It will however be business as usual with our television Test Transmissions from VK2RTV on Channel 35. The transmission on Wednesday - Christmas eve and New Year's eve commence at 7:30 pm and those on Friday and Sunday's at 7 pm. Over the holiday period is when many new viewers find the Test Transmission as people have the time to tune around or have a new VCR or TV to try out.

In 1998 we are hopeful of raising the antenna height of VK2RTV to extend the service area and to provide existing viewers with an improved signal level. More details about this in the new year.
In the Test Transmission this evening we will be replaying in full the

series about - Classic Engines of Yesteryear - a look at steam traction and stationary engines at various Museums and rally's. The material has been loaned to Television Gladesville by Rowling Stock Productions - a Sydney based group.

Need to get in touch with the Gladesville Amateur Radio Club then call the Club Telephone - 02 9427 0530 [repeat]
The crew at Television Gladesville would like to thank you for your support throughout 1997 and look forward to having you as viewers in 1998.

-- 73 Keith VK2ZZO - President and TV Co-ordinator

HORNSBY & DISTRICT ARC

Compliments for the festive season to all, from the Hornsby and District Amateur Radio Club Inc. [Please do the right thing, enjoy the festive season, but take care we want to see and hear you in 1998.]

Remember the first informal meeting for 1998 is 13th. January 1998, we would like to see all those taking an active part in the Open Night present.

The Open Night to be held on the 27th. January 1998 the fourth Tuesday of January 1998, this is a coming event not to be missed, so mark this date in your diary.

If you require more information on the Open Night ring John VK2WRT on 98022490 once more 9807 2490.

The Club Monday Night Net will carry on over the Christmas break, every Monday night, under the Club call sign VK2MA. Through the Club repeaters VK2RNS. And VK2RAT. The frequencies are, 147.250 with a positive offset and 439.975 with a negative offset. Listeners tune your receivers to 147.250, or 439.975. Your welcome to join the net, or come along to one of our meetings, in 1998 you will be made most welcome.
If you would like to know more about the Club, or its activites write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490. Once more 9807 2490.

Do not forget Tuesday the 27-1-1998 for the Hornsby and District Amateur Radio Club's Open Night.

-- John W. Turner VK2WRT Publicity Officer

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

The Association whishes all a Merry Christmas and a Happy New Year.
The Association would like to install an Internet Gateway. This would allow the NSW Rose network to hook up with the rest of Australia, and the world.

Since the loss, early last year of the gateway we were using, the Association is in search of an alternative solution for Rose users in

NSW. What we are looking for is to establish another gateway similar to that which we were using earlier this year. It would only have a single UHF link into the Rose Network - no VHF port, the Association will supply the software computr, radio, TNC, and network card. What is needed is the wire, that allows the NSW Rose ntwork to be linked to the rest of the world. Ideally the Association would like a public ISP (Internet
Service Provider), to assist us in our request.

"If you know of anyone who may be able to help the Association?"

Please get in touch with the Association by writing to:-
AAPRA, 59 Westbrook Avenue, Wahroonga, 2076.

Or by phone (02) 9489 4393.
Pcket Radio address, VKL2IN @ VK2WI
Internet address, aapra@research.canon.com.au
The Internet address is lower case characters

Dural Committee meeting.....8th

END OF THE BROADCAST

If you would like to submit a news item for inclusion in the VK2 Divisional broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity. Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

Go to an IRC channel and as each character comes in, sing
DAH-DI-DAH-DI-DAH-DAH-DI-DAH. Your transmitting key might be a
problem, but you could just use your keyboard to send - and . to the
other person in your qso!

>
>Is that similar to the Pro-64 (same model number) that lists for $299.99
>(always listed for that) and has been on sale for $199.99?

Nope. this one is much better. Not to be confused with the fact that they have the same model number, this one has 400 channels, and the Pro-64 only has 400 channels.

The Pro-64, very similar to the Pro-64, has a modification that allows you to adjust the volume with a potentiometer... where the Pro-64 only has a volume control.

5588. ANTENNA LENGTH

Hi.

I want to know how to calculate the antenna length (well... I don't know how to but I have the advanced license !! That's kind of what we are talking about for nocode-code argument... we need more practical exam ;-)).

Is it wavelength (MHz) = full wave ?
wavelength / 2 = half wave ?
wavelength / 4 = quarter wave ?

I think you had something else that you have to consider, but I can't remember it...

Thanks.

Please e-mail me at slime@radiotelephone.net.

have you ever thought of the ham radio in the future ?? how old
are you and who do you talk with ?? I hope you say something like
20s and 30s. NOT 50s or 60s or even 90s.

>I've said it once and I'll say it again....if someone does not want
>code...Needlepoint and
>sewing don't require it...they should be happy there.

yeah, but why they can't use voice HF by not knowing the code ??

Some countries allow you to use it because of such no-make-sense
argument.

Actually the GSM PCS 1900 phones are lower than that, .25 watts, and
have a duty cycle of only 12.5%. Not much RMS power.

Whilst I am sure this may well be true of large cities, many
early British immigrants to America ended up in small towns with
few outside influences.

Sure, many immigrants to America came from other countries.
However, immigrants (particularly 1st & 2nd generation) tend to
stay together in small communes. The same sort of thing
happened with Dutch & German immigrants.

Hi,
here is a Web Page that may be of some help .
http://pw2.netcom.com/~ac6v/pageant.html

The formula for a dipole antenna-- you did not say what antenna you were
interested in -- is LENGTH IN FEET= 486/FREQ IN MHZ
thus to figure a 40 meter dipole
it would be
468/7.1 =65.9 feet
to get each side measurement now divided by 2
65.9/2= 32.45

For practical puposes, the overall length of a half-wave dipole is given by
150/F metres, where F is the frequency in megahertz.

And 1 metre equals 39.37 inches.

Code: No

Future for Amateur Radio: Yes

Comment: Code is fun and is sometimes the only mode that one can use to effectively communicate. However, it should be treated as if it were patckett, not maintained as a licensing requirement. It should be addressed in the examination questions without a sending or receiving requirement.

Lawrence Roll ... K3LT ... check your "sent file" or DejaNews for the quote.
You have REPEATEDLY stated that code testing is "necessary" because, given
the choice, people will not learn Morse and Morse will die out.

(I assume that you count yourself as a "whole person" ... though in case
you only rate 1/2, Dick Carroll has also made similar statements.)

Gee, for someone who professes to know all, you really are quite thick.
I suppose you don't know how to look things up in books?? You know
books, pages made of paper, have letters printed on them...

you've made some really stupid posts before, until now, the one about
wanting to modify your radio to say hello to your police friends, but
this is now a new high in M@S@ stupidity

Since you didn't specify what type of antenna, one can only assume your
are looking for a dipole SO...

to determine the length (in feet) of a 1/2 wave dipole

divide 468/freq in MHz IE: 468/28.410 = 16'5" approx.
a 1/4 wave of that would be approx. 8' 3"

Remember slimeboy or slimeball or whatever, that this represents the
entire length of the dipole, not each leg.

outhouse??? maybe he could start with certain potty mouthed nocode tester
types, particularly those living in eastern PA. Seems the comments typed
here but those parties rival the so called 75/80 meter potty mouths.
Just goes to show that you really don't need an upgraded license to be
obnoxious and vile, just a keyboard, an ISP and a narrow one track mind
(and not even an anderson type fossilized geezeroid type mind at that)

No offense, but ... So you're a passive person with little tendency to
ignore the herd instinct. So what? That doesn't make you a "good" person
... if anything it might call into question your ability to make choices
for yourself, rather than simply "following along."

> Besides, I enjoy working CW.

Great, fine, beep your brains out ...

> I'm not putting down those who do not like CW, that's their choice.

Good ... (gee, that's awfully "big" of you)

> As far as no-code licencees go, I say the more
> the merrier. After all, aren't the VHF and higher frequencies the ones
> coming under attack?

So, non-beeping hams are OK, as long as they don't let them into "your"
HF bands??? Is that what your are saying, or am I reading too much into
your comments? (they could have been more specific in this area)

> A lot of the foul-mouthing going on on HF seems to
> be coming from the General through Extra portions of the phone bands. I
> can't recall hearing any proliferous foul language on the CW subbands.

Of course not, it takes too damned long to say much of anything in Morse
code ... but you do hear lots of swooshing carriers, strings of dits, and
the occasional "fu fu fu" in the CW bands, as well as many deliberate
(and usually futile) attempts to jam the other digital modes which share
the "non-SSB" parts of the HF bands ... this idea that Morse fanatics
constantly try to promote that "their CW bands" (which don't exist, after
all) are squeaky clean and lid-free is absurd on its face.

> Since quite a few people wish to have CW eliminated as a requirement,
> let's have tests that include operating ethics and circuit diagrams to
> see just how much knowledge of radio people really have!

I don't believe that tests can reliably filter out social miscreants and psychopaths, but I'm all for improving the written tests and the licensing structure to ensure technical competence, eliminate the Morse-based caste system, and inject a note of sanity and equity into our licensing system.

Interesting observation! Maybe we should change the majority of the
message traffic here from CW is killing ham radio to VE testing is killing
ham radio. The more I think about it, I'd concur with eliminating the CW
requirement if the question pools were not published and testing was
returned to the Federal Government....

Amor powers, posting from a phoney address, wrote:
"Should CW be outlawed? Spark is not used anymore. Do we miss it?"

Amor is becoming like Burp - he also recycles his old posts, but at least he allows a few weeks to go by before doing so.

But then Bill P. responded:
"Knowing hams, if there was a way to legally go back to <spark> and use it again, many would."

Well Bill (and Amor), according to the history books, when hams were banished to wavelengths below 200M (in 1912), they had to give up spark (class B emissions) and turn to the new vacuum tube technology, for no spark rig would work at those shorter wavelengths. I challenge you or any other ham to build a spark rig that would work on 160m (MF), let alone HF. From what I've read, hams were very happy to leave spark behind in order to explore the new HF spectrum they were given.
(So Bill, I would say, in reference to your "knowing hams" statement, you really don't know hams too well. But such disparaging remarks against hams places you in the same catagory as Burp, Spew, Karl, CB-Bimbo, et al.)

Finally, Bill Nelson remarked: "Yes. Loved that DC to daylight band-width."

Bill, from what I've read, spark used about 50 kc of bandwidth. My references are back in Hawaii, and upon my return I'll provide the title and author for you. The ships, shore stations, and hams of the day were able to vary their operating wavelengths - their signals did not blanket the entire spectrum.

73 from snowy Nevada,
Jeff KH2PZ / 7

You're actually referring to CBers who happen to have gotten a ham license (pretty easy to get nowadays). In 22 years of being a ham, I've *never* known someone who was first an HF-licensed ham, proceed to then play on 11m. With 160 ,80, 40, 30, 20, 17, 15, 12, and 10m privileges, with all their propagation variations, what ham would choose to mess around on 11m?

Again, CBers who become hams is a different catagory than hams who might turn to CB; the latter class is certainly a very small minority.

Understood. I personally hold Advanced license and I hate to see if
my proposal goes through ;-)

We must somehow make no-code HF access in near future.

The current code holders must have the advantage to avoid unnecessary
complaints and confusions.

I am against code, but I respect for those who complete the code
requirements.

We want to take the voice of pro-coders and no-coders. I made a
"suggestion" that likely took the both sides equally well.

5619. Divide and Conquer: The League & Amateur Radio in USA

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-21 00:00:00 UTC
From: "Amor Powers, Radio" <power@radio.net>
Message-ID: <349DA2A5.45FD@radio.net>
Source record: 183884
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

For over 30 years, The League has sponsored many projects to divide and conquer Amateur Radio. Promotion of Incentive Licensing and other Fracturing Policies have led to splintering and widespread inability for hams to communicate with each other on the air.

By dividing up the bands, modes, and licensee priveledges, fences have been erected between amateurs on the air. It has bred a "Top-Down" structure of Extras in the top position, able to communicate with all amateurs; in the "lower levels" we have the vast majority "the masses" unable to communicate with everyone, and amateurs around the world.

Thus, the masses are "kept in line". The present structure of amateur radio is more similar to a corporation than a democracy. It mimics The League itself. In a way, Freedom of Speech has been lost by chipping away splinter by splinter. Sometimes we don't appreciate things until they are gone.

Through self-motivation or self-satisfaction, whatever you want to call it, many of us have played this game, because it is "the only game in town". As an Extra I must confess that I too have played it, because I could "win". Some other hams are not so fortunate, and they "lose". But as the years go on I now realize that the policies of divide and conquer have worked all too well, and they hurt us all. The recent ones are now backfiring, as the straw breaks the camel's back.

So, now when The League asks us for more money to purvey their policies... A question we should ask is:
Will they continue to use it against us again?

However, CB has its uses - getting instant traffic reports, etc., that
don't exist on the amateur HF bands because of the local and widespread
nature of the operators.

And it can be truly, truly amusing to listen to, too!

HMMM, maybe not...

"Worked All Rhode Island" (WRI) Award

Sponsored By:
The Associated Radio Amateurs of Southern New England (W1AQ)

The Worked All Rhode Island (WRI) Award is awarded to those amateurs who have confirmed contacts with stations located in the State of Rhode Island and Providence Plantations. The categories and requirements are listed below. This 8x11 cardboard-stock award certificate is suitable for framing in any ham shack.

To obtain your certificate, please mail documentation confirming required contacts, the certificate category you are requesting, and a large SASE with sufficient postage for the certificate and return of your documentation, to:

ARASNE (W1AQ)
43 Kelley Street
East Providence, RI 02916

--

WRI Counties

The WRI Counties award is awarded to those amateurs who have one confirmed contact in each of Rhode Island's five counties [which are as follows: Providence, Washington, Kent, Bristol, and Newport]. Amateurs may make contacts on any bands (HF or VHF) using any modes (FM, CW, etc.) they desire.

To those amateurs seeking a challenge, there are also several "sub-classifications" of the WRI Counties award. These sub-classifications and their requirements include:

VHF mixed-mode, mixed-band
Contacts made on any amateur band above 30 MHZ, using any mode, in any combination thereof.)

VHF mixed-mode, single-band
Contacts mode on a single VHF amateur band above 30MHZ, using any modes.)

VHF single-mode, mixed-band
Contacts mode on any amateur band above 30 MHZ, using a single mode of communication (FM, CW, etc.)

VHF single-mode, single-band
Contacts mode on a single VHF amateur band above 30 MHZ, using a single mode of communication (FM, CW, etc.)

VHF mixed-mode, 5-band
1 full set of 5-county contacts from each band (50MHZ, 144MHZ, 220MHZ, 440MHZ, 1.2GHZ), using any modes.)

VHF single-mode, 5-band
1 full set of 5-county contacts from each band (50MHZ, 144MHZ, 220MHZ, 440MHZ, 1.2GHZ), using a single mode of contact (FM, CW, etc.)

HF mixed-mode, mixed-band
Contacts made on any amateur band below 50 MHZ, using any mode, in any combination thereof.)

HF mixed-mode, single-band
Contacts made on a single HF amateur band below 50 MHZ, using any modes.)

HF single-mode, mixed-band
Contacts made on any amateur band below 50 MHZ, using a single mode of communication (SSB, CW, etc.)

HF single-mode, single-band
Contacts made on a single HF amateur band below MHZ, using a single mode of communication (SSB, CW, etc.)

HF mixed-mode, 5-band
1 full set of 5-county contacts from each band (80/40/20/15/10) using any modes.

HF single-mode, 5-band
1 full set of 5-county contacts from each band (80/40/20/15/10) using a single mode of contact (SSB, CW, etc.)

WRI Cities/Towns:

For the amateur operator who seeks even greater challenge than WRI Counties, the WRI Cities/Towns Award is awarded to those amateurs who have one confirmed contact in each of Rhode Island's thirty-nine (39) cities and towns. Amateurs may make contacts on any bands (HF or VHF) using any modes (FM, CW, etc.) they desire.

Sub-classifications available: same as those with WRI Counties award

---

WRI Zip Codes:

For the ultimate in challenges to the amateur community, there is the WRI Zip Codes Award. This award is given to those amateurs who have one confirmed contact in each of Rhode Island's eighty-seven (87) zip-code districts. Amateurs may make contacts on any bands (HF or VHF) using any modes (FM, CW, etc.) they desire.

Sub-classifications available: same as those with WRI Counties award

> LICENSE OR BEEN IN THE HOBBY FOR 30 YEARS !!!
> If after reading all the crazy #@%&$ that this woman has written,
> you believe she has a license ...I have some prime real estate
> for sale you might like....a bridge too....

Actually the city of New York, in conjunction with its Adopt-A-Highway program is raffling off the Brooklyn Bridge. In return for a minimum bid of $25,000 (the cost normally spent by the city to remove graffiti and empty the trash), the lucky winner will get a very nice plaque attached to the bridge for a period of one year as well as the bragging rights to same. The money bid will go to keep the bridge neat and clean

BTW, Jerry's call is public record, KK5YY. He "bite the bullet" and upgraded so that he might utilize the HF bands to his advantage, unlike some, who'd rather piss and moan for year after year in so called protest. But then again, that's only my observation and opinion, something that I've been told I am entitled to, despite the best efforts of those same pissers and moaners to censor them.

Yep. Our radio club is embarking on a one-tube transmitter construction
project (somewhat difficult today due to a lack of available parts and lack
of disposable time). One of the larger growth-groups in ham radio is
interest in AM or "boatanchors". Old equipment requires simple maintenance
and rebuilding/restoring.

5631. A lot of "BOLD" talk !

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-21 00:00:00 UTC
From: kk5dr@iox.com
Message-ID: <67jb4i$2m6$1@nntp-3.io.com>
Source record: 183896

I notice alot of really BOLD talk, from people posting on the net. These same people are very meek in voicing thier opinions
in public(ie, at hamfests, club meetings, on the air).
If your so finatical about your opinions, why the timid approch in public ? Why save all your "Venom" for the net ?
If you really want to turn people towards your "cause", talk to them in person, on the air, at hamfests, with the same
"religous", finatical, fervor that you use here on the net.
Personaly, I don't believe much of what I see on the net, and even less of what I "hear" about.

Don't take yourselves so seriously on the group, you'll give yourself a stroke, or heartattack !

I have had responses from my earlier posts on the net, that were downright, "VILE", foul, and rude, from people whom I
have met in person later, and they tried to say they were "just kidding". Yeah, right, kidding ! Are death threats, "just kidding"
?
Lighten the hell up !!!
Amateur radio is not worth killing over ! It's not worth lowering yourself into the "gutter", over!

Compromise, co-exsist. There is a place for everything, new & old in amatuer radio. It's not nessary to kill off any part of it.

Co-exist, or all of it will die.

Hi Amor P.
In you mesage, below, you indicate that you have been licence since the mid 60's. You also indicate that you have taught cw. On both counts I salute you.
My question, though, why are you so set againts cw and why are you sending out messages that seem to derate you?
I have been an amateur since the mid 60's. I learned cw in scouts. Actually I initially learned it because I had 2 choices, learn cw or semiphore. I had polio at 5 and my physically disability made cw much easier to learn.
I enjoyed using cw until I got involved in vhf fm then packet and now the internet.
I am not on the radio, now, because of the mess that is presently on 2 meters,etc.
I have not been on cw since the mid 70's but I still see the value of learning it. Sort of like it is good to know the ohms law even if you never plan to use it. There may come a day when knowing it will be a major benefit. Who knows.
Larry

Where is this 14 meter band?
Our nocode operators are using from 30 mhz and up, prodominately 144 /
450 mhz..

"Amor" ... the *real* problem is that the vast majority of coded, HF-licensed, ARRL-supporting hams are appliance operating contesters and dxers who are simply too technically ignorant to be capable of realizing just how much these people could contribute and how much the loss of that talent has cost ham radio as a whole.

Some of them, perhaps many, actually fear the possibility of progress that they are incapable of understanding.

You have spoken in other posts about "the lost generation" ... I agree that there *IS* a "lost generation of HF operators" but I think they're different than your description. To me, the "lost generation" are the majority of currently HF-licensed, appliance-operating hams who know virtually nothing of how their radios work, don't care, just want to yack and collect wallpaper, and insist on precluding change or progress at every turn.

THEY are the "lost" ones ... they've lost the entire spirit of ham radio, the entire concept of what it's *really* supposed to be about, and they've lost the opportunity to learn all of the marvelous things that have happened in the past couple of decades to advance the technology far beyond the level of the antiquated techniques that they (minimally) comprehend.

THEY are the "lost ones ...

During Desert Storm the military had considerable problems with communications as a result of the sandstorms in the desert regions. They found that the synthesized front ends of the high tech, new equipment were subject to electical interference caused by these storms. Collins to the rescue!...Collins KWM-2 s and other surplus military gear were hauled out and put on line once again. Yes...tubes, the old technology could handle the job. And when conditions become so deteriorated that even voice communication is no longer possible, you can also count on the oldest form of digital communication to pull you through...CW. For ham radio...CW is part of our heritage, our beginnings.

Happy Holidays to all.

This is kind of true, but need not be ... let's hope it's just "an
eclipse" and the light will return soon.

> Technological advance is outpacing the culture and amateur radio will
> "wither away" as we know it.

Technology HAS outpaced "ham culture" ... decades ago ... at least the
"culture" of the majority of appliance operating, ARRL-supporting hams
... the ARRL's "Incentive (to pass faster and faster Morse tests) Licensing"
abomination saw to that by placing the dominant emphasis in ham radio on
Morse decoding "skill" (I use "skill" in quotes because I hesitate to assign
the full value of the term skill to a Pavlovian conditioning of one's nervous
system that requires no innate intelligence.)

> The 19th century mode of communications that
> is an obstacle for so many will die in the 21st century. And with it will
> be the existing culture of Ham Radio.

Much of today's ham "culture" SHOULD die IMHO ... the "pileup-busting", "stomp
'em into the dust with your legal-limit (+?) signal", prostate/aches&pains
on-the-air bitching roundtables, and many other facets of ham "radio" that have
NOTHING to do with an interest in radio at all ... I would not mind to see all
of those go away, they are indicative of the perversion of the spirit of ham
radio that a the ARRL represents and advances.

> Such is evolution. Bring it on!

We could STAND some Darwinian selection ... big-time! For once I find myself
agreeing to some degree with Mr. Whatley ...

I knew a Japanese student who got his Extra in the US. Japan allows reciprocal privileges regardless of nationality, and with a US Extra class operator's license you can get a 1st Class Japanese license. Apparently everything is the same as with the domestic license except your prefix is 7J and not JA. My friend didn't care. A 1st class license is, I suppose, more difficult to get despite the lower 12 wpm European character code test. (He did mention a Japanese test, but I don't see one; maybe it was deleted. It would sure be a good reason to prefer operating reciprocally.) The point? He operated only CW. There may be other reasons besides code tests some Japanese do not upgrade.

BTW, any Technician who would like a 4th Class license (10W max on 160, 40, 15, and 10m, 20W VHF) need only travel to Japan and apply for the reciprocal license; fee is ¥7,000 for the first year, according to the link in <http://www.vtt.fi/ket/staff/komppa/license.htm>. (That's for a station license; apparently your operator's license issued in the US, Canada, and a number of other countries is operating authority automatically, without application or fee.) Oh, and sorry: 4th class operators aren't allowed to use CW. (Lends a new meaning to "no-code license", doesn't it?)

What's even more scary is that the vast majority of hams are in that state
now ... they *think* they know something, but they are in fact ignorant of
modern technology (primarily because of the practices and policies of the ARRL,
and their effect on FCC rules and licensing/testing).

At least you have learned enough since then to realize how little you
really knew then ... that is more progress than most hams make in a lifetime.

The maritime services have been the last holdouts. Most countries no longer require a Morse-trained "sparks" on board most vessels. In 1999, by intl. agreement, ALL use of Morse in the maritime services for safety-of-life traffic will be abandoned and GMDSS will be THE system.

> Today we can do it with DSP !

Hi Amor, I've had exactly the same experience in Silicon Vally and
in Chandler, AZ. I know no-code techs who are PhD's in EE who refuse
to help me out on my HF projects because they are banned from HF.
The most knowledgeable RF engineers I know are not hams because of
the Morse code exam. After I hired three hams in a row, my boss told
me, "No more hams!" :-) We need to upgrade the entire ARS.

Hi Steve,

Just curious, do you have anything to contribute other than gratuitous insults directed at Carl and Len? I can't disagree that Carl is a bit mouthy at times but I am at a loss to understand your problem with Len. His arguments are for the most part lucid and on subject, not

insulting.

Is the problem that you lack the mental faculties to debate him or is it simply disrespect for your elders? Don't let your Mom see your postings she will surely be embarassed she didn't raise you better.

Have a nice holliday and try to be a bit nicer next year.

FALSE ... we can get US rules changed to 5 wpm or less for ALL HF access.
We could persuade Congress/FCC/State to take an exception and ignore the
ITU treaty WRT Morse testing as other countries have done ... clearly there
would be NO international repercussions ... nobody (but hams) really give a
shit.

> The matter is not going to be addressed on the international

This is akin to Hans' recent "let's get on with more important things" comments
.. IOW, an attempt to divert/diffuse the debate in hopes that it will fade and
go away before the no-code-test faction succeeds in achieving their goals.

NO WAY JOSE!!!

Okay Cecil, I'll bite.

Your statement implies that prior to incentive licensing that the
amateur radio service had plenty of innovation. Thus, what exactly
changed in the incentive licensing structure to cause "innovation"
is cease?

Naturally, I expect you to regress out other social and technical
factors, such as the increasing complexity of engineering designs
(you yourself once said there were projects you would be incapable
of doing without your employer's resources).

5652. DX is starting to roll in...lots of fine-sounding outbanders on 28.0-28.1Mhz

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-21 00:00:00 UTC
From: cbrambo@aol.com
Message-ID: <19971221175701.MAA01312@ladder02.news.aol.com>
Source record: 183941

The band is just starting to open up on this fine Sunday morning and what do I hear? Outbanders on 28Mhz. More outbanders than hams, in fact.

You lose again, HAMBOS! Free radio operators will gradually take control of the lower portion of your 10-meter band. Nothing you can do about it. There's strength in numbers. Ours, not yours.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

If you really have an advanced licence (?) then this question should have been on one of the exams you passed. Good Luck, Mr Slime!

>wavelength / 2 = half wave ?
>wavelength / 4 = quarter wave ?
>

299.8 meters / Frequency in MHz will yield the length of a full wave antenna that is infinitely thin. This is in meters. To convert multiply the result by 100 and divide by 2.54 and that wil give you the deminsions in inches. Divide that by 12 and you have feet. Now to have a good start at getting a good SWR, take that length and multiply it by .95. Younow ahve a full wave antenna.

full wave divided by 2 is a half wave
full wave divided by 4 is a quarter wave.
and so forth and so forth.

Subject: Re: Diode data sheet x SB220 RF amplif.

>I am looking for the data sheet of a diode Motorola 5682 with >case 56 (do4) mounted in the linear amplifier Heatkit SB220.
>Any equivalent would be also good.

I'm looking in the parts list of my SB220 manual. They show four diodes used:

56-24 1N458 Silicon
56-26 1N191 Germanium

56-82 1N3996A Zener 5.1V
57-27 Silicon Diode - 1A 600PIV

Since your number isn't a 1N number perhaps you are asking about the 57-27 diode.

The 57-27 is used to rectify 120vdc (connected between filiment transformer and 20uF C4) and also (seven in series) to rectify the high voltage. 1N4005 (1A 600PIV - 8/$1 from All Electronics 800-826-5432) or 1N4007 (1A 1000PIV - 6/$1) are sutible replacements.

If this is not the diode in question, please e-mail me further details. I notice now that the number for All Electronice won't do you much good in Italy, but . . .

Regards,

Blake

Message-ID: <Pine.SUN.3.95.971221110153.14512C-100000@diamond.sierra.net>
Source record: 183956

Gang,
Please pity those of use who not only have to spend several weeks in snow up to our "okole" (oh, do I miss Hawaii!!), but also are relegated to reading this newsgroup via an email digest. The digest arrives daily with all the day's articles appended - one HUGE email message. To read the articles, one has to page down through the one email message. This means having to page through lots of garbage (such as lafferty@bluemoon.net posting a .gif-encoded advertisement for something he's selling, and lots of unedited text in which you might be doing a follow-up). Please please please use your editor to cut out the unnecessary stuff, okay? (It will make your comments more appealing to read, too, and folks might take your opinions a bit more serious.)

Merry Christmas to Constintine, too.

73 from a Hawaii-boy freezing in Nevada,
Jeff KH2PZ / 7

>If the antenna is a full wavelength at 147. it will be 3 wavelengths >at 441. and will exhibit gain.
>If the antenna is 1/4 wavelength at 147., then it will be 3/4 >wavelength at 441., it will definitely not have gain on 2m. but may >have some small gain over a reference 1/2 wave on 441.

The answer to the first question, whether an antenna will be resonant at 3x the frequency for which it is designed, depends on the type of antenna system. If we are talking about a simple 1/2 wave dipole or 1/4 wave vertical, the answer is yes.

There is clearly no current flowing at the end of the antenna, therefore this is a high impedance point. Any multiple of 1/4 wave away from the end will be a low impedance point. The impedance seen at these points will be only radiation resistance.

Gain is a different issue entirely, and requires that we ask "Gain in what direction"? Generally, longer antennas (3/4 or 5/4 wave vs 1/4 wave) will have more lobes and more nulls in their radiation pattern. The longer the antenna, the more lobes there are, and of course the narrower each lobe becomes.There aren't many applications where you would actually desire multiple main lobes in your antenna pattern, but, if it gives you access to a band you wouldn't be on otherwise, why not?

If you have a non-resonant antenna with some kind of loading or impedance matching (like a 5/8 wave), the issue is too dependent on specifics to answer in a general way. Except to say that it will not likely be resonant on the third harmonic. At some other frequencies, very likely.

>Current holder of Basic: Basic
>Current holder of Advanced: Intermediate
>Current holder of 5WPM: Advanced
>Current holder of 12WPM: Advanced

This doesn't make sense to me.

Right now, in Canada you can have either Basic or Advanced qualification, which is determined by which written tests you passed. Someone with Advanced can use more power, operate a repeater, and build their own radio equipment. This makes sense, because they have to be more technically knowledgeable to do these things.

At the same time, completely independent of that, you can have no code, 5 WPM code, or 12 WPM code. The code qualifications give access to some or all HF bands, but do *not* have any effect on technical issues like power output or building your own radio.

So you can have one ham with Advanced but no code. They can build transmitters, use maximum legal power, and operate repeaters - but only above 30 MHz. Another ham can have Basic plus 12WPM, which allows access to all HF bands but at reduced power, and they are limited to using commercial equipment - no homebrew.

Your proposal would make the "Advanced" amateur no more knowledgeable than the "Intermediate", which is silly terminology at least. It would entirely eliminate the class of hams who have only Basic theory but have passed the code test and have HF access - you'd need the Intermediate theory for any HF access. And you would allow a ham to use more power if they passed a code test, which is nonsense - what does knowing Morse code have to do with being able to safely use more power?

On top of that, the suggestion for upgrading current licence holder is even sillier. You'd give a current holder of 5 WPM code plus Basic an Advanced licence? Even though the Basic test covers almost nothing about transmitter design, you'd give these current hams the ability to build and operate 1500 W transmitter - because they once passed a 5 WPM code test?

Good grief! Are you trying to make the Canadian licence system like the USA, where code speed is a more important qualification than radio theory? What a backwards step!

What problem are you trying to solve anyway? If you just want the code requirements reduced from 12 WPM to 5 WPM, why not keep the present licence structure but allow full HF access for 5 WPM code?

Dave

>>sewing don't require it...they should be happy there.

Needlepoint and sewing do not require the use of publicly-owned radio frequencies or a license from the government. Ham radio does. Therefore, the requirements for usage must be relavant. Morse code no longer is. This is why required knowledge of Morse will eventually be eliminated from amateur radio...either due to pressure from within the organization or perhaps the issue will be settled in court. Or, perhaps amateur radio will continue it's self-destructive path towards an eventual death of the hobby and it will become a moot point. Your choice.

>Is it wavelength (MHz) = full wave ?
>wavelength / 2 = half wave ?
>wavelength / 4 = quarter wave ?

Yeah, wavelength in meters is 300/F where F is in MHz. So if you
wanted to know the length of a full wave at 7 MHz it would be 300/7
or 42.86 meters. A halfwave would be half of that or 21.43 meters,
and a quarter wave would be one quarter of a full wave or 10.715
meters. (1 meter is 39.37 inches)

>I think you had something else that you have to consider, but I can't
>remember it...

Now a real antenna will be shorter than that because of something
called "end effect". This is a capacitive loading of the ends of the
antenna, and typically can cause the calculated length to be from
2% to 5% too long for resonance. So expect to have to prune the
antenna a bit to get it to be resonant on the design frequency.

Only the selected and pure can know the true joy of operating with a CW signal. Once you have experienced the true calling of CW, the exquisite purity of the medium, and have proposed to your Lady Love by means of tapping out your request with your knuckles on her forehead, you will never return to those disgusting signals which carry voice, video, or packets.

First of all, CW operators are better than everybody else. Because we can send something out in a primitive code which was invented before voice modulation, it clearly shows that we understand all of the technical nuances of ham radio. Them damned tests mean nothing.

It is CW which is the measure of ultimate knowledge, not any test the FCC may administer about foolishness like transistors or modulation theory. It is obvious to CW people that, to be meaningful, ham radio must stay back in the stone ages during which CW was invented (there weren't nothing else then, Brother, so they had to beat on them rocks).

And take a look at the rest of you: SSB operators sound like they've just inhaled from a balloon filled with helium; FM operators are frustrated CW operators, always silently sending fragments of code through their local repeater (ker chunk, ker chunk), and packet people have managed to cook up a REALLY slow version of the internet.

This is progress?

I say, let's ban all but CW operation from the ham bands. Take me back to 1918 again. Only then will we all be true hams.

But then the ARRL pretty much knows that already. They've been working tirelessly for years to take us back to 1918.

do you
>think hams really give a shit if there are some CB'ers who >operate above
28Mhz?

They don't? Great! Then there's no problem! We can all peacefully coexist on
that great 10-meter band.

>There is over a megacycle of band up there, plenty of room for >everyone.

Something tells me your fellow HAMBOS might not feel the same way.

>The REAL LOOSERS are the illegal ops who will never be able >to compete in a
>contest, apply for awards, or even get QSL cards from other >licensed
amateurs. Oh
>sure I'm sure they get a few here and there but most DX would >spot them a
mile away
>and I think most wouldn't bother to have a QSO.

Did you ever stop to think that maybe they don't WANT to do any of these
things. Maybe they just want to TALK to other people, in plain English, and
(heaven forbid) about something besides "my rig is", "my antenna is", "your
signal is", "my 10-10 number is", etc. This is why many hams become bored with
"their" bands and go freebanding whenever the band is up.

>As far as doing something about it,
>why would I care? Most CBers operating out of band don't know >what their
doing and
>really have no effect on my operations on 10m.

Fine. Then we can all get along.

To:

Mr "secret agent" who carries a talkie-walkie that is not really a
talkie-walkie (stupid guy boasting about his VHF as if it was a 48
caliber on his Web Page!!)

Mr Secret Agent,

I wonder how you got the advanced licence when you don't even know
the basic of the basics. Geez, I knew they were giving licences these
days to almost anyone in Canada but that is really TOO MUCH!!!!!

Since you are in Mc Gill, one of the best Engineering Universities
in Canada you should go to your very nice library and consult those
things on the shelves: they are called BOOKS. If you don't know
which book you need there is a nice lady there to help you find it.
Or you can follow one of your own links to get a card:

gopher://VM1.MCGILL.CA:70/0-BBS/CW99%3A@INF.LIBCARD

Signed:

A totally disgusted VE2GMI

PS:
I don't carry a secret talkie walkie in my pockets but I know what a
dipole is: A Nanchaku double pole used to stop stupid hams.

Like anderson, I suggest you learn to read better. anderson, in his own subtle fossilized way does insult. He's pretentious at best and is quite impressed with himself and his recollection of how things should be according to him. He has been repeatedly corrected when he is in error and then insists despite the facts that all others should kowtow to him due to his advanced life skills....In other words, we should all allow him his bullshit as he has the wisdom of the ages.

His consistant whining about what is proper to be posted has met with little comment from his nocose tester faction and I for one am tired of it.

>
> Is the problem that you lack the mental faculties to debate him or is
> it simply disrespect for your elders?

I have greta respect for my elders, I have no respect for andesron. Have a problem with that?? As far as debate...anderson would make a great amatuer, he spends hours getting a point across when minutes will do, all very tedious and tiresome

Don't let your Mom see your
> postings she will surely be embarassed she didn't raise you better.

She raised to to be afree thinker and to speak my mind. To quote Carl, if you don;t like what I have to type, too damn bad.

Something sounds wrong with this equation.

Let's turn it around for a moment. What would these "hams" be called
if they were all coded, Extra-class hams who refused to help other
hams who happened to be codeless techs?

Lids? Assholes?

The behaviour you describe is simply inexcusable, and is directly
against the spirit of amateur radio. It doesn't matter what the "reason"
or mental "justification" is. For instance, while I personally disagreed
with the creation of a codeless tech license, I've never refused to give
any help to another licensed ham (coded or not) when asked.

Your "no-code techs" don't sound like very good hams, at all. Instead,
they sound like a bunch of PhD assholes with their noses up in the air.

SB DX @ WW $OPDX.336
Ohio/Penn DX Bulletin No. 336

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 336
BID: $OPDX.336
December 22, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1HRW, W1EKT, WB2RAJ/WB2YQH & The 59(9) DXReport, W2CE, K4MD, K4ZW, KI4RU, N6RT, K8JP, K8YSE, DL3KUD, F6AJA & LNDX, HB9HFN, JA6VZB, LA4KQ, OH2BVE, OK1KT, VA3DX, VK4AAR and VE9AA for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy Holiday and Season's Greetings". Also, we would like thank the many who have contributed information over the year (there are too many to list). Without them there would not be an OPDX Bulletin.

8P, BARBADOS. Glenn, VA3DX, reports to OPDX that he will be active again as 8P9DX, from January 18th to February 1st. His time and activity will included the CQ 160 Meter CW Contest (January 23-25th). He will be active on all bands. QSLs should be sent to VA3DX or VE3ICR and not to the 8P QSL bureau!!

CU1, AZORES. Matt, DL3KUD, will be going here again between December 29th and January 7th. He will be active from Santa Maria Island (IOTA EU-003) as CU1/DL3KUD. His planned operations will be on the Low-Bands (especially 160m) and the WARC bands. Activity will be on CW and probably some RTTY (his first steps in RTTY, please be patient!). His suggested frequencies (+/-QRM): 1834, 3504 (QSX 3527), 7004, 10104, 18074, 24894 kHz. QSLs will be answered via bureau. If possible, do not send any QSLs direct.

DXPEDITION PACIFIC 98' is what the main sponsors (ALCATEL CZECH and the Czech DX Foundation [OKDXF]) are calling this operation. Members of the OFDXF will be heading for the multi-stop trip to the Pacific with the following itinerary: Departure is from Praha
Feb 18 - to Frankfurt and the same day land in Los Angeles
Feb 20 - from LA to Papetee/ Tahiti

Feb 24 - from Papetee to Rarotonga and the same day flight to
Aitutaki atol
March 4 - from Rarotonga to Tonga via Nadi (the same day)
March 14 - from Tonga to W. Samoa
March 23 - from W. Samoa to Fiji
April 1 - from Fiji to Hawaii and then to Europe.
If possible, the group might divide during the stop on Western Samoa and try spend few days on American Samoa. Operators will also have a license for Rotuma Island, but due to transport problem, nothing is sure. The operators will be OK1TN, OK1KT and OK1VD. They will be equipped with PAs as well as beams for the WARC bands and 20-10 meter and a vertical for the 40 meters band. If possible, at least two stations will be on the air. Callsigns will be announced later, and a all mode operation is expected on the usual DX frequencies. QSL information is via: OKDX Foundation, P.O.BOX 73 Bradlec, 293 06 Mlada Boleslav, Czech Republic. ADDED NOTE: During the process of planning there appeared a possibility to activate Midway Island for a week or ten days. Unfortunately, it could not be possible without additional charges (not very high - it is only a hop from Hawaii), so any donations would be very appreciated.

HB0, LIECHTENSTEIN. Kazik, DL2SBY, will be active from here December 27th through January 3rd. He will be active on both CW and SSB. Check the DX Nets on 14226 or 14247 kHz. For CW, look for him at the bottom of the band edge. QSL via homecall.

HP, PANAMA. Gerard, F2JD/HP1XBI, is headed back to France after more than 21000 QSOs. He will be back in Panama in the middle of January for two more months.

IOTA NEWS. Herve, F5RMY, and some other operators will be using the callsign TM5CRO from Porquerolles Islands (IOTA EU070) from January 14-20th. They will be active on CW and SSB from 160-10 meters. QSL via F5RMY.

IOTA SURVEY BE CONDUCTED. Chris, N1HRW, reports, "The Islands on the Web Website is conducting a web-based 'Top Needed IOTA Islands' Survey. This survey will be used to generate a list of the most needed IOTA islands in the world and the percent of IOTA chasers needing them. IOTA Chasers can take part in the survey by filling out a form on the IOTW website at: http://islandchaser.com (go to the "Survey" section of the site). The IOTA need list form can be E-mailed to "n1hrw@islandchaser.com", or send the list to Chris Taron N1HRW, 607 Harwood Ct., Champaign, IL 61820. The survey has been ongoing and runs until 0000z January 10, 1998. Survey results will be displayed on the site on Jan 10.

NEW OFFICIALS. The Carolina DX Association held elections for 1998 at their annual Christmas dinner and meeting. The following will serve for 1998: President - Joe Simpkins, K4MD; Vice-President - Cliff Wagoner, W4WN and Secretary/Treasurer - Gary Dixon, K4MQG. Also, serving the Club for another year as the editor of their monthly newsletter will be Don Daso, K4ZA. The Pileup, their newsletter, is on the internet at the

URL address: http://www.cdxa.org

QSL INFO AND NEWS.....
Fernando, EA4BB/D2BB, reports to OPDX that the QSL route for D2BB is now Joe, W3HNK. He states he will be sending him all the logs and will keep on doing so in the future.

SPEAKING OF JOE! Joe, W3HNK, recently gave Doug, N6RT, a list of all the stations he handles QSLs for. Hope this will be useful for everybody: 1X5AA...4S7DA...AP2TJ...BV2BI...C51A...CM8TW...CO8TW... CO5GV...CO3CL...CT1BOH...CT4NH...CW6V...CX5X...CX6VM...D2BB...EA8AK... EK6GC...ER5GB...ER5WU...ES5MC...EW1TZ...EW3LB...EY1ZA...FM5BH...FS5UQ... HL5KY...HL5BTF...HR1SAX...KP2A...KP4KD/HK3...NP3D...NP4A...OM7DX... P3A...P40E...PJ7UQ...RA2FZ...RA9CKQ...RW9WA...RW9QA...RW9RF...RX9FM... RA0FU...RS0F...SM7CRW...TG9AWS...TE1C...TI0C...TI1C...TI2CF...TI3CF... TI4CF...UA9CUA...UA9OS...UA0AZ...UA0MF...UA0FZ...UK7F...UK8FF...UK8OO... EZ8AI...UN5J...UN7FK...UN7FZ...UP6F...UP0F...US7ZL...US0HZ...UT5JDS... UG6GAW...VP2VFW...VP5JM...VP9AD...VU2ZAP...WP4C...YO3AC...YS1RRD... Z24S...ZP5PT...ZS4PB...ZP0R...ZP0Z...

N4BQW/KH5 PALAMARA QSLS. Mac, WA4FFW, reports that the cards received to date for the recent operations are in the process of being verified, and it is expected that all cards will be mailed by the middle of January and should be in everyone's hands certainly by the end of January. It is apparent that Chuck had some help in the form of a pirate. Mac reports that he has observed cards for days Chuck was not on Palmyra Island. Chuck did not operate from Kingman Reef, so contacts with N4BQW/KH5K are definitely no good. Mac asked for everyone to be patient as this is the Season and everyone is very, very busy. (TNX Mark McIntyre)

QSLs for JW5VK, JW1BJA and JW4KQ, which were active during December 12-15th to Svalbard, Spitsbergen Island (IOTA EU-26), the Longyear Town, should go to the following QSL Managers: JW5VK and JW1BJA via LA5VK; JW4KQ via LA4KQ.

QSLs for the recent JY8ZW operation go via K4ZW (ex KE9A):
Ken Claerbout, 10 Clover Hill Dr., Stafford, VA 22554

Z21AV CORRECT ROUTE AND ADDRESS REPORTED. The correct address for this station is: Ron Peacock, POB 631, Kwekwe, Zimbabwe, Africa

CY9AA QSL CARD STATUS. Mike, VE9AA, reports in a brief note that all the artwork, pictures, etc. have finally been done up and couriered to their QSL-card sponsor, WJ2O, a couple of weeks ago. Mike states, "Dave is likely very busy during the holiday season, so please be patient waiting for your CY9AA VHF & HF cards. Once I get them back from Dave, I intend to work on them every weekend I am home. I am presently attending college AWAY from home, so I won't be able to get them out probably as quickly as I would like, but they'll get out eventually. (FEAR NOT!)"

VK0ANARE (Revised route again!). Alan, VK4AAR, informs OPDX that Tom Stokes, VK0ANARE, has now returned to Australia from Macquarie Island, and regrettably, he has made a sudden decision to handle his own QSL cards for that operation. Alan states, "I have no control over his decision (which I suspect are a bit rash). I hope the DX community will be able to keep up with his changes. I will send him all the requests that have already come to my address, there is no need to re-QSL! Effective IMMEDIATELY the address for VK0ANARE is: Tom Stokes, c/o VK1AUS, POB 2063, Kambah Village, ACT 2902, Australia." Alan is still the manager for VI0ANARE. They are totally separate operations. VI0ANARE was from 1st July 97 until 23rd October 97. VK0ANARE was from 25th October to 31st October 97. The direct address for VI0ANARE is: Alan Roocroft, c/o Post Office, Dalveen, QLD 4374, Australia (Bureau cards go ONLY to VK4ARB....not VK4AAR!).

SOUTH PACIFIC DXPEDITION. Cedric, HB9HFN, informs OPDX that he and HB9DLZ will be active from Tonga and Western Samoa. Details are as follows: From Tongatapu, they will be there from February 5-10th and sign A35LZ (HB9DLZ) and A35FN (HB9HFN). From Western Samoa, they will be there from February 10-23th and sign 5W0LZ (HB9DLZ) and 5W0FN (HB9HFN). They will be especially active for Europe and mostly on CW (80-10 meters). QSL via home call (via bureau preferred). For more details see: http://www.qsl.net/hb9hfn/

T88, BELAU (SSTV activity). Tosy, JA6VZB, is planning to be active as a Mobile SSTV station during the SSTV contest (January 2-3rd) as T88JA. The contest exchange is: send your original picture and serial number. QSL via bureau to JA6BSM. (PLEASE send it via bureau. Every QSL will be submitted to bureau.)

TG, GUATEMALA. Toni/OH1TD, Heikki/OH3JF, Hessu/OH6XY and Raija/OH7LIX will be on the air from January 18th to February 5th (1998). They will arrive in Guatemala on January 16th, and their flights back are on February 6th. They will possibly be assigned with the TG0OH callsign (to be confirmed later). They will always operate split and suggested operating frequencies are as follows:
CW - 1827, 3507, 7007, 10103/10108, 14007, 18077, 21007, 24897 and 28007 kHz
SSB - 1840, 3789, 7045, 14195, 18145, 21295, 24945 and 28495
RTTY - 14088, 21088 and 28088
For lowband operators, the following sunset and sunrise times apply during their DXpedition to TG-land: sunrise between 0033-0030z and sunset times 1149-1158z. Their equipment includes: IC-730, IC-735, IC-751 and TS-690. Linear amplifiers are Heathkit SB-1000 and Tokio HI-Power HL-700B. Antennas will be 2 phased HF2V's - like in XF3/OH3JF expedition where their 80m signal in Europe was very strong with this antenna set-up. In addition they have a Cuscraft X7, A3WS and R7000. For top band they have two antennas and for some other purpose G5RV. They will operate from SanBenito which is at the lake, Lago Peten Iza. This QTH is on the northern part of Guatemala, and there is a clear view over the lake towards Europe, as the stations will be located by the lake. QSL via the bureau or direct to calbook addresses: RTTY via OH6XY and CW/SSB via OH3JF.

V2, ANTIGUA. Operators Bob/AA1M, Jim/W1HL, Tim/KA1MID and Mike/W1USN have plans to vacation and operate from Antigua from February 23rd to March 2nd (1998). They currently have not been issued callsigns. QSLs can be sent direct to each Op or via bureau.

V31, BELIZE. Joe, K8JP, and his XYL Beverly are currently on the road driving to Belize and expect to arrive around December 23rd. If all goes well, he states he will start operating as V31JP on Christmas Day, December 25th, and run through January 12, 1998. He plans on participating in the "Stew Perry Top Band Challenge" (December 27-28th). Outside of the contest, he will be on mainly 160, 80 and 40 meters. Look for him on 1827.7, listening up 2 kHz. When the band is open to Europe or Asia, he states that he will give them priority. The same applies to 80 and 40 meters, 3507.7, 3527.7, 7007.7 and 7027.7 kHz, listening 2 kHz up when the band is open to Europe and Asia. He will operate some 75 meters SSB in the DX window. Joe will be checking/moving to 160 on the half hours. He suggests that when working him on 40 or 80 meters tell him that you would like to work him on 160 meters before he goes to 160 meters. Please QSL via his new address: Joe Pontek, Sr., 26441 Devaney Rd., Arcadia, IN 46030, USA.

V4, ST. KITTS. Halvard, LA7XK, will be active in the first of the new year (January 4-17th) as V47XK. Look for activity during his mornings and evenings. QSL via homecall.

5686. A-99 Antenna Problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-22 00:00:00 UTC
From: Nat Heatwole <heatwole@clark.net>
Message-ID: <67mmf7$fc4@clarknet.clark.net>
Source record: 183725

Hello. I have an Antron-99 (a.k.a. A-99) made by Solorcon that runs on 10-12 meters. I currently use the antenna with an 11m radio. But soon I hope to get into Amateur and I would like to use the antenna as both an 11m and 10m antenna. Will this work ok? Is there any way that I can use it for both 10 and 11m without a tuner? Perhaps by putting something in the feed line? I'm not interested in climbing onto my roof every time I want to change meter bands to adjust the antenna. Any help is appreciated. Thanks in advance!

Two True Stories From WN5FAF

I had passed my Novice exam and was waiting for the FCC to send the precious document to me. While waiting, I assembled a Heathkit HR10B all-band receiver. Finished it on a Tuesday night. We were working long hours at this new company, so I didn't have much chance to use it until fairly late in the evenings. It worked well on 80 and 40 mtrs. I could hear a few things on 20, but not much. Fifteen and ten, however were as dead as rocks. Next day I called Heathkit from work and asked for help. First thing the engineer asked was "Did you buy the calibrator/marker?" Yes. "Does it work?" Yes. "Can you hear it on all the bands?" Yes, but I can't hear anything off the antenna. He sat there in stunned silence, stumped, I was sure, by the difficulty of this technical problem. "What time of day are you listening?" Oh, around midnight or so. We've got this new baby-- He stopped me and very patiently began to explain about ionization layers, the effects of the sun during daylight hours, the refraction of higher frequency waves, and so on. With each word I shrank another two inches, but it was the best lesson on propagation I've ever heard. Propagation of radio waves, that is; I had the other kind sort of figured out already.

Back in my Novice days, the 40 mtr. CW segment allotted to us was 7.150 to 7.200 MHz. All transmitters had to be crystal controlled. Not wanting to spend a fortune on crystals--each one cost the equivalent of one hour's pay--I bought only one. I had heard of the severe penalties that all the FCC monitors imposed on out-of-band operation. I was sure that the FCC had as big a budget as the CIA and that thousands of FCC monitoring stations were listening just outside the segment edges for a very faint CQ from someone with a WN5FAF call sign. I decided to play it very safe. I would order my crystal for the exact center of the Novice segment, 7.175 MHz. The license came. I called CQ. Nothing. I called CQ again and for several days running. Nothing. Having been burned by the receiver problem, I was pretty sure that the transmitter problem was mine. It was not until a few weeks later that I learned that 40 mtrs. is a SHARED band (with the COMMUNISTS, no less!) and that Radio Moscow's transmitter was tuned exactly to 7.175 MHz.

The moral, if there is one, to these stories has to be that we hams should never let anybody else with degrees in mechanical engineering and English play in our sandbox. Let 'em put up the antenna towers, maybe, or criticize our spelling when we use our CW abbreviations (HW WX UR QTH OM?), but don't let 'em talk or pound on a key; those guys can be dangerous!

Regards,
Jim Chumbley, N6UF (ex-WN5FAF)

>? Is there any way that I can use it
>for both 10 and 11m without a tuner?

Yes. These antennas have fairly broad coverage. I found mine to exhibit a 1.5:1 maximum SWR over a 1.2 Mhz chunk of spectrum. By tuning it for resonance at 27.900, I am able to cover all of the 10m Novice/Tech-Plus band, plus SSB CB on the usual channels of 30-40. And of course, it tunes up even better on the freeband ;-)

>affairs there is a fool or simply wants to be distructive. There would
>be NO ham radio if the ARRL had not been there.

Fact: 40% of the amateur 220Mhz band was taken away in 1989 and reallocated to commercial use. The ARRL was DIRECTLY responsible for this by stubbornly refusing to endorse ANY sort of code-free license as the FCC had requested. The old, white men in Newington wouldn't even consider the Communicator class, which was to be FAR more restrictive than what eventually became the no-code Technician license. Result: loss of frequencies. Are you going to allow your so-called "voice of amateur radio" to repeat the same mistake in 1998?

> 73, Cecil, W6RCA, OOTC

Cecil has *really* gotten caught up in this Incentive Licensing bashing. He must have been inactive through most of the 50's and 60's.

Undoubtedly he, like me, was a "victim" of the realignment of priveleges, where segments were removed from all but the Extras, and everyone else had to "work their way back" to the privileges that all licensees, General class and up had previously enjoyed. How did this come about?

It started in the early 50's when the FCC decided that there was no reason to have separated privileges for different classes General and up, and therefore awarded all amateur privelieges to all classes (except Novice and Tech.) At the same time, they discontinued issuing new Advanced licenses, although anyone holding one could keep it and renewals were allowed. So basically, the General class was "the" HF license, with the very few Extras issued being only to those rare individuals who "wanted a challenge" since no additional privileges were accrued with the license. This all occured about 1952. (There were *very* few Extra Class licensees in those days- I don't have an old callbook to check the 50's and 60's, but when I passed Extra in 1970, there were between 4 and 5 thousand.)

So what happened then? Unless one just wanted the prestige of the Extra class license, there was no Incentive to do much of anything more once the General class was attained. Guess what--most hams did just that--nothing more. Ham radio was mired in a case of the doldrums, a *real* case of stagnation.

What to do, to get hams studying and upgrading their knowledge again? The "Incentive License Plan" was the answer selected. Band segments were withdrawn from General and Advanced class licensees, and the "Incentive" was to regain them by upgrading your license, and in so doing, your knowledge and skill levels.

Well, it worked for me. I had been upgrading my knowledge pretty well steadily all along, with military service electronics school, and 5 years in military electronlcs, work in Public safety communications and broadcast engineering, plus lots of ham radio including building gear. But I still had the Conditional/General ham license that I first obtained in 1957. So I went to work on the study material and W1AW code practice and upgraded my license. Many, many others did the same.

Many oldtimers, who were licensed Advanced way back, also lost privileges of very long standing. Considerable bitterness was directed toward ARRL because of this loss, some of which continues to this day. It would have been much better to have made some type of accomodation for these older hams, even "grandfathering" them, but no additional frequency segments were available to allocate, and it was decided to let them upgrade also. Many did not, and some of the survivors are still, to this day, bitter at the ARRL for this perceived injustice. I understand their position. They had earned full amateur privileges many years previously and then years later, had them taken away without, as they saw it, reasonalble justification. I would feel the same today if it happened again.

But the No-Code advocates want the exact opposite. They would have ham radio go back to where *anyone* could easily obtain full HF access and no incentive to learn and earn further would exist. At the same time, in contradiction, they insist everyone upgrade their knowledge and electronic skills. You can't have it both ways.

In ham radio, one "learns to earn" privileges. Nothing works better. Fifteen years of "same privileges" licenses brought on "Incentive Licensing". Thirty years later it is still working as designed.

Fact, huh? I wasn't aware that the ARRL controlled frequency allocations.
All this time I thought it was another government agency.

Jeff, I play with CB from time to time. Ususally it's just for comic value,
sometimes so I can relieve stress. I never operate CB or any other service
illegally. I was first licensed in February 1987 and never fooled with a CB
until June of that year.

Nope. Personally, I think you should have to demonstrate that you can change a tire, find the dipstick and top off the oil, check the tires, etc. before you get a drivers' license. Be a lot less accidents and stranded vehicles in unsafe locations on the road that way. I'll be darn sure my daughters can do all that before they hit the road in a few years.

Then again, the more of these CB clowns we let monkey around inside a KW amp, the more we let try to put up skyhook antennas under power lines, the more will fry themselves, and we won't have to worry about it. Sort of like evolution in action.

I don't know of any such lawsuits. I doubt if they would get anywhere,
given the FCC's efforts to ensure safety.

By the way, Amateur's have little to fear, as far as RF levels go. Even the
most powerful station with a high gain antenna can easily meet the field
density requirements.

Visit the FCC web page at www.fcc.gov. They have a handy supplement that
was designed expressly for Amateurs.

Well, we might as well eliminate the theory questions as well. After all, with the published question pools, there is no need to understand electronic theory. Nor is there any need to build radio gear - you can buy anything you want.

That just leaves regulation knowledge - and that shouldn't require a test, just an affidavit from the person that they understand and will abide by the regulations.

Hm, isn't that what used to be required for a CB license?

Good point, Bob. You are right.

Now it must be said, that both the British and the Americans do AWFUL things to the language.

Having lived in England for 18 years and then America for 29 more, I can testify that the yanks butcher it a bit more than the "Limeys" do.

I will agree that many Americans do not spell properly and often use awful grammar. Even teachers and news announcers on radio and TV in America use dreadful English at times. Public signs are often mis-spelled.

If anyone wants a guide to pronunciation and a lexicon of ENglish and American terms that is most amusing, I offer my free book via the Internet at:

http://www.mnsinc.com/bry/english.txt

or you can e-mail me for a copy!

Cheers to all - Bry (G3XLQ / AF4K)

No. The theory is still relevant to communication in 1997. Morse code is not. In order to legally operate a motor vehicle, you obtain a driver's license. The information you are tested on is relevant to the cause. Rules of the road and driving skills are covered; using a hand-crank starter is not. Neither is the usage of a manual transmission. Why not? Because these skills are no longer relevant or necessary for the successful and safe operation of a motor vehicle in 1997. Even though some choose to use a manual transmission, and that is fine. It is by choice, but not required for obtaining a government-issued license to use the public highways. This is how amateur radio licensing should be as well. Make sense?

In today's "sue thy neighbor" mentality, the action doesn't have to have merit. Just money. How many hams can afford to defend themselves against such a lawsuit? The prospect of court costs, attorney fees, etc., is usually enough to force the ham to cease operations, regardless of whether or not the claim against him is legitimate. I've seen this happen time and time again. Blame the legal system in this country which encourages frivolous lawsuits.

What a crock of crap.... No one ever made any movement whatever to 'force' you to get any class of license whatever. You did it simply because it was what you wanted to do, now you are crying because.....Yeah, why are you crying??? You are just wanting to get in on the act of being discontented, like all the no-coders. You wouldn't be one to the dudes from 27 mc would you, Amor? There are lots of crap stirrers around these days....seems some people just can't be contented unless they are exploiting the unhappiness of the discontented...you sure do fit the profile. So you 'say' you have an extra class license. Well, it's time to prove it, Bud. Otherwise you are just a damn liar here only to further excite the malcontents to even more dissatisfaction. I'm saying you are a damned liar, pure and simple. If not, prove otherwise. Even if you do, you are still one of the Freebanders aren't you---there are some hams there, we know. Whats the matter, what are you afraid of? If you have nothing to hide, why hide?

Anyone who was around in 1968 knows full well what ham radio had become when Incentive Licensing was started. The very thing all you no-coders bitch about in ham radio today was much worse at that time. You would replace incdntgive licensing with a freebie for everyone. The ideal solution.

Most of this no-code movement is pure, simple discontentment because of personal --personality-- problems---mainly laziness and the old "I know best" syndrome.

If even a small portion of the time and effort spent carping and objecting to the requirements was spent in actually attempting to meet those requirements, your reason for all this discontentment would not exist.

The ARRL is -and always has been- the ONLY voice we have ever had in Washington and anyone who says ARRL hasn't been looking out for our affairs there is a fool or simply wants to be distructive. There would be NO ham radio if the ARRL had not been there. The fact that a minority of hams are members speaks poorly for the majority of hams who don't know the very source of their own support and indeed existence.

It should be no surprise that today--the age of instant gratification without effort--that so many should be so blind.

If your point was to continue the code/no code debate, why not stick to that debate. Apparently from Masa's previous responses, not only is code useless, but also the theory portion of the test is also if Masa memorizes the questions and answers and after passing the exam promptly forgets everything. Next, Masa will probably suggest a license application be packed in every radio box and you sign and mail in the form to obtain your amateur license. Why bother with an exam at all if you're going to forget everything after you take the test...

5723. TRUNKER.EXE now supports PCR-1000, other COM ports

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-22 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34a875f3.144059126@nntp.atlanta.com>
Source record: 183787

If anyone is interested, I've modified TRUNKER.EXE to support
the Icom PCR-1000 radio, allowed the slicer to be placed on COM ports
other than COM1, plus a handful of other mods.

I don't have a website, but I'll be happy to e-mail it to
anyone who wants a copy. Even better would be e-mailing it to someone
willing to host it on a site.

5725. Icom PCR-1000 Commands: The List So Far

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-22 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34ab79cb.145042590@nntp.atlanta.com>
Source record: 183789
Cross-posted to: rec.radio.amateur.misc,alt.radio.scanner,rec.radio.amateur.scanner,rec.radio.amateur.equipment

For those of you who want to write your own applications to control the ICOM PCR-1000, here's a little help. This is what I've decoded so far:

Version 1.00
12/21/97
John "Chris" Wren, KD4DTS
jcwren@atlanta.com

Assuming that you've started by turning on power to the radio, the radio comes up at 9600 baud, and continually sends H100<cr><lf>. This indicates the radio is alive, but "off". An application should then send H101<cr><lf> to the radio to turn it on (DTR also needs to be asserted). The radio will then reply with "G00". There may be some action regarding the control lines (RTS, CTS, DSR) here, but I didn't record that. The ICOM application then sends G105, which sets the serial port rate to 38400. At that point, you're ready to rock'n'roll. You'll need to set the volume and squelch before you'll hear anything.

Sending commands to the radio is not time critical. If you have a terminal program connected to the radio, you can do most of this by hand. Note that most commands need to be terminated with a <cr><lf>.

I don't guarantee the accuracy, but I feel pretty good about what's here. There are a couple of commands that I have no idea what they do. Some of the commands allow interrogation of parameters, such as the GE? and GD?. These always return the same value, and may say something about what country the radio is configured for.

I don't see any command that gives away what version of the firmware you have. That would be a nice one to find (of course, there will only ever be one release, because if there was a bug (and Icom *never* ships radios with bugs in the) it would be a feature, and couldn't be changed.

There are a couple of commands that I have at work that I will add to this list. They dump some values that seem to have something to do with the band-scope functions. When I get around to picking those up and checking them out a little further, I'll post a revised list.

There are 4 surface mount resistors in the radio, near the one corner. We replaced these with 4 DIP switches in an attempt to figure

out if the cellular block could be defeated. To date, no success.
There are diode packs on the other side of the processor that might do
something, but the person I borrowed the radio from was paranoid
enough about the change with the resistors. Anyways, I don't have the
results of interrogating any registers with the DIP switches in other
than the default position.

All parameters are hex values, but are sent as ASCII. I.e.
(from the chart below), J40 is the volume register. It requires that
2 bytes follow, which are value to set the volume to. 0x00 is the
lowest volume, and is sent as ASCII-0, ASCII-0, not <0x00><0x00>.
0x7f is the midpoint (in theory. It's non-linear), and is sent as
ASCII-7, ASCII-F.

Power H1xx
00 = off
01 = on
H100 is sent whenever the radio is off

Power Inquiry H1?
returns 00 if off
returns 01 if on

Results G0xx
returns 0x00 if command good
returns 0x01 if command bad (seemingly)

Baud Rate G1xx
00 = 300
01 = 1200
02 = 4800
03 = 9600
04 = 19200
05 = 38400

Signal Meter G3xx
0x00 = off (does not require LF)
0x01 = on
0x02 = numbers sent as binary
0x03 = on, numbers sent as binary

Signal Meter I1?
returns 0x00 - 0xff

Volume J40xx
xx is 0x00 - 0xff

Squelch J41xx
xx is 0x00 - 0xff

IF Shift J43xx
xx is 0x00 - 0xff

AGC J45xx
0x00 = off
0x01 = on

Noise Blanker J46xx
0x00 = off
0x01 = on

Attenuator J47xx
0x00 = off
0x01 = on

VSC J50xx
0x00 = off
0x01 = on

Tone J51xx
0x00 = off
0x01 = on

Frequency K0fffffffffmmFF
fffffffff is frequency
mm is mode
00 = LSB
01 = USB
02 = AM
03 = CW
04 = (possible RTTY? Nothing sets this value)
05 = NFM
06 = WFM
FF is filter
00 = 3K
01 = 6K
02 = 15K
03 = 50K
04 = 230K

Unknown Commands
I0?
I2?
I3?
G2?
G4?
GE?
GD?

John "Chris" Wren, KD4DTS

Item #1
Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #2
Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

In this season of hope, unfortunately the news on
our TV's and in our newspapers reminds us daily
of those who seem to have so little reason for hope.

The most heartbreaking reminders are images
of the children; the starving skeletons in Africa,
the orphaned, wounded and homeless in eastern
Europe, and so many others here and all over the
world.

Please take some small moment during this holy
season to pray for these little ones who most
desperately need the gift of hope.

In this spirit Colleen and I wish to share with
you the verses below. (With apologies to the author,
Ina J. Hughs of the Children's Defense Fund, for my
amateur adaptation.)

73, de K0HB & N0PGL

A PRAYER FOR THE CHILDREN

Please pray for all the children, but especially those -
who stare at news photographers from behind barbed wire,
who can't run down their street in a new pair of sneakers,
who never play "hide and seek",
who are born in places where we wouldn't be caught
dead (but they too frequently will be),
who never go to the circus,
who live in an X-rated world.

Pray also for those -
who sneak popsicles before supper,
who erase holes in math work books,
who can never seem to find their shoes.

We pray for children -
who bring us sticky kisses and
fistfuls of wilted dandelions,
who hug us in a big hurry and forget
their lunch money.

And we pray for those -
who never get dessert,
who have no safety blanket to
drag behind them,
who watch their parents watch them die,
who can't find any bread to steal,
who don't have any rooms to clean up,
whose pictures aren't on anybody's dresser,
whose monsters are real.

We pray for children -
who manage to spend all their allowance
before Tuesday,
who throw tantrums in the grocery store and
pick at their food,
who like ghost stories,
who shove dirty clothes under the bed and never
rinse out the tub,
who get visits from the tooth fairy,
who don't like to be kissed at the school bus stop,
who squirm in church,
whose tears we sometimes laugh at and whose
smiles can make us cry.

Pray extra hard for those -
whose nightmares come in the daytime,
who will eat anything,
who have never seen a dentist,
who seem to have the wrong color eyes
or hair or skin,
who aren't spoiled by anyone,
who go to bed hungry and cry themselves to sleep,
who live and move, but have no being.

And pray for the children -
who want to be carried,
and for those who must,
for those we never give up on, and
for those who won't get a second chance.

Pray for those we smother in love -
and for those who desparately grab the
hand of anybody kind enough to offer it.

- - -

Let's reconstruct the previous statement to reflect it's true
meaning:

"Most of this PRO-code movement is pure, simple discoMFORT because
of personal --personality-- problems---mainly laziness and the old "I
know best" syndrome."

Perfect discription of the so-called pro-code "movement." Had your
prunes today, Dick?

>
> If even a small portion of the time and effort spent carping and
>objecting to the requirements was spent in actually attempting to meet
>those requirements, your reason for all this discontentment would not
>exist.
>
> The ARRL is ...

Basically true

> ... -and always has been- the ONLY voice we have ever had in
>Washington ...

I don't think so, Dickster: Over the years many hams have
contributed to the care and feeding of Amateur Radio by communicating
and working with -- or being -- federal representatives in Congress.
To say what you said is a slap in the face, IMO, of all those who have
contributed over the years.

> ... and anyone who says ARRL hasn't been looking out for our
>affairs there is a fool or simply wants to be distructive. ...

ARRL has done, and still does, very good work. However: Some
would term and treat the ARRL in the manner of a religious icon,
apparently without error, the only "truth" that can do no wrong,
regardless of what it does. The only "fool" or "destructive" person
is the one who entrusts the farm to any human-based entity without
some form of on-going evaluation and modification system in place
(i.e., checks and balances and constant review with modification based
on the review results).

> ... There would
>be NO ham radio if the ARRL had not been there. ...

Conjecture, Dickster: How do you know? Let's take a look at your
current Extra Class Seer's license, shall we? Or is that license also
mired in stagnation and swampwater?

> ... The fact that a minority
>of hams are members speaks poorly for the majority of hams who don't
>know the very source of their own support and indeed existence.

It's sad when a seemingly small number of individuals dictate to
the majority.

>
> It should be no surprise that today--the age of instant gratification
>without effort-- ...

Work ethic, work ethic! The great icon of work ethic! Also known
as: "Don't change" and "My way or the highway!" (i.e., "We've ALWAYS
done it that way!") and "It was good enough for my great-grandpappy,
so it's good enough for me! (Where do I make my 'X' to sign?)"

> ... that so many should be so blind.

Please look in the mirror, Dick. Oops! I forgot: You seem to be
among the blind ... sorry 'bout that! =0)

>
>Dick W0EX
>
>"A cynic is what a realist calls an idealist."

Very true! Pro-coders are definitely 19th century idealists. =0)

That works, and hams were doing that 60 years ago at 45.45 baud, but 74 years ago Nyquist published a paper showing that there's a 6 db advantage to be gained by using mark/space instead. Hams have been a little slow to pick up on that. Irv Hoff was the first to show hams how to take full advantage of that 6 db 40 years after Nyquist's paper was published. Some hams still haven't caught on.

Perhaps you can describe it for those of us that might have
been less active at the time?

>You would replace incdntgive licensing with a freebie for everyone. The
>ideal solution.

That is pure bull and Mr. Carroll knows it. This is just another
attempt to discredit the no-code test movement by trying
to associate the nocode test effort with limination of most
or all testing. It is, as I said, pure bull.

>Most of this no-code movement is pure, simple discontentment because
>of personal --personality-- problems---mainly laziness and the old "I
>know best" syndrome.

Ths is the most pathetic statement I have yet seen from
the keyboard of Mr. Carroll. Amazing, he sees through
some crystal ball into the minds of myself and other nocode
test advocates and has been able to acertain that we are all
the product of "discontentment because of
personal --personality-- problems---mainly laziness and the old "I
know best" syndrome."

Perhaps Mr. Carroll, you can tell us just which of these
problems you ascribe to me... I surely am curious.

> If even a small portion of the time and effort spent carping and
>objecting to the requirements was spent in actually attempting to meet
>those requirements, your reason for all this discontentment would not
>exist.

Once again, Mr. Carroll ignors that many of us have
done just that already and we still hold the viewpoint we do.

> The ARRL is -and always has been- the ONLY voice we have ever had in
>Washington and anyone who says ARRL hasn't been looking out for our

> It should be no surprise that today--the age of instant gratification
>without effort--that so many should be so blind.

Translation: again Mr. Carroll attempts to attack the integrety of
nocode test advocates by saying we are the result of an instant
gratification mentality.

Sorry, but that is just more vague generalizations in
Mr. Carroll's effort to discredit the people, as opposed to the
ideas.

Apparently not in these newsgroups. Amongst the human population it
does seem that folks are a bit nicer this time of year.

I don't know what history books you read, Jeff, but you might look at
200 Meters and Down. King Spark battled on in amateur radio well
beyond 1912. In 1921, QST was still exhorting amateurs to convert from
spark to CW. About 90% hadn't because many amateurs weren't convinced
of the advantages of continous waves, and couldn't accept that a 5 watt
tube rig could beat a kilowatt spark transmitter.

The Transatlantic tests in December of 1921 finally showed once and for all
the superiority of continuous waves over damped waves as low power CW
stations outnumbered the kilowatt spark stations in successfully spanning
the Atlantic. As QST put it, "the slide rule boys had won", and it was down
hill from there for the spark aficionados. But it took a government ban to finally
kill spark on the amateur bands.

And in regard to spark's inability to work at MW and above, I'd note that a fellow
named Hertz was using spark on **300 MHz** in the 1870s. And anyone who has
ever been watching TV when a '56 Ford drove by knows that VHF spark transmitters
work. So your claim that spark won't work at MW and above is so much nonsense.
Spark and arc jammers were heavily used in WWII, even against radar, though
by the end of the war most had been replaced by vacuum tube based jammers.
(Note I didn't say spark worked *better*.)

>around on 11m?

Well, Jeff, I've been a ham for 34 years, and a CBer for only 22 years,
so I'm one who found that CB is a useful radio service despite having
held a ham license for 12 years before getting into CB. The main reason
it is useful is that there are so many more CBers than hams, so there
is always someone nearby to contact. That's particularly useful when
one is seeking highway information, IE road conditions a long way
away aren't of interest, but what's going on a mile or two down the
road is. Even with the growing number of VHF hams, there still isn't
a sufficient density of operators on the ground to satisfy that need
except in the citizen's radio service.

What is wrong with knowledge for the sake of knowledge? One should never stop learning thoughout one's life. Just because the knowledge is old or out of ``current fashion'' does not mean it is not worth learning. One cannot apreciate where one is going without an appreciation of where one has been. I sense many recently don't have such appreciation.

> Should CW be outlawed?

Nope. It is still the lowest common denominator, and should be retained
as a lawfully usable mode just for that reason. It is also quite narrow
in band width, and is useful just for that reason, too.

> Spark is not used anymore. Do we miss it?

I do. If you have never been around it or used it, you don't know
what I mean. It is very broad banded, as originally used, but I would
be of the opinion that it should be possible to narrow it down with proper
tuning circuits such that it would be about like an AM signal in bandwidth.
The reason that the old circuits were so broad is that they were directly
coupled to the antenna. Loose passband tuned coupling would cure that very
easily. There is not much practical use for it, anymore, though.

I have personally used spark sets up to a half KW, and been around a
KW set, and they are a most interesting beast to work and tame.
They are quite noisy at that power, unless quenched or enclosed in
a sound room as used to be occasionally done.

There is ``sweet musick'' to the sound of a good musical quenched gap
or high speed rotary gap that is quite pleasurable to copy, compared
to the plain drone of CW by arc, tube, or transistor generation.
But, then, MCW is not used much anymore, either, except a few percent
in some of the marine shore stations for effect and presence in the
signal.

> --
> Bill Nelson (billn@peak.org)

Bill... I sense you have not actually measured the bandwidth of a spark signal. It is rich in harmonics, true, but those are easily filtered out with passband tuning. The actual bandwidth of a spark signal, if plotted is the bandwidth of the output circuitry. If properly set up, a spark signal is no wider than 50-100 khz under worst conditions, and can get much better than that, about like a broad AM or FM signal. In the ``old days'' the bandwidth was decreed by law to be no more than a certain amount (I forget the exact value right off but it was somewhere around a logarithmic decrement of 0.1-0.2 or such). There were specific instruments ``decremeters'' that were use by the government radio inspectors to check for bandwidth compliance in spark stations. Contrary to popular belief, they are not DC to light emitters.

Jim... quenched gaps are quite silent and can't be easily heard at a
distance of 30 feet or so across a room, even in the larger sizes.
Not all spark sets make thunderous roars.

John,
This is real interesting - thanks. It seems the cellular block may be programed by the software. I have a Japanese version of the radio and it is identical in every respect to the US version as far as I can tell and is not blocked from the cellular frequencies when running the Japanese software. However, it would not receive cellular frequencies with the US software until I began swapping some of the Japan version configuration files. It then started receiving cellular and now even with all US version files it receives cellular. It seems the software may program a flash or e2prom when it first runs - it's not clear

Regards,

FB used to mean "Fine Business". Now it stands for Free Band radio.

This new wave of good skip and propagation combined with widely available "export radios" have turned the entire 25 to 32 MHz band into a great wide expanse of FreeBand activity!

The huge numbers of cheap wideband radios which were prevented from legally entering the USA as CBs are now showing up for pennies on the peso in South/Central America and Asia! Huge numbers of new FreeBanders are populating the recently expanded "Free Band" or FB as it is now known. Previous users of the bands which have been annexed into FB can still use them on a shared-basis.

Yes Amor, I think you hit the nail on the head when you were saying that "good skip and propagation combined with widely available "export radios" have turned the entire 25 to 32 MHz band into a great wide expanse of FreeBand activity". This glut of these type of radios at very reasonable costs have led to this "bootlegging" problem. As long as these export radios continue to be so readily available, this problem will continue to grow...

Somebody tested in the Good Old Days would surely have noticed that the person with the "advanced license" was posting from Canada, which sort of invalidates the whole argument about the US exams.

The fact that the poster is a well-known troll might influence the discussion, as well.

Allow me to correct myself. In my previous post, I mistakenly said:

<<Any multiple of 1/4 wave away from the end will
be a low impedance point.>>

What I meant to say was:

Any ODD multiple of 1/4 wave away from the end will
be a low impedance point.

Sorry for this error.

Actually, it was my understanding that FSK, binary FM, is the modulation used on RTTY. Isn't this so?

Of course a wider bandwidth signal would offer more processing gain, which I surmise was the point of this comment.

What leads you to theorize about this person's sex, or is the "her"
reference some sort of insult?

>(Clue ...did you every see her sign a post with a callsign?)

I reread Part 97 and there is no reference requiring a callsign on the
internet. In fact a callsign would be rather out of place on the radio
anywhere but in the amateur bands. I have to watch it a bit when flying
or operating on the police bands (yes, I am authorized).

>Heck Jerry...I don't even see a call sign by your signature?

Why now that you mention it I just noticed I don't put my call sign in
my sig after all this is the internet and my callsign would be silly.
If you look at my screen name you will find a callsign. Do a little
probing and you might even find my current call.

Did you mean "bit" the bullet? Actually it was more like I was paid quite well to take a "DB" and had a few hours to kill so I drove over to a VE session and voila here I am. Despite having passed the dreaded CW exam I still don't think it is appropriate or benifical to the ARS.

I fully support retaining the CW requirements, but I have to admit that a statement like the above cannot be taken seriously! Those who claim CW is no longer useful (for amateur radio) are also in error.

CW is an excellent mode for DX, low bandwidth, and operator skill in both reception and transmission. And as such, a very useful tool that is worth retaining, for these purposes.

BUT I have no wish to return to equipment that glows in the dark! And the development of advanced modes of communication should always be advanced. After all... Is that what Amateur Radio has always been???

Happy Holidays,

Amor:

I'll say one thing about Incentive Licensing. It sure separated the
men from the boys. The men got over it, took the tests and upgraded
to Extra. The boys have been whining and sobbing over it since
it began in the 60's, and still are today. Sickening.

Several amateur radio stores that I know of are closing -- they don't get lots of customers anymore.

I know one in BC and one in QUE.

One in BC, they are not closing, but they used to have 6 employees two years ago; now they only have 2.

One in QUE, I saw the web saying they are having 10%-50% specials because they don't sell the amateur products anymore in near future.

Look around. There are stores that are closing nearby.

Open amateur radio to everyone. I am not saying give a way the licenses. How about if you make a fair license ?? The CW requirement is not fair. If the no-code technician [basic] can use the HF bands, the situation is not as bad as the one that exists today as far as the closing of the stores is concerned. More people, more fun. More fun, more people. More people, more stores. More stores, more people.

I know old foggies want to stick with their generation, but it won't work !!

If Radio Shack Sells HF Rigs, I am sure there are more people around
in HFs.

Why ?

Because many of us started in VHF by visiting Radio Shack and saw some
VHF rigs !! Or at least we start to get into VHF by using their
excellent (?) rigs !!

If they sell the HF rigs in their showcase, I am sure a lot more
people show the interest and actually use the HFs.

I don't think it's profitable for Radio Shack as not many people
purchase the HF rigs compared to VHF and such, but I am sure it's a
good starting point for advertising amateur HF !!

Not be able to buy a radio nearby is a bad idea... say if you
can't purchase your computer in your area and if you have to mail
order it... then I am sure we have fewer people who use the computer +
the internet nowadays...

Now... where should I take this suggestion to ?? Newsgroups ??

Let me add my 2 cents for what it is worth.

1) lets take a Flash back look at CB

and

2) I know "most" kids' ears are not virgin to the profanity. However,
lets remember they are licenced also youngest I think is 7 Plz correct
me if I am Wrong on age. But folks lets use Some of that long
forgotten Common Sence IF WE DON'T WANT OUR CHILDREN USING THEM THEN
WHY SHOULD THEY HEAR US USE IT. remember HAM RADIO IS PUBLIC AND WE
ARE A SERVICE TO THAT. It is a privilage and an honour to own / hold a
ham call sign NOT A RIGHT.

Now, I am not saying we should get hit for words like Damn, Hell,
Crap, and Screw
However, the demeaning words like B*tc*, sh**,f**h, GD>, MF, and the Like
are rude and does nothing but show the lack of vocabulary we have.

Folks, WE NEED TO CLEAN HOUSE OURSELVES BEFORE WE CAN TELL ARRL TO CLEAN HOUSE! Let us all give ham radio the repect it deserves before We loose it in the lleo and other FCC freq auctions. I enjoy being a ham. LETS NOT RUIN IT.

MERRY CHRISTMAS TO ALL AND TO ALL GOOD QSO'S

5790. Get paid to teach CW

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-23 00:00:00 UTC
From: Joe Denison N9ZLI <misto@iglou.com>
Message-ID: <Pine.GSO.3.96.971223085041.11953A-100000@iglou1>
Source record: 183630

Okay, this message has nothing to do with getting paid to teach CW, but it was something I thought just might grab some attention. Look, people, the CW debate is a dead horse when you get right down to it. Personally, I took the time to learn it so I could pass my 5wpm Tech+ so I could play on 10m. I'm happy with that. I don't care that my best friend is only a tech and can't tell a dit from a dah. It doesn't make him any less of a ham than I am and it doesn't make me any better of an operator than him. I am neither pro nore anti CW. I'm pro-option.

Let me explain. I think that if you are happy to operate VHF and above, then all you really need is your technician ticket without the CW portion. However, if you really want to get down on the HF bands, then knuckle under and learn the code! For cryin' out loud, some of you act as if the elimination of the CW requirement is all you live for. If this is so, then please, go to Walmart and get a life. Others act as if those who don't know code don't belong on the radio at all and you are the only REAL hams. Well, guess what, the FCC didn't see it that way for the year that I held my Tech license, so what right do you have? Really answer this one if you can, I'm looking for some good debate. So the requirements were different when you became a ham, does this mean that the latest radios are any less valid than the tube-filled boatanchors you used when you first got started? Well, if you want to use that logic, then we'd better just go back to sparc-gapping again and try from there.

Really, people, do the pro-coders feel that threatened by the anti-CW front? If so, why? A CW-capable ham can usually operate on frequencies other that those operated on by phone-only hams. If you really want to do something about what you perceive as the destruction of our hobby, start teaching code classes to a high school radio club, or over a local 2m repeater, or anything. Just sitting and complaining about the way things are going to go if we lose CW is not going to do anything but guarantee its loss.

As to the Anti-CW faction, you have some valid points. If we do not do something else to get younger people interested in our hobby, it won't last much longer. I know there are a lot of interests vying for the opportunity to purchase spectrum space from the FCC, and they will sell it if we don't use it. But for you to win this argument, all you need do is remain quiet and allow apathy and attrition to take their toll. Personally, I think it was a great challenge to learn CW, but I haven't used it on the air yet as I can't find anyone who will tolerate my slow sending speed (I send only as fast as I can receive, about 4wpm). But really, you needn't do much of anything. The elder statesmen of ham radio are doing close to nothing to get kids interested in this hobby, so, as is shown very easily in nature, if a species fails to reproduce, it dies out.

Just leave it alone and let entropy do her work.

Now, if anyone can offer any argument for the above statements, feel free to post them, I'm game to talk it up for a while.

Hi Jim,

Well, here is mine. Which after 40 years is still embarassing.

Eight months after becoming licensed as KN5ETX, I finally had the money to get a rig. I bought a Hallicrafters S-85 receiver and ordered a DX-35 from the Heath Co. When I finished building the transmitter I had only a 3710 khz. crystal. I got on 80 meters and called CQ without getting any replys. I decided that 40 meters might give me better results. So, I changed the bandswith to 40, tuned the transmitter and for the next hour called CQ again. Finally little lights came on, I was doubling that 3710 khz. crystal to 7420 khz.

Moral - engage brain before engaging transmitter.

73 and Happy Holidays,
Pat K5AO

5792. Ham radio is not real life

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-23 00:00:00 UTC
From: Xsubmarine@airnet.netY
Message-ID: <349f81db.153405977@news.airnet.net>

Some people treat ham radio as if it were real life. It's not. Ham radio is a bunch of tired old men trying to keep the door shut and a bunch of kids trying to break it down to see whats inside. There's nothing inside. Thats the key. It's like your mother saying don't look inside the presents under the Christmas tree . You look anyway and afterward you say, big deal. You get your ham ticket and then say big deal. Where's the beef? Can't pass cw? Big deal. There's nothing on HF I would kill for. Besides, cw is here or the next decade anyway, so instead of bitching about it, get some code tapes or as I did, go to 20 meters and listen or a couple of months. Before long you will have the code down. If not, if you think code is just a wall to keep you out, you may be right. Many things demand outdated outmoded study. Have you ever used algebra in real life? Ever used any of the Shakspere you had to memorize? Life is full of crap you never use. But if you don't copy squat after the test, so what? I have an Extra and I hardly ever get on CW. I did it because I wanted to see if I could, because that was the fun of it. But like I said, if you don't get past the cw don't sweat it. You're not missing a hell of a lot.

I was first licensed as WN3ZOQ in 1975. It later became WA3ZOQ when the licensing rules changed. Mine is a story about upgrading to General.

In those days you went to take the code and the theory tests at the FCC office near you. Because I lived in Washington DC, I took a bus downtown to 1919 M Street: The main office of the FCC. It looked pretty imposing and scary to a 13 year old. But I was prepared. I even had a fresh spare nine volt alkaline battery for my scientific calculator.

I had to take the 13 WPM code test. They sat me down in a room full of strangers and got ready to copy code for five minutes. I had just this one chance to get it right or I'd have to wait another month.

"Get ready, --Begin!" "dahdiddit dit..." Scribble, scribble, whoops missed a character, it was intense.

A minute or two went by, I began to notice a burning sensation in my leg. I kept going. No second chances here, I thought. By the fourth minute, my leg was really in pain. Scribble scribble scribble, "OK folks, put your pencils down."

I jumped out of my seat. My leg felt like it was on fire. It almost was. That nine volt battery I was so careful to take along had shorted out against my keys. It was so hot that I almost couldn't pull it out of my pants pocket. Yeeeeow.

I sat in relief for a minute. Then I looked at what I'd written. It was nearly perfect copy. Then I took the comprehension test. And whaddaya know?

I passed.

DECLINE? in amateur radio? Well.... just try to find an open spot on 20 meters during the weekend. Or try to find some room on 80 meters at night. I do not think that MORE is better.. in this case.

> I think the ARRL, like most organizations, listens to its members.

No it doesn't. It turned a deaf ear to me when I was a member. That's why I'm not a member now. The ARRL claims to speak for all of the ARS even though they dictate policy based on a survey of 1% of members which is 0.25% of American hams. Let that soak in for a few minutes.

If one were to take CW's postings as representative of the breed,
one would suspect that there is an inverse correlation between
ability to copy Morse and intelligence.

Mr. Slime <slime@radiotelephone.net.ham> wrote:

>1) attract young peoples' attention toward ham radio by not saying
>you must know CW in order to use shortwaves

No concrete evidence has ever been presented to demonstrate that this
is a "problem", or that this "problem" even exists. There has been a lot of
anecdotal claims on the part of the No-Code Agenda, but then again, the pro-
code side has plenty of anecdotal evidence of its own to 'prove' that such
claims by the No-Code Agenda are false.

>2) keep up with high technology -- ham radio is a virtually old
>technology now.

If you want to eliminate CW as a mode because it is "old", then you certainly
must want to eliminate SSB as a mode too, because it is almost as old as CW.

>3) take non-sense CW requirement

Well, I can't make "sense" out of this statement.

Joe Denison N9ZLI <misto@iglou.com> wrote:

>Really, people, do the pro-coders feel that threatened by the anti-CW
>front? If so, why?

Hello Joe,

Most (not "all", because I am sure there are some out there) pro-coders
do not see "no-coders" as a threat. For instance, I treat every ham the
same, regardless of license class.

The No-Code movement is not about treating people differently (although
some people on the no-code side like to try and define the debate in those
terms because it plays on people's emotions and a desire to have everything
"fair"). It *IS* about the continued lowering of standards.

A major problem with the debate today is many participants haven't been
around a long time to remember the great CW debate of the 1980's. Everything
you see the No-Code Agenda presenting today to support elimination of the
code as a HF licensing requirement is just regurgitation from the great
code debate of the 80's. "Our numbers are dwindling!" "There is no
technological evolution in ham radio!" "Thousands of technical geniuses are
being kept out because of the nasty code test!" The list is endless. But,
I can't really blame them -- after all, it worked once (to get a codeless VHF
license) so I guess they should try the same thing again and see if people
are stupid enough to buy a pig-in-the-poke a second time (see, none of the
so-called "benefits" of the VHF codeless license that the No-Code Agenda
"promised" actually ever materialized. There were no hoardes of technical
geniuses. There were no 'technical evolutions'.)

From: rvpel@webtv.net
Message-ID: <67pnpq$aa1$1@newsd-163.iap.bryant.webtv.net>
Source record: 183659

Let's face it...amateur radio is a waste. It serves no real purpose and the operators we hear speaking to each other are saying things that don't need to be said.

So, the way I've got it figured, if I'm going to participate in this futile, pointless activity, I will do so in a way that uses the least amount of natural resources. By using my key, I don't have to speak...and by not speaking, I use less oxygen. This leaves more oxygen for the people who need it to say the really important things in life. This is why I love CW!

5820. Re: How can I have CW QSOs on the Net?

Source record: 183660

George...even if there was a way to do this, I don't think you would get a big response. Oh, I would respond because I love CW mode...but most of the operators I've seen here really don't care for it..I guess because it requires some effort on their part. Like everything else these days, if it's not simple and convenient, no one has time for it. Even most of the CW operators I work won't even use a straight key...it's pure laziness as I see it. Worst part is, they really don't even realize the fun that they're missing!

I've been sitting on the sidelines for a few years now, thinking about getting a license and all that when I finally bought one of the "No-Code" license study books at Radio Shack. The tests are simple, and I'm sure I'll pass the exam without a problem.

So once I was sure I'd ace the written test, I thought about the CW stuff. Now I can tell you that I have no intention of ever getting or using HF gear, nor do I think I'll actually use CW for anything "mission critical".

But I thought it would be fun to learn morse - but for the same reason I'd learn how to make candles from beef tallow or learn how to use a muzzle-loader. Not because there is any "real" reason but because it's just a fun thing to do. Face it, CW is really just a way to prevent idiots from getting on the air. You don't need CW. But listening to 11 meters on Interstate 78 makes it clear that a free-for-all is not the way to go.

So, I'm learning morse. But I'll still carry a Cell phone, and a CB Radio and soon I'll have a nice new HT in my coat pocket. And in a "real" emergency I'm sure it will be phone and packet that is the predominant mode - not CW.

But without some sort of "barrier to entry" there's no reason at all I'd bother with Ham and I'd just get a GMRS system or something. But I know that people on the Ham bands now (and hopefully in the future) at least took the time and effort to train themselves to do more than turn on the radio.

This message was sent with an alternate e-mail address to help me to intercept the inevitable spam that will result from the post. My real email address will be provided to legitimate responses to the message.

I think that will eventually come.
I believe the only problem is in cofirming, eg a signature, that the
card did indeed come from the other station.
However, as the internet does become more common place amounst
amateurs, etc, that process, I think, will come.

If find your comments about not being tested for the other modes, like
packet, to be interesting.
The last amateur exam I took was in 1966 but I have seen them
periodically.
Of the last information circular I saw for the amateur radio exam in
Canada, they are being asked question concerning the new modes like
packet, etc.

Seems like the ARRL doesn't get it. The code (IMHO) is what's makeing amateur radio stale in the 90's. I feel to test for CW is rediculous. We don't test for packet, rtty, amtor,g-tor, slow scan so why test for an outdated mode? By the way, I'm currently racking my brain with the code so I can upgrade to general. I would have upgraded a year ago if not for the code. I'd rather see the question pools increased. Seems this would be more benificial to amatuer radio than forcing people to do code.

>Nat Heatwole
>heatwole@clark.net

In my experiments with this antenna, I have found its acceptable SWR
bandwidth to bee approx 500-600 Khz.

This means that there is no way to get an acceptable SWR on both bands
at the same state of antenna tune. This means you will need to invest
in a second antenna or a tuner.

MFJ 1274 packet TNC with original box, docs, cables, set for Kenwood radios in like new condition. Also a really nifty, very high tech terminal. It's a Microterm 5520. It is composed of a flat screen monitor and a keyboard. It has a built-in cmos which you enter with a keystroke where you can change literally a couple of dozen perameters. Unless you want to download something (??), a computer is not necessary. This works just great and can be left on at all times (has built in screen saver). Both for $85. > affairs there is a fool or simply wants to be distructive.

I am neither, Carroll ... I've been a dues-paying member of the ARRL
since at least 1975, with only a brief lapse in membership while I
was out of the country and didn't get a renewal notice.

The ARRL has NEVER represented my interests or what I believe to be
the best course for ham radio. They have ALWAYS been "for" the status
quo and backwardness.

The only reason I have renewed my membership these past years is to
keep an eye on the SOBs and to quiet those who spout "if you 'aint a
member you have no right to complain about the league."

Their recent, self-serving pleas for more money "to help them protect
our frequencies" are a disgusting display of hypocrisy ... THEY are
the major threat to our very existence with their insistence on keeping
things stagnant and backward.

> There would be NO ham radio if the ARRL had not been there.

If you're talking about the return to the air after WWII, perhaps, but
there's been a lot of water under the bridge since then and, unfortunately,
most of it has been polluted in a big way by the cesspool that is Newington.

> The fact that a minority
> of hams are members speaks poorly for the majority of hams who don't
> know the very source of their own support and indeed existence.

I believe that the majority who choose not to join do so quite deliberately
and because they know the ARRL is their enemy, not their friend, when it
comes to policy matters. I would find it VERY interesting to know what the
"churn" rate in membership is and what the demographics of that churn are,
but I'm sure the ARRL would never publish such information ... it would
be FAR too embarrassing and point to the fact that they are NOT
"representative"
of the majority by any means.

Just as they now can't accept that modern digital techniques can easily
outperform OOK Morse ... just as they fight out of ignorance, fear, and
just plain stubbornness to keep modem modes from entering common use
in "their CW bands."

> The Transatlantic tests in December of 1921 finally showed once and for all

Do you people just not read, or get to a point in the sentence that you disagree with and stop there. Did I say anything in that above sentance about all of ham radio being CB without code? No. I specificly asked if anyone had listened to two meters lately. Damn, I wish people would think before they clicked the "reply" button.

I stopped listening to repeaters when I heard (obviously a married couple) continually use the repeater as there "private" radio channel. Now, I am not talking about dirty sex talk, but they got just a little too suyrpie on that channel for me.
I have been talking on simplex 146.52 for several years now. Rarely do I ever tune in a local repeater. Aside from the local lovebirds, it is very hard to get someone to talk on the local machines. It is like "if you are not a member of the club, we don't talk". Had a very interesting conversation with a gentleman this afternoon on 52 about TV UHF transmitters (I am a chief of a local U here in town). We estimated that we were about 40 miles apart. There are also two major intestates running through here, so folks looking for local info tend to call out on 52 since they don't know the local repeaters here.

rgds,
Scott

5851. Growth of Amateur Radio, latest statistics

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-23 00:00:00 UTC
From: billsohl@planet.net
Message-ID: <67nhke$pe8@jupiter.planet.net>
Source record: 183767
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Thanks to the W5YI report, here are the latest statistics
for amateur licenses in the USA as of 12/1/97.

Total licensed hams: 719,341
This total is only 1.1% increased over last year at
the same time. The net increase is only 7582
over December 1, 1996.

Of the total, here's the breakdown by license class.

Extra: 75,694 an increase of 2176 which represents
an increase of 2.9%. The percent of all hams that
are Extra is now 10.5%, up from 10.3%.

Advanced: 112,482 a decrease of 1922 which represents
a decrease of 1.7%. The percent of all hams that
are Advanced is now 15.6%, down from 16.1%.

General: 124,415 a decrease of 2299 which represents
a decrease of 1.8%. The percent of all hams that
are General is now 17.3%, down from 17.8%.

Tech Plus: 147,559 a decrease of 782 which represents
a decrease of 0.5%. The percent of all hams that
are Tech Plus is now 20.5%, down from 20.8%.

Tech: 179,226 an increase of 18,636 which represents
a increase of 10.4%. The percent of all hams that
are Techs is now 24.9%, up from 22.6%.

Novice: 79,965 a decrease of 7582 which represents
a decrease of 10.3%. The percent of all hams that
are Novice is now 11.1%, down from 12.4%.

Some thoughts:
With the sole exception of the Extra class, all other
license classes with HF access have decreased.
Indeed, it can be seen that the total of all
hams with HF access has DECREASED by 12,054
over the last year. In the same time, the Tech
license (nocode) has increased by 18,636. This has
caused an over 2% shift in coded vs non-code hams.
Indeed, today, 1 in every 4 hams is a nocode ham.

The percent of hams with 13wpm or 20 wpm code
qualifications (Extra+Advanced+General)

is down to 43.5% from 44.3%.

Ultimately, these are not growth numbers that
bode well for amateur radio in the USA.

Mr. Carroll, just how do you make such ridiculous claims?
Just who amongst us in the nocode-test group have suggested
anyone should have easy access to full HF privaleges?
If the only thing that ended was the code test, you'd still
have the Extra, Advanced and General tests as they are today.

> At the same time, in
>contradiction, they insist everyone upgrade their knowledge and
>electronic skills. You can't have it both ways.

Read very slowly for full comprehension....
If the only thing that ended was the code test, you'd still
have the Extra, Advanced and General tests as they are today.

> In ham radio, one "learns to earn" privileges. Nothing works better.
>Fifteen years of "same privileges" licenses brought on "Incentive
>Licensing". Thirty years later it is still working as designed.

Read again, very slowly for full comprehension....
If the only thing that ended was the code test, you'd still
have the Extra, Advanced and General tests as they are today.

THanks Lary for your note. I am totally blind and have been since birth. Yes, there are things I cannot do, but I have no trouble typing, running my ham rig, maintaining a packet bbs, using my laptop computer to control my ifr 1200, aligning my dss and c band satellite dishes--hope you get the point. I learned to type in the 7th grade back in 1961, and we do not need braille keyboards. Turn off your monitors, close your eyes--and let us see how well most of you do. Most of you could do the same if you had to and mad up your mind to. Thank the Lord you don't.

Yes, unfortunately, it is still working as designed. You have reached
the Brahmin class while Dr. Williamson, with a PhD in EE, is still a
lowly untouchable no-code tech. Doesn't it ever seem strange to you
to have such a Caste System in an otherwise free country where all
citizens are supposed to have equal access to publicly owned frequencies?

I was licensed as WN9ETW in 1962, and recall those Novice days fondly:

- Building and using a rock-bound Knight T-50 transmitter
(with the time-honored 6AG7/807/5U4GT line-up and a pi-net
tank circuit that would load anything)

- Adding an RME preselector to the front end of my NC-105 and
discovering there really were stations to work on 15 m

- The local 2 m AM net (used a "Benton Harbor lunchbox" for
that)

- The great support and encouragement from the local club,
not the least of which was an invite to participate in
Field Day (a BIG deal to a 14-year-old Novice!)

- The uncertainty of it all that made OPERATING the exciting
challenge it was.

I can still hear the CW calls of certain friends and DX stations in my
head if I listen hard enough.

Great memories and no regrets!

73,

Mark -- WA9ETW

Hello, and tnx for reading this request.
I would like to know what the agreed upon standard is for audio
pre-emphasis in a 2M FM xmitter. I suspect it is in the range of 100uS,
but have seen different values used. Also, is the RX de-emphasis just
the exact opposite? I am working on an old repeater rcvr that has 1000uS
of de-emphasis at its output???? If any of u wizards out there can
assist me, I thank you.

I doubt you could, George. How would the other fellow tune off enough
to get a beat note? OTOH MCW is a piece of cake. Just use Internet
Phone and a code practice oscillator.

5867. Re: Soon to be Ham thinks CW is interesting but...

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-24 00:00:00 UTC
From: rvpel@webtv.net
Message-ID: <67re3g$d42$1@newsd-162.iap.bryant.webtv.net>
Source record: 183583

About five years ago I entered Amateur Radio as a Novice operator. Shortly thereafter I attended a V.E. Exam Session so that I could operate on the local 2 Meter Repeater. The volunteer examiners at the session had difficulty processing my paperwork...they weren't sure how to submit it to ARRL because it was "very unusual" (as they put it) for someone to "upgrade" to Technician from Novice...usually learning the code and going to the HF bands is an "after thought!" Anyway, I entered the hobby as a Novice with the express purpose of working HF straight key CW...that's all I was really interested in...and to this day that's about all I do.

It is too bad that so many new hams will miss out on the thrill of DXing on CW...they won't give it a chance...they're so close minded about it (or lazy!!!) that they will miss out on the real thrill of Amateur Radio...low power CW worldwide contacts! When you really think about it, it is in a sense a miracle that our dits and dahs can leave that piece of wire in your yard, travel through the atmosphere, take a hop or two off the ionosphere, and land in some other person's ham shack on the other side of the globe...truly a miracle! It's exciting.

So, for the life of me, I don't understand what all the controversy is about. Let me do what I want to do and you do whatever it is you want to do! As for the testing...yes, I agree that the code tests should no longer be a "disqualifier"...I see no point in making someone learn the code if they never plan to use it. There will always be enough cw operators like me around to work on the air...the mode will never become extinct as some fear it will. However, there is still some regulation needed for the spectrum protection for cw operation.

As an Extra Class Operator I welcome all to HF...whether you know the code or not! HF is truly what Amateur Radio is all about...it's the only place you can still hear someone calling "CQ!" - That is, at least on CW ! The voice
mode frequencies seem to be monopolized by the many Nets & Scheduled QSO's...but that's a topic for another time.

I'd suggest laziness has nothing to do with it. The fact that it is a slow
tedious bore is the more likely reason. Even a two finger typist can
generate more throughput. You can always accomplish more by
working smarter rather than working harder than necessary. That
isn't laziness, it is just good sense.

>an offer of no-code access to HF make our VHF allocations more secure?

HF access is likely to attract people who currently aren't amateurs. But
at least some of them will then find the utility of the VHF+ frequencies they
are also allowed to use compelling enough for them to become active there
as well. And among those who are currently restricted to VHF+, I would
suggest that few would totally abandon VHF+ just because they could also
operate HF. So opening HF to the code test free is unlikely to reduce the
number of people using our VHF+ bands, but instead is likely to increase
that number.

Now the number of *hours* each amateur operates VHF+ may decline
a bit due to their HF activities, but that's not the metric of interest to
retain our VHF+ spectrum. The metric of interest is the nose count of
total amateurs. That's the political muscle the politicians understand.
The more amateurs we have in toto, the more political clout we have
for retaining *any* of our amateur bands.

And if the ARRL had any sense, they'd form a PAC to use that muscle.
If instead of 700,000 amateurs, only 22% of whom are ARRL members,
consider the political power of an organization with 7 million members,
each kicking in $30 a year. That's real money, and real power to influence
the politicians. But the ARRL has done everything it can to alienate
the potential amateurs who could give them that sort of clout. It hasn't
even effectively tapped the political power of the members it does have.
There's no wonder our bands are under threat. There is no effective
defense of them being mounted.

That's the theory, but unfortunately the gang in power defacto rules
by use of media spin and promises of bread and circuses to manufacture
a semblence of majority consensus to the policies the gang wishes to
impose while doing their best to undermine the freedom of the individual
from government intrusions into their lives and pocketbooks.

Instructive in that regard is a survey which was conducted where
members of the public were read a series of statements with which
they were asked to agree or disagree. That series of statements
was the Bill of Rights. Most people not only did not recognize that
it was the Bill of Rights, but a majority actually disagreed with them.

That's how far down the road we have gotten from the ideals of
Jefferson. People are ready to trade their freedom for the illusion
of security offered by intrusive Big Brother government.

I must agree.Mr. Powers, clearly you have not been on the CW bands, they are loaded with lots of operators young and old. You'll be dead in the ground before you get HF without code. There are too many op's who have bothered to learn the skill, they are not going to allow some butthead like you to give it away for them. Sorry OM.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^-------This is really, really dumb.... Does it inflate your ego each time you read it?

While it's true there is jamming that goes on in the CW portion as well, it's not EVEN CLOSE to the amount of jamming found on voice, from HF to VHF. Jammers usually need some sort of instant gratification, someone calling them a name or making a threat. CW just doesnt allow for the emotional responce so that's why the jammers tend not to do it there.

I just heard a radio commerical for IKEA (speciality home furnishings) here in Southern California. In the background of the commerical you can hear CW being sent but the code speed sounds like about 25 wpm, and it's just a little too fast for me. I sounds like real code, and I am wondering if anyone else out there has heard it, and if so, what is actually being transmitted.

Thanks.

This is the biggest crock of shit I have seen yet. While 'she' may indeed be who you say she is, it's highly unlikely. The person your describing, if she is a brilliant RF engineer, would more than likely be intelligent, articulate, and well spoken with the level of education she must have.

Our anon poster Amor Powers exibits NONE of these triats at all, as a matter of fact some of 'her' posts are closer to those posted by people like Burt Fisher and Jim O'Brien, just trolls nothing more,. Nice try on the 'sell' though, you were almost convincing....

I don't believe that survey at all. The majority of ham are techs now. Most of which won't upgrade. They should send surveys to EVERY HAM, even the ones not in the ARRL. THEN let's see the results.

Larr,

Go to Dejanews read some of Amor's technical postings if you have a clue about RF engineering you can evaluate Amor's bonafides for yourself. Posting a callsign on the internet is at best silly and certainly establishes no technical credentials. If you care about my current callsign look it up.

Tom,

IMO the result would have been different. I would not want my yearly dues going to pay for a survey to the other 530 thousand non-ARRL members. If you want your voice heard, write some letters to your Congressman, the FCC, or the ITU. If you want your voice to be part of an organized group--pay your dues and donate some time and energy. While I believe the ARRL is the most powerful voice in amateur radio today, you could join one of the other groups that you feel best represents your views.

I haven't seen the Ikea ad, and I'm not sure if it would even play here in Canada. But this is not the first time that CW has been used in commercials.

I think it was last year, I noticed some CW in some ad. Sadly, I can't remember what it was. I did think about posting something about it here. Then, a short while later, I saw another ad, for some completely different product and company, and it too had morse code in the background. Again, I can't remember what it was for.

I thought at the time that there must have been some factor that put the morse there. Maybe someone working in an ad agency is a ham. Maybe the agency handled both. Or maybe after one ad used it, another copied it. Or maybe somebody somebody somewhere thought it would "be cool" to put it in the ad. Knowing what was sent might provide an answer.

Radio shack does make a decent little 10 meter rig for a decent price. they were real cheap a couple yeard ago due to lack of interest in the band, but as the band opens up w/the sunspot cycle, they will be pretty hot items.

I would lke to see them resell some of the ramsey kits. That would get a lot of new techs interested in CW and in homebrewing I think. After all, a HF station based on those little kits need not cost more than abt 75 bucks... a pretty cheap "in" to an increasingly neglected aspect of the hobby. By the way, I still use a hacksaw blade key sometimes, though now I build em on a brass base instead of a pine board, and use relay contacts instead of panhead screws.

I agree that a full featured HF rig would be hard for RS to sell profitably. They would have to stick to QRP or kit resales... then again maybe the tentec scout would get a few takers... just wonder what kind of wholesale price TenTec would give RS. If I was them I would try the Ramsey kits. I have built some of these units and they are pretty simple for even an unsupervised beginner provided he is first shown how to solder and use a VOM. My only beef with Ramsey is they should include a brief chpter on antennas, operating, and propogation in a "Now that you finished building it..." topic. Otherwise a successful builder might still be disappointed. Shouldn't assume in this age of multiple choice memorize-the-question tests that the new licensee has the skills to set up and operate a QRP station, or that an Elmer is handy.

There isn't any reason whatsoever.

You'll also notice a large number of apparently "rabid 'pro-coders'"
popping up with no names or callsigns, just postings behind anonymous
handles. I suspect that members of the No-Code Agenda are taking to
posting these ridiculous messages in an attempt to "discredit" the
pro-code side.

> make a few things clear here...
> ... She is an active ham.... [etc]

Amor Powers responds:

I would rather have not seen that posted, but now that it has been posted, I have to say that I did not initiate it. I know who "AmorFriend" is, and have subsequently talked with her about the stark realities of usenet newsgroups. It's a harsh world out here, but I can take what it can dish.

My premise in newsgroups has always been that one stands or falls on the merits of what they post, not on the basis of titles or gender. It is not my way to discredit or personally attack individuals.

There are some out there who find a newsgroup forum to be a way to weasel in on the personal lives of others. This has happened before. I learned from that mistake.

I value lively discussion and airing of views which concern us, no matter how extreme. Newsgroups are one of the best and most interesting places to pursue that activity on a global scale.
Provocative framing of issues or technical material is in the spirit of a widely appealing thread. Some participants wish to dumb-down the discussion to a bland and totally agreeable and mundane level. That is their perogative which can be pursued in the threads they initiate.

It seems also, that there are a few subjects which I have pursued in 1997 which have also stricken the fancy of many others here.
Predictably, some are enraged by a fresh and savvy viewpoint. Certainly, my objective is not malicious, and I am not good a pleasing people. But if there can be a little spark of life and humor, or a quest for a better way to do something, you are likely to find me chasing it.

Ummm, in which country? Certainly not in the USA.

MD

>They should send surveys to EVERY HAM, even the ones not in the ARRL.
>THEN let's see the results.

Its impractical to send surveys to every ham. Instead, you have to take
a small, evenly distributed random sample. Based on the results of that
survey, you can deduce what the population as a whole will say, within
a margin of error.

The ARRL did just this. Even "non-coded" hams supported the code test,
by a margin of 51 to 46% (if memory serves me correctly.)

Amor responds:
Wow Todd, are you suggesting that ham hit squads and lynching posses be dropped in by helicopter and Zodiac to The Heartland of the USA, Canada, Central/South America, Asia, Western/Eastern Europe, Africa, or South Pacific Islands?

"TRANS-MISSION: IMPOSSIBLE"
That would make a great television show! Trouble is, it would be difficult for the average viewer to tell who the "bad guys" are. A feature-length movie on this theme would certainly become a box office smash and would later retain a dedicated audience of cult followers on video.

Todd sezz:
> if not, lets just let them HAVE HAM RADIO.

Amor responds:
FB ops have already taken the pieces they desired, and will continue to do so without permission.

The alternative is for amateurs to simply use those bands...
"On a shared basis" of course. :-)

But with a dwindling HF ham population, unlikely. FB Radio ops are numerous and growing at a fast rate now. My guestimate is that the number of FB ops worldwide is expanding each year more than the total number of all hams currently active on HF in the USA. It is doubtful ham radio ops will catch up during this sunspot cycle, especially with the intentionally inhibitive factors now present. Amateur Radio has sealed its fate.

>> I think the ARRL, like most organizations, listens to its members.

>No it doesn't. It turned a deaf ear to me when I was a member.

>Let that soak in for a few minutes.

Well, it soaked in, and I think your all wet! Obviously not every member gets to see the organization take up the cudgels in support of a pet idea/cause/viewpoint. But I have found our director to be most receptive to input: hearing from members takes him off the uncomfortable spot of acting without the opinions of his division. When I button-holed him at a hamfest to make my position known in regards to the Morse requirement, he said I was the first to have broached the topic to him. After our talk I circulated the 'fest finding my friends and guiding them by the arm to go over and reinforce my comments. Since he had pointed out my white hair and made some comment about cw and oldsters, I made a particular effort to find my teenaged cw cronies.

Perhaps its unfortunate, but democracy works best for the lobbiest!

And your not all wet, I just couldn't stop myself from punning on your "soak in" theme!

I'm not against CW at all, Larry. I experience great passion and enjoyment for it in my own operation, but that is my own choice to use it.

But I have seen so many wonderful people completely turned off to ham radio because of our past sin of making it a forced prerequisite to participation or full access. I'm frankly ashamed of myself and my peers for allowing the present state of the licensing requirement to continue.

I am not the only one who feels this way. Several other very prominent hams who have taught code and theory to many more people than I, have come out with a similar viewpoint recently.

happy holidays all,
my vectronics vc-300d tuner arced this morning while i had it switched direct to my antenna (not through the tuner section) and now i can only get about 70 watts out of my 430. i usually get 110-120w. the antenna i was using is a trap dipole but my highest swr on 40m is 1.5:1. with the carrier gain set to 12 oclock i should get 100w, but i am only getting 7-10w. if i turn it all the way up i get about 70w. it doesn't sound like the transistor problem i have read about. any suggestions? is there a place i can send the radio that will service it fast (i go back to school on 1/13)? btw, the tuner arced while i was calling cq on 7.245. please post replies or send them to zootv@erols.com thanks
mike

Im still considering the code-no code issue, but I would like to see the requirement for road tests and eye tests removed from driving license applicants. I also would like to see mail ordering of firearms legal, like it was in the 1960's. I also think that all types of drugs should be available over the counter, and tax free. In fact, the hell with all taxes, I would like to see them go away. How does everyone else feel about these issues?

I don't believe that the holidays are the only time for peace,
but they give us a chance - and excuse - to reflect.

Ham radio only dies if you let it.

The only thing that will save it is solidarity.

Factious behavior will certainly lead to the end, yet
most of the people here do nothing but rend the very
fabric that IS ham radio.

Killing a messenger does nothing but leave a corpse.

I recently took a business trip covering 1,700 miles.
I volunteered to drive - lots of time to operate from
the car. During this trip, I made about 50 QSOs,
on 20, 30, 40, and 2 meters. Not a single cross word
spoken, but lots of good discussion (yes, even via CW).

I met a LOT of good people and had a lot of thought-
provoking experiences.

I ran into a friend from back home when I was 400 miles
away from home. I asked him (via CW) to call my dad
and tell him that, even though I was ill, I was
feeling well enough to make the trip (needless to say,
dad was ecstatic to hear it).

I copied the beep beep of Sputnik 40 (RS-17) from
four different states by merely leaving my 2m mobile
rig's 2nd receiver on 145.82 MHz.

I spoke to people all over the easternmade about 50 QSOs,
on 20, 30, 40, and 2 meters. Not a single cross word
spoken, but lots of good discussion (yes, even via CW).

I met a LOT of good people and had a lot of thought-
provoking experiences. Few contacts lasted less than
20 minutes. Some lasted as much as 40 minutes, and
at 35 wpm, you can say a lot in that time period.

When I got to Chicago, I made a call on a local repeater
and spoke immediately to three area hams, who immediately
made me feel very at home in a city I'd never before
visited.

I got the chance to operate the station at the University
of Chicago on a very cold evening. We'd run into them
during contests a number of times from the U of Maryland.

(now I understand why we could never beat 'em!)

True, many people told me that at 28, I was the youngest
high-speed CW op they'd run into in a long time.

BUT how many does it take to start a trend?

One with the nerve to speak.
Several with the nerve to listen.

As I made my way back to Maryland, I stayed over with
ham friends outside of Cleveland. I went to their
club dinner. Four of the 30 people in attendance were
under the age of 18, which was good to see. But there
was talk of factios behavior, even within this club.

Friends (and you are mine, no matter what you may think)
there is NO ROOM for factiousness.

It's time to ask ourselves what WE can each do.

Are you active? Even 10 minutes a day is more than nothing.

Do you tell anyone about it?

Do you understand EVERYTHING there is to know?

If you ARE active, and you make a contact - or even
hear a station with a prefix you don't recognize -
or just talk to someone in some tiny town in the
middle of nowhere, do you look on a map for it?

When you get a radio, do you first open it up -
even before turning it on - to see how it's wired?
To see how it ticks?

None of us is so intelligent as to know everything
there is to know, although some people feel that
by some implied grace, they do.

You don't. Nobody does. I certainly don't, nor
do I profess to. But I DO think I'm onto something.

When you teach, you yourself learn.

Go forth and show others so that you may yourself
improve and continue to learn.

Tearing down so as to rebuild only works in the
military, which this is not. It's ham radio.
It has been since the beginning, and will continue
to be, in whatever form each of us sees it.

But if we don't use it, we lose it.

If we don't teach it, we lose it.

If we act against each other, we lose it.

Ham radio has directed my education & career.
I've learned skills I never would have otherwise.
I've met people I would not have.
I've learned far more about the world than I would have.

I would hate to see someone who wanted the same
chances not even have them available.

You people are giving in too easy. Hold out for some cash. Make them pay you to take one. I for one, will not take one of these free radios unless I'm paid $50 to take it.

The assertion above is correct. I was *personally* told by the then Chief
of the (then) Private Radio Bureau at the FCC (1 level down from the
Commissioners) that 220 was lost because hams refused to modernize and
the ARRL refused to give up the "code forever" battle.

I had my novice license in 1972-73, when I was in High School.
I had an Elmac transmitter and a National NC 190 receiver. The reciever I still have, the transmitter, which my Uncle W8ZNG had given to me, I gave away years ago. I could kick my self!

My call was WN9LFZ. One night I was calling CQ, I think it was on 40 mtrs. We were just recently allowed to use a VFO. Someone came back to me with something like "out of band OM". I was dumb enough to thank him, and send 73 with my call sign. About two weeks later I got a pink slip from The FCC! They had heard me at a monitoring station somewhere out east. The part of my transmision that they quoted to me,was my reply to the person that told me I was out of band.

I had to write a letter of explanation, and tell them what steps I would take to make sure this did not happen again. I sent my letter off, and never heard anything else.

W9FL

I've heard that the people who are into music [be able to play musical
instruments etc.] learn CW much quicker. I did receiving
practise in one day [meaning I sacrificed a whole day...] and I passed
5 WPM instantly on the same day. As long as for transmitting, I
didn't practise but I occasionally transmitted my call signs etc. on
DX freqs. (we have both receiving and transmitting test in Canada)

---

yes, I play the music. I play tons of instruments... maybe that's
why I could do in a day...

---

good luck. it may take a week, but 5 WPM isn't so difficult.
I suggest you to practise with a speed of not less than 8-9 WPM and
take a real exam at 5 WPM. That's what I did. Practising in a
faster speed will help. Practising at 5 WPM will make the people
stuck at the exam -- kinda self-confidence I guess ??

Bill,

The problem is that the vast majority people have not joined the ARRL. If anyone wants a voice in the ARRL, they should be a member. If all these folks belonged to the League, they could get the people they want elected into the positions that can make changes. Amateur Radio would have a much larger voice if all 700+ thousand amateurs belonged to the ARRL. With that many dues-paying members, maybe the annual membership fee could be reduced as well! All this talk about starting other organizations to fight the ARRL reduces our creditability as a whole. What war claimed the most number of American lives? The civil war--both sides were American. Seems like we have a similar situation with the code versus no-code debate. While I'm personally pro-code and pro-testing, I live in a democratic society where the majority rules. The problem here is that almost 75 percent of the amateurs do not cast a vote and they complain about how the election turned out.

Happy Holidays and 73 de Tom

It's not that learning cw is that hard. It takes about one evening to learn the characters. Receiving it takes more time, depending on the individuals, it may take between one day and 20 years to be able to read 5 wpm. When you have a visceral hate of cw, it can take very long. In my case, it took 20 years to get used to the idea of learning it and 2 months to get to 5 wpm. The next step, which is 12 wpm will probably take 10 years. Let's see now, since I retire in about 9 years, I just might be able to gain full access to hf at the same time. At least my old age will be filled with interesting ssb contacts and I will never have to hear beeping again. Removing the stress of cw will probably add years to my lifespan. I sincerely hope that cw will have become history by then and that Carl and Larry will have become friends. Merry Xmass everyone.

asked Cecil,W6RCA

Well, no. They listen to the majority , who support maintaining the code requirement. And this group includes, from reading *in this very ng* a fair number of non-code qualified hams who none-the-less support maintaining the requirement. These selfless individuals support maintaining the requirement because they see the benefit the requirement affords, even if the maintaince is against their own personal gratification.

Well, many don't. Here I hear an increasing number of the "holla" corps at 10MHz, on A.M., competing with WWV.

I like to hope that this interference will induce the FCC to ask the State Department to file a complaint with "our cousins to the South."

Hi.

I would like to know if a vertical antenna for 80m will do a good job.

thanks.

>as well!

Actually, the dues are reasonable as I see it.
We spend more for a good dinner with our spouses
at a restaurant than we do for one years ARRL membership.

> All this talk about starting other organizations to fight the
>ARRL reduces our creditability as a whole.

I agree to a point. That point being the ARRL's
position on code testing. For that reason I am one
of the first to join Nocode Intervational... not to
fight the ARRL on all fronts, but ONLY to be a
part of an organization with that specific goal (elimination
of code testing).

>What war claimed the most number
>of American lives? The civil war--both sides were American. Seems like we
>have a similar situation with the code versus no-code debate. While I'm
>personally pro-code and pro-testing, I live in a democratic society where
>the majority rules.

Define the majority. That's the problem. You are
probably only looking at the majority of ARRL members and that
is not a majority of all hams, and it cerainly doesn't include
non-hams. Remember, FCC rules are not the sole domain
of those already licensed.

> The problem here is that almost 75 percent of the
>amateurs do not cast a vote and they complain about how the election turned
>out.

There was NO vote, only a survey. Not the same
at all.

Want to trade Drake R-7 for NRD-515 + NDH-518.

Drake R-7 Receiver in excellent condx. Includes NB, AM, SSB and CW Filters
and copy of service manual for JRC NRD-515 and NDH-518 Memory Unit, both in
excellent condx.

Thanks,

Ben Wallace

Bill,

My definition of the majority in this response was the 75 percent of licensed amateurs that do not belong to the ARRL. My point is, and remains, that this large group has decided not to try and make the changes needed from within. I've said this before--any organization that wants to remain has to support the views of the majority of its members. I received some email one day from a gentleman who wondered why I was not urging the ARRL to change it position so he could become a member. I'm pro-code and pro-testing--the burden to make the changes do not rest on my shoulders. Although I did drop a note off to my section manager about the possible implementation of the sending test and return to solid copy. As a VE, I'm convinced that the sending test will be very subjective and difficult to score--this will open up the VE's for some type of crazy lawsuit. While I do not like the multiple choice tests, I do like the fill in the blank variety. When I passed my 20, my page had very little writing on it. I had the callsigns, names QTHs. etc--never did write down the "My name is" or "I live near". IMO, the idea of the test is to ensure that a meaning message can be received--not that every word can be written down. But if the rules were to change, I'm not going to quit the ARRL or sell my equipment and get out--I'm having too much fun. CW will not die as long as I'm able to copy and send it.

While I agree with you that the FCC rules are not our sole domain most people (ever try and tell someone about amateur radio? We have got to be more proactive in selling our service to the public) have no idea what our service is or is not. I don't try and involve myself with the American Medical Association or American Bar Association (insert many other organizations) because I'm not aware of their issues. If I decided to, I'm not sure I would be taken seriously as an "outsider."

I don't have a problem with No-Code International or FISTS--many voices becoming one is how our political system works. It seems to me that the real strength is with the ARRL--why not be members the ARRL and some other Organization that will lobby the ARRL for changes?

I respectfully submit that we are at a point where we need to be unified. If we're not careful are spectrum will be sold off to the highest bidder while we quarrel among ourselves--the argument will then become academic.

73 de Tom

5926. Re: 80m HF w/ vertical antenna

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-24 00:00:00 UTC
From: tsum3drac@aol.com
Message-ID: <19971224071301.CAA13327@ladder01.news.aol.com>
Source record: 183691

>I would like to know if a vertical antenna for 80m will do a good >job.

This is a vague question. The vague answer is that a good vertical will do a good job; a poor vertical will do a poor job. Useful answer, huh?

Are you proposing a full 1/4 wave vertical ? Will it have a good counterpoise? Do you have the space to mount one substantially clear of trees and buildings? If so, then it can be expected to do a fine job. You can expect it to cover about a 200KHz segment of the band with a good match. It will have good low angle radiation but poor high angle radiation.

If you are proposing a shortened and loaded vertical, it is possible to get good performance but you should be aware of a few limitations.
First, the bandwidth will be seriously reduced. I used an 18' vertical on 80M once which only covered about 50KHz (measured by 2:1 VSWR points, if I recall correctly). A shorter vertical will have even lower bandwidth.
Secondly, the radiation resistance drops very fast an an antenna is shortened. This means that minimising other resistances (principaly ground resistance) become exceedingly important to maintain reasonable efficency. I saw a write-up in QST years ago on an 8' vertical for 80M. The author stated that it required over 100 radials in the counterpoise.
Also, the low radiation resistance necessitates an impedance transformer if you choose to match it to 50 ohm transmission line.
A shortened antenna also has lower gain, and tends to radiate power at both low and high angles. This can be a good thing or a bad thing, depending on where you would like your power to go.
Also be aware of a pitfall that very many hams fall into. If you set up a shortened vertical with an inadequite counterpoise, ground resistance will be high. This will have the affect of improving your VSWR reading over a wider segment of the band. Don't remove radials to improve VSWR and bandwidth. All you would be doing is dissipating a larger portion of your power in the ground resistance. This is a bad thing which appears good on the VSWR meter.

Good luck with your vertical.

Blake - WB4PLL

The actual figures may be quite different, probably a lot less hams than are on the roles. With ten year licensing it takes that long to find out who died or quit.

IC-746 also in stock with Waters & Stanton at a very good price!!

Brief details on our web site www.waters-and-stanton.co.uk. Quote this news notice and get a free base station microphone thrown into the deal!! Many other bargains at our usual Christmas amateur radio sale.

We are located 25 minutes from M-25 junction 29.
Our store is open Wednesday 24th and Staurday 27th December. Also open 29th - 31st December. Closed 1st January but back to normal 2nd January.

Get right down now and grab yourself an IC-746.

[Sigh...]

Views expressed in this news bulletin are not necessarily

those of the Broadcast Officer, the Relay Officers, or of the

Society.

A.N.A.R.T.S. News Bulletin 990 21ST DECEMBER 1997

COLS COLUMN

WITH THIS, OUR LAST BROADCAST FOR 1997, WE AT ANARTS WOULD LIKE TO

WISH EVERY STATION THAT HAS SUPPORTED US THROUGHOUT THE YEAR A VERY

MERRY CHRISTMAS AND A PROSPEROUS NEW YEAR. WE REALLY APPRECIATE YOU

TAKING THE CAST WHENEVER YOU CAN AND CERTAIN STATIONS HARDLY EVER

MISS AND TO THOSE I THANK YOU VERY MUCH.

TO SAY WE ARE NOW FEELING THE EFFECTS OF A DECLINING MEMBERSHIP

WOULD BE AN UNDERSTATEMENT. IT WOULD BE NICE IF STATIONS TAKING THE

CAST WOULD BECOME MEMBERS AND SHOW A LITTLE SUPPORT. IT ONLY COSTS

TEN DOLLARS. WE ARE ALSO RUNNING ON A SHOESTRING AS REGARDS THE

NUMBER OF PEOPLE ACTIVELY ENGAGED IN EITHER RUNNING THE SOCIETY OR

RELAYING THE CAST. WE SHALL HOWEVER CARRY ON AS BEST WE CAN AND IF

THINGS GET ANY MORE DESPERATE THEN WE SHALL HAVE TO CONSIDER

CUTTING OUT ONE OF THE BROADCASTS EACH WEEK. FINANCIALLY WE SHOULD

BE ABLE TO CARRY ON FOR 3 OR 4 MORE YEARS. OUR BIGGEST COST IS THE

RUNNING OF THE ANARTS WW RTTY CONTEST.

HOWEVER HAVING SAID THAT, LETS LOOK AT BRIGHTER THINGS. AS YOU KNOW

THIS YEARS CONTEST WAS A HUGE SUCCESS, WITH US RECEIVING MORE LOGS

THAN EVER BEFORE. PROPAGATION CONDITIONS WERE FAIRLY GOOD FOR

CONTESTING, A FEW MORE VK STATIONS WOULD HAVE BEEN VERY NICE. I

WOULD LIKE TO THANK OUR CONTEST MANAGER JIM VK2BQS FOR THE VERY FINE JOB HE DID IN PROMPTLY COLLATING AND CHECKING THE LOGS AND FOR POSTING THE CERTIFICATES AWAY. IT IS NOT AN EASY TASK, I KNOW AS I HAVE TO SIGN ALL THE CERTIFICATES AS WELL AS JIM.

IT LOOKS AS THOUGH PROPAGATION CONDITIONS ARE IMPROVING NOW ESPECIALLY ON 40 METRES. EARLIER THIS YEAR IT WAS JUST ABOUT IMPOSSIBLE TO GET A CALLBACK FROM THE NSW CENTRAL COAST OR HUNTER VALLEY AREAS. THIS HAS IMPROVED DRAMATICALLY AND I REGULARLY HAVE VK2BQS AND VK2BAT CALL IN FROM THE PORT STEPHENS AREA. SO HERE'S HOPING FOR BIG THINGS IN 1998 AS FAR AS PROPAGATION GOES AND WHO KNOWS WE MAY HAVE OUR OLD FOLLOWING BACK BEFORE LONG.

DURING THE YEAR OUR BROADCAST OFFICER PAT VK2JPA BECAME A MEMBER OF THE NSW WIA COUNCIL, CONGRATULATIONS FOR THAT PAT AND THANKS A LOT FOR ALL THE HARD WORK YOU HAVE DONE THIS YEAR IN COMPILING THE NEWS BROADCAST EACH WEEK. A JOB WELL DONE.

ALSO I WOULD LIKE TO THANK ALAN FALL OUR TREASURER FOR HIS EFFORT THIS YEAR AND ALSO KEITH VK2ZZO AND THE GLADESVILLE AMATEUR RADIO CLUB FOR LETTING US MEET AT THEIR PLACE. THANKS ALSO KEITH FOR PUTTING OUR CAST ONTO YOUR TV BROADCAST EACH WEEK. GLADESVILLE ARC IS A REAL FRIENDLY GROUP, SO THANKS AGAIN WITH A MENTION OF TIM VK2ZTM AND MATTHEW VK2YAP.

WELL THATS IT FOR THIS YEAR, LOOK FORWARD TO HEARING YOU ALL ON AIR IN 1998, FOR NOW 73S, TAKE CARE ON THE ROADS, AND IF YOU DRINK, PLEASE DON'T DRIVE. COLIN DAVIES VK2CTD, PRESIDENT ANARTS.

ANARTS BROADCAST DATES

THE ANARTS BROADCAST WILL CONCLUDE FOR 1997 ON 21 DECEMBER AND RESUME ON 18TH JANUARY 1998.

ALL HERE AT ANARTS HOPE YOU HAVE A VERY MERRY CHRISTMAS AND A HAPPY NEW YEAR.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(12 DECEMBER - 18 DECEMBER)

ISSUED ON 19 DECEMBER 1997

SUMMARY

Date 12 13 14 15 16 17 18

10cm 93 89 90 89 85 86 86

A 2 1 3 2 4 4 (7 EXPECTED)

T 37 37 62 54 55 44 40

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

GEOMAGNETIC ACTIVITY RECORDED AT LEARMONTH W.A. WAS QUIET 12TH TO

14TH, AND 17TH TO 18TH; AND QUIET TO UNSETTLED 15TH AND 16TH.

MAXIMUM USABLE FREQUENCIES WERE NEAR PREDICTED MINTHLY VALUES, WITH

SHORT WAVE FADEOUTS EXPERIENCED DURING NIGHT HOURS, MAINLY IN

SOUTHERN AUSTRALIA AND NEW ZEALAND, FROM 13TH TO 16TH DECEMBER.

FORECAST

(19 DECEMBER - 25 DECEMBER)

SOLAR: LOW UNTIL 21ST DECEMBER, AFTER WHICH SOLAR ACTIVITY

MAY INCREASE DUE TO THE EXPECTED RETURN OF A

PREVIOUSLY FLARING SOLAR REGION.

GEOMAGNETIC: INITIALLY QUIET, BECOMING UNSETTLED WITH ACTIVE

PERIODS DURING 21ST TO 24TH DUE TO SOLAR CORONAL

HOLE.

FREQUENCIES: MOSTLY NEAR PREDICTED MONTHLY VALUES. HOWEVER MID TO

HIGH LATITUDES MAY EXPERIENCE PERIODS OF DEPRESSION

AFTER LOCAL DAWN DURING INTERVAL 21ST TO 24TH

DECEMBER.

ARLD052 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, 425DXnews, The 599Rpt, The Daily DX and Contest Corral from QST. Thanks to all.

GAMBIA, C5. Lee, G0ULN, plans to be in Gambia from Dec 19 to Jan 9. He may be QRV as C56/G0ULN but hopes to sign C56LE. Look for him on either 20 or 15 meters daily. QSL to home call.

ANGOLA, D2. D2AI is QRV on 20 meters using RTTY around 1720z to 1930z. QSL via CT1EGH. Look for D3SAA to be active as well although his length of stay is unknown.QSL this station via CT1BZJ.

AMSTERDAM AND ST. PAUL ISLANDS, FT8Z. Eric, FT5ZG, has been QRV on 20 meters around 14278 kHz between 1500z and 1630z. QSL via F5RQQ.

JAN MAYEN, JX. Terje, JX3EX, is QRV until next Mar or Apr 1998. He will be active on 80 to 10 meters. QSL to home call.

AMERICAN SAMOA, KH8. KS6DV has a new call and is QRV as AH8LG. QSL

The Ohio/Penn Dx PacketCluster

DX Bulletin No. 335

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH and The 59(9) DXReport, KF2O, W3UR and The Daily DX, W4WX/KG4GC, W5SJ, AC6LF, K7AR, N8AC, W8GMH, WB8LFO, K9FD, DL2FAG, JA1OGX, ON4CEL, VK3AKK, VK6APK and QST for the following DX information.

BY1, CHINA. Merv, K9FD, and Harold, W0RI, are planning a trip back to BT1QH, and it looks like it will begin on Jan 14th and last until Jan 26th. Their goal is primarily a low band operation concentrating on 160 and 80 meters.

JX, JAN MAYEN. Terje, JX3EX, will be active until next Mar (or possibly until April). Activity will be on 80-10 meters. This station sometimes shows up on the 14226 DX Net around 1730z. QSLs can be sent to: Terje Berg, 8099, Jan Mayen.

SPECIAL EVENT AND PREFIX. Beginning Jan 1, 1998, the Geelong Amateur Radio Club in Victoria, Australia, will be celebrating their 50th year of existence. They understand that this may be the only club in VK-land that has been active this long. During the

whole year of 1998, they will be using the callsign VI50G (Victor India Fifty Golf). They will be active on all bands as well as in major contests. There will be a special QSL available for this event. QSL via VK3ATL, P O Box 520, Geelong Victoria, 3213 Australia or via the Bureau.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by paows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

Email address for the Broadcast Officer is :

patl(at)conmusic.usyd.edu.au or patl(at)mail.usyd.edu.au

In article <19971222235601.SAA26481@ladder02.news.aol.com>
cbrambo@aol.com "CBRambo" writes:

> Fact: 40% of the amateur 220Mhz band was taken away in 1989 and reallocated to
> commercial use. The ARRL was DIRECTLY responsible for this by stubbornly
> refusing to endorse ANY sort of code-free license as the FCC had requested.
> The old, white men in Newington wouldn't even consider the Communicator class,
> which was to be FAR more restrictive than what eventually became the no-code
> Technician license. Result: loss of frequencies. Are you going to allow your
> so-called "voice of amateur radio" to repeat the same mistake in 1998?

Dropping code testing for HF access may have a number of valid
justifications, but I don't see defense of the VHF/UHF spectrum as
being one of them. On the contrary, I believe that it would damage
VHF/UHF activity and spectrum retention.

Dropping code testing will attract new amateurs who are not attracted
by the present offer of no-code VHF and UHF access, so I assume that
these new amateurs would operate solely or mainly on HF. And dropping
the test would also allow existing Techs to move some or all of their
present activity from VHF to HF.

All the bands now under threat, including the 220MHz band that was
reduced, are fully available to no-code licensed amateurs. Why would
an offer of no-code access to HF make our VHF allocations more secure?

Regards,
--

5932. Re: Amor Powers: Is this jerk a ham?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-24 00:00:00 UTC
From: amorfriend@aol.com
Message-ID: <19971224121001.HAA23922@ladder01.news.aol.com>
Source record: 183697

To Whom It May Concern:

Look, let's talk plain here. I have never posted to this group and I am NOT a ham operator or a CBer....I am by training a physicist. I enjoy reading this news group to see what is being posted, usually by Amor. And I am kind of amazed at what has been happening recently, what with the personal attacks and such.

So I wanted to set the record straight, as much as I can.

I am a good personal friend of Amor Powers and I want to make a few things clear here:

1) I have personally known Amor for over 9 years now. She is one of the most brilliant RF engineers I know and she HAS an extra class license and a commercial radio telephone license. In fact, she has been licensed for over 25 years.

She is an active ham with a literal room full of equipment, including the regular ham equipment as well as Spectrum and Network Analyzers, broadband Service Monitors, and many weird antennae and towers (more equipment than I have in my physics laboratory!)

2) She has worked in the radio business, setting up commercial stations all around the country, since the early 70's. I have personally seen some of the commercial stations that she has designed and built years ago, most of which are still on the air. She has also worked in the electronics industry, designing and developing RF-based products. She holds quite a few patents in the radio/RF area, having received her last patent in 1996.

3) Regarding her code ability, I have personally seen her transmit code, at what appeared to me to be a phenomenal speed (I do NOT know Morse Code so I just felt it was very fast). She has a transceiver built into her car (with a huge rear mounted antenna that continually hits drive-through buildings) and a double clear plastic keyer on the center console, so she can "talk" while driving (scares the daylights out of me when I am with her but, so far, no accidents).

And, for those interested, I am one of those non-hams who can't learn code for my life (see the discussion on no code licenses....that's me, I admit it).

4) If you've read any of her technical postings on here, it is obvious that she knows her stuff, well beyond most engineers I know. When I have a technical question in the RF area, I always go to Amor (rather than to my more academic physics peers) and she always amazes me with her knowledge and insight.

5) Obviously, "Amor Powers" is NOT her real name and she does NOT list her real email address. This is for obvious reasons since I suspect she might get a bit of *UGLY* email from a few posters on here. "Amor" uses a psuedonym because she is well known in the radio business and wants to protect her privacy. I can totally understand that.

6) Amor has written quite a bit about amateur and CB issues, and has been editor of a few publications, although she is in the technical arena right now.

7) Giving out her call sign on this news group is just like giving out her real name and address. She chooses her privacy and wishes to maintain it, for good reason.

Sorry for this long post but I had a lot to say. I just wanted to set the record straight. Thank you.

5933. Re: AMOR POWERS NOT A HAM...does it matter?

Hello again,
I was wondering if you were still
(by chance) interested in learning
how to earn a handsome and respectable
income using your PC and Online connection.

It's really quite simple.

I'm making a "killing" and it really
would be GREAT to see you join me
in this online adventure!

If you'd like more info, just
type "MORE INFO" in the subject
line when you reply. I'll answer
to your request personally ASAP.

Don't you want a future
in online commerce? It's the
future of the world economy ->

WITHOUT A DOUBT!!! So.........

DON'T be left behind! Take
advantage of our teamwork and
get an edge in securing your
financial future!

"There *ARE* secrets to online success!"

Let me show you how it's done!

Best Wishes,
Andrew

P.S. - Just watch the news. You can
see how more and more people are making
it BIG online! Our Company is at the
forefront of this new revolution!

"By seeing you will believe."

The secrets you learn from our team
will help you in any online business.

"Don't waste your time defining that
which is already clearly defined."

Dear RealPlayer User,

Since you downloaded our free RealPlayer
a while back, you've probably seen and heard
some pretty amazing things on the Web.

Now you can experience even more with
the new RealPlayer Plus 5.0, the enhanced
version of RealPlayer.

RealPlayer Plus 5.0 delivers benefits that
will blow you away including:

- The best quality RealAudio and RealVideo at 28.8
- One-button scanning for LIVE audio and video sites
- Instant access to content with programmable preset buttons
- Streaming cartoon-style animations with audio
- Ability to record selected clips
- Packaged CD-ROM and manual
- Free telephone technical support
- Just $29.99 with 30-day money back guarantee

And for a limited time, if you order and
download RealPlayer Plus, you'll get a FREE
music CD from Sony Music (continental U.S. only).

Please visit our Web site to order and
download the final version of RealPlayer
Plus 5.0:

http://www.real.com/plus/index.html

Thank you for using RealNetworks products,

Maria Cantwell
Senior Vice President
RealNetworks, Inc.
Seattle, WA USA

****** INSIDE THE PENTHOUSE STRONGBOX ******

NOW SEE IT ALL FOR FREE!!!!!
Get your FREE 3-DAY PASS at
http://www.penthouse.com/amazing

For years, rumors of its existence circulated around the Penthouse
offices. It was whispered that Bob Guccione had a secret Strongbox
where he kept images from past photo shoots that he had deemed too
explicit for publication. Now, for the first time, the truth can be
revealed in all its sizzling, sensuous splendor. Yes, there is a
Strongbox. And, yes, the photos contained within its steel confines
push the boundaries of erotica to never-before-imagined realms.
Best of all, Bob Guccione has decided to open the Strongbox and share
these never-before-seen pictures with the world. In fact he has
personally selected a series of the once secret images to appear in
the Private Collection over the coming months. The pix that originally
appeared were hot, but what you'll see here is beyond belief.
Now available to members of the Penthouse Private Collection....
http://www2.penthouse.com/private/collect/strongbox/index.html

If you're not a member yet...
get your FREE 3-DAY PASS now, and SEE IT ALL!
For your free pass, go to http://www.penthouse.com/amazing

ADULTS OVER 18 ONLY PLEASE!

Don't Know about you guy's!! don't know if your making fun of him are not sounds like you are to me.i'm not blind but have a very good friend that is,his name is Brian,he just past his 13wpm code 12/19/97 with a 104 key board on a computer,without any sound mech.to decipher it, he passed his 5 wpm test on a brile machine.if you think you could type on one ,i'll be there to lagh at you 3 or4 key strokes just to make (1) alhabet Ha! no markings on keys and does'nt even have but 8-9 keys on whole thing.
As a matter of fact he could probly out type most anybody on your 101 key board,with his
101 on his,
He has his own computer at home and is capable of reading messages with his sound card,also his key board is no more special than YOURS,it's the same.I'm proud that he took his 13 wpm instead of a wavier.also more talented ways you or i could never be does'nt even need a WHITE cane to get around.His eyes were removed when he was (one) year old.He is married to his wife also a (Ham) and she or their two childeren are not Blind,Is he Hadi-capped, Maybe?
Just because your amazied and are in disbelf that a blind person can type on computers,and the other which thinks a brail machine is hooked to a computer.Get Life.

Hi Larry,
just wondering if you had a change of mind or what? as I havent heard any=
thing
from you on the IC-2350. I sent all my info and was not in anyway offende=
d in
your asking of the info. but since then have not heard from you.
if you want the rig or dont want the rig please let me know. all my info =
is
current
on the newest of the callsign data base programs as well as the internet =
and so
on.
well if you would let me know oneway or the other. Thanks 73 DE / KB=D8=
TWU...

THanks Lary for your note. I am totally blind and have been since birth. Yes, there are things I cannot do, but I have no trouble typing, running my ham rig, maintaining a packet bbs, using my laptop computer to control my ifr 1200, aligning my dss and c band satellite dishes--hope you get the point. I learned to type in the 7th grade back in 1961, and we do not need braille keyboards. Turn off your monitors, close your eyes--and let us see how well most of you do. Most of you could do the same if you had to and mad up your mind to. Thank the Lord you don't.

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great shape almost like new. Email: n2rif@amsat.org You can try calling but my phone is usually busy cause Im on the net most of the time. My ph# is 609-386-9382..
New it cost over $430 for everything. I am asking $290 OBO. It is assembled. The shipping will probably be a bit too expensive!! So anyone who is within driving distance should probably re: My qth is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

|
|I am a good personal friend of Amor Powers and I want to make a few things
|clear here:
|
|1) I have personally known Amor for over 9 years now. She is one of the most
|brilliant RF engineers I know and she HAS an extra class license and a
|commercial radio telephone license. In fact, she has been licensed for over 25
|years.
|
|She is an active ham with a literal room full of equipment, including the
|regular ham equipment as well as Spectrum and Network Analyzers, broadband
|Service Monitors, and many weird antennae and towers (more equipment than I
|have in my physics laboratory!)
|
|2) She has worked in the radio business, setting up commercial stations all
|around the country, since the early 70's. I have personally seen some of the
|commercial stations that she has designed and built years ago, most of which
|are still on the air. She has also worked in the electronics industry,
|designing and developing RF-based products. She holds quite a few patents in
|the radio/RF area, having received her last patent in 1996.
|
|3) Regarding her code ability, I have personally seen her transmit code, at

|what appeared to me to be a phenomenal speed (I do NOT know Morse Code so I
|just felt it was very fast). She has a transceiver built into her car (with
a
|huge rear mounted antenna that continually hits drive-through buildings)
and a
|double clear plastic keyer on the center console, so she can "talk" while
|driving (scares the daylights out of me when I am with her but, so far, no
|accidents).
|
|And, for those interested, I am one of those non-hams who can't learn code
for
|my life (see the discussion on no code licenses....that's me, I admit it).
|
|4) If you've read any of her technical postings on here, it is obvious that
she
|knows her stuff, well beyond most engineers I know. When I have a technical
|question in the RF area, I always go to Amor (rather than to my more
academic
|physics peers) and she always amazes me with her knowledge and insight.
|
|5) Obviously, "Amor Powers" is NOT her real name and she does NOT list her
real
|email address. This is for obvious reasons since I suspect she might get a
bit
|of *UGLY* email from a few posters on here. "Amor" uses a psuedonym because
she
|is well known in the radio business and wants to protect her privacy. I can
|totally understand that.
|
|6) Amor has written quite a bit about amateur and CB issues, and has been
|editor of a few publications, although she is in the technical arena right
now.
|
|7) Giving out her call sign on this news group is just like giving out her
real
|name and address. She chooses her privacy and wishes to maintain it, for
good
|reason.
|
|Sorry for this long post but I had a lot to say. I just wanted to set the
|record straight. Thank you.

5942. Blindness and technology

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-24 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <67r91jlhu1@w3eax.umd.edu>
Source record: 183707

I just went through the process of doing an exhibit here at work
for which accesibility of technology for the disabled was stressed.

The tools available to the public are generally cheaper and better
compared to what was available just five years ago. The tools
available to the blind amateur haven't really progressed at this
same rate.

Why is this interesting? Blind hams are anything but inactive.
They solder, they operate, they test equipment like all hams.

HOWEVER,

Look at the number of radios in which a voice synthesizer for
description of buttons, etc., can be inserted...it's not more than
a small percent of them. Sure, a few will go "di-dah-di-dit" when
you switch to lower sideband (L), and the like, but very few
have provisions for digital voice synthesizers to do simple
tasks such as "speak out the frequency" or "read the contents
of the display to me." Seems like there would be quite a niche
for such a doodad.

Computers:

Talking web browsers are a reality. Speech synthesis has really
improved over the past few years. However...

Braille printers...THIS one boggles the mind. A desktop color
inkjet printer can be sold for $99, yet a braille printer costs
the insane sum of $7,000 for a "personal" model.

The next time you're listening to your 2m mobile, and you hear
it beep whenever you change the memory channel, and note that
the beep is slightly longer when you transition from memory
19 to memory 0, or from 0 to 19, or the pitch of the beep
changes when you perform a particular function, think about
how important this might actually be to someone...

Hi.

I bought an antenna tuner (MFJ-949E... it was on sale) and this one
seems to take a random length of wire as an antenna.

If you know something about it, please let me know. I am operating
80m.

What I am told concerning this is that RAdio shack cannot compete in the HF market. It costs too much to have a company make their radio's and they would have to go to a competitor to have them do that for them (ie. Icom).

Liner? You must mean linear!

In any case, if you fellers want some GREAT ARTICLES with diagrams and
schematics on how to build your own tube transmitters etc.,
I have a BUNCH of them on the web, and I have lists of places that can
supply you the parts you need.

I also am scanning in some more articles this week and will add them
soon. So whether you want to run AM, CW, SSB or whatever, take a look
and BUILD THAT RADIO NOW!! (grin!)

>I would like to know if a vertical antenna for 80m will do a good job.

Hello Mr. Slime,

I have a rather unusual 80M vertical that seems to work quite well.

I start with a "high rope" for supporting it, which starts high in a tree and goes out horizontally at a shallow angle to a far distant tree. This gives me a "sky hook" at about 40' from which to hang the vertical antenna. The antenna itself is top loaded with both a coil and a top hat. The top hat is a 12' long wire crossing the top of the vertical in a "Tee" fashion. (It is inserted into the "high" rope in series, so to speak..) Then from the center of that top hat there is a small coil, wound on PVC pipe, with about 10 turns of wire at about 1" dia. All of this is by guess and by gosh - whatever it took to get the impedance at the base of the vertical to be non-reactive. From the coil hangs the vertical itself.

At the base the coax shield connects to two ground rods driven in 4' and to that is connected the 8 tuned counterpoise wires. They stand a foot or two above ground and go to PVC pipes stuck in the ground as supports at 1/4 wavelength out radially. The base of the vertical connects directly to the center conductor of the coax which is about 100' to the shack. I feed it with a tuner and run 1500 watts. I have done A/B comparison tests against an inverted vee at 40' and find that the vertical is comparable. It gives as good a report on 80 M in QSO's as does the inverted vee in many cases. In other cases it's gets reports of about 1 S unit less than the inverted vee. It seems to depend on the direction, the skip conditions at the time, the distance to the other station, etc. In other words, you pays your money and you takes your choice - Hi.

Now Curtis, you take that back. Calling my mother lazy is enough to get her to come over and beat you to a pulp. Lazy she ain't.

By your standards above, 99.99% of the people living on this planet are lazy. Maybe you had better confine your correlation to *hams* who want to be on HF and are not licensed for HF.

e-mails !!

I have an inverted-l which is a wire 135 ft. long. It's described in the arrl antenna book. I have it coming directly from the wire connection on my mfj tuner. It goes up to a nail in the floor joist in my basement cieling, over to the cinder block wall, and out through holes drilled through the block. Put the wire through a hole by itself, not with any other feed lines! It then goes up to an insulator which is hanging from the base of my 2m/440 diamond antenna, which puts the insulator at about 30 feet. The wire then goes horizontal to another insulator which is supported by a 1" pipe braced up by my garage at the property line. I use poly line from the pipe to the insulator. This thing works very well from 40 through 160 meters.

If you're gonna run more than 100 watts on it, feed it to the outside with coax, and keep it away from all objects with some kind of insulators. It WILL arc if it crosses a ground!!!!. I found this out when tuning up with my sb220 amp. It arced to my keyer which the wire was laying across, and also to the shield of a coax that it was crossing. Pretty scary stuff.

It's very good for us guys who dont have towers or big real estate.

Good luck and Happy Holidays...

My friends in Africa are thinking about purchasing a radio/radio-mail system. They are whithout communication currently(no phone, no radio).

They were recommended two systems (from two sources). One recommended a PACTOR2 system(SCS) with a good hf tranceiver. The other recommended a Barrett 923 system (i can't find find very much info/specs on this one, and it seems very costly) which is supposed to be a CLOVER system.

Which setup is best ? Please consider pricing, quality and whether the protocols (pactor2,clover) are available to reach in Africa ? Secure places to call could be few.

I am a novice in radio land, please help!

Thanks all.

Probably no more than 200,000 have been on the air in the last year. Over
half of the 700,000 don't even have a station and radio never enters their
thoughts. Of the truly active hams, the vast majority are ARRL members.

5958. Re: Stories From Our Novice Days -- Please Add Your Own Here

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-24 00:00:00 UTC
From: newsline@ix.netcom.com
Message-ID: <67rfkf$5bb@sjx-ixn3.ix.netcom.com>
Source record: 183723

Mine is a Tech rather than Novice story. Its 1959. I was still WA2HVK and lived in Brooklyn NY.

The sceneario: I have just upgraded to Tech. I wanted to get onto 6 meter AM but I have no money to buy a shiney Gonset Communicator III or G-50. So I opt to build a 6 meter transmitter from Bill Orr's (W6SAI) "Novice & Technician Handbook."

The problem. I do not have the money to buy the right parts, so my mentor Saul "Jommie" Roseenthal (who would later become WA2MSX) gives me an old DuMont RA-109TV chassis from which to scrounge what I can.

Bill Orr's design calls for a 5763 transmitting tube as the final amplifier. That costs more dollars than I have, so I sub a 6BQ6 T-V sweep tube. Orr's design calls for a Triad M-4Z modulation transformer. I have no money for it so I sub another Orr circuit -- a carrier control screen modulator that uses "only resistors and condensors."

And so it went. In the end I had a 6 meter transmitter that ran 17 watts in on audio peaks; a final amp tube that had a cutoff frequency of about 20 Mhz trying to operate on 50 MHz -- while also acting as a frequency doubler. I as lucky to get one or two watts out if I screamed into the mic (an old crystal mic from a defubct Revere tae recorder Jommie also gave me.)

For a receiver I already had a Heathkit AR-2 -- the kit version of a Hallicrafters S-38 or National SW-54. In front of it I added an L&W six meter converter I had bought for $5 from a ham buddy. It had no RF amp stage and heard more birdies than 6 meters.

For an antenna I simply dropped a 50' pice of hook-up wire out the window and used a knife switch for antenna changeover.

The outcome: You will agree that nobody should have heard my peanut-whistle 6 meter signal. But I was a kid. I did not know any better. I called my very first "CQ" on phone on 50.400 MHz. I was answered by a station in Orlando Florida giving me a 5x9++ signal report!

The moral: Nothing is impossible if you are a teenager and if you believe that miracles can happen. They really do. Especially when you happen to hit what was till then the "best year of 6 meter dx in history."

Anyone else remember the summer of 1959?

de WA6ITF

Conventional learning techniques don't work for everyone, that's I highly
recommend the "Code Quick" system.

Hi Tom,

I, personally, would not recommend the Code Quick program to anyone unless
all they wanted is a 5 WPM license and that's it. It's very effective for
that.

I HAVE CODES and most of others who are suggesting to take away the
stupid morse requirement HAVE CODES. In fact, most of news group
users are at least tech+ or equivalent.

We just feel that we have something more important than the code.

I don't think you quite understand the difference between radios over there and radios over here. They're not the same. We have different bands and privileges between the two countries/ITU regions and the radios are manufactured thusly. There is duty to think of. You think it's shipped free from Asia to North America? And what about manufacturer's warranty? You buy it over there or from over there and you're dealing with a totally different company. You will not get warranty support domestically. Oh sure, you'll save a few hundred bucks....but when something goes wrong with the radio...you'll be spending that and more to get it repaired.

Oh, but that's not what you wanted to hear? So sorry. That wool is awfully heavy over the eyes ain't it?

So you feel that if a person doesn't want to go through the existing
procedure to get a drivers license he can either cheat to avoid the
system or attempt to change the rules that have been the standard for
decades and by lowering this standard (in the case of driving) endanger
the general public at large, in the case of the amateur service create
an amateur service incapable of working within the rules simply because
"it was easier".
I contend that becoming an amateur op is not easy, neither is
becoming anything that is a real benefit to society. Just to satisify
the lazy among us is not in itself justification to lower our standards,
its this kind of thinking that can endanger professional standards such
as becoming a Doctor or similar profession. I for one do not want lazy
dummies with a med school diploma or an amateur operators license.
Happy Holidays
Al

Were upping our standards, so up yours...Pat Paulson

Really? Exactly what "facts" lead this this gem of wisdom?

Next I suppose you'll claim that thanks to the no-code license the sun
won't go nova.

>Many people don't realize that opening HF bands to no-coders will
>lower the price of HF equipments.

Doubtful. Basic economics of supply and demand will dictate the price for
equipment. Eventually supply and demand will reach an equilibrum, resulting
in a stable price.

>In Japan, HF equipments are much cheaper than the those in US & Canada
>(but all the other electronic devices are much expensive) because they
>have millions of people to buy them.

Yeah, we all know. We can't turn our HF radios on and find a free spot
on HF, the bands are so overwhelmed with millions of JA operators.

>If Morse code could be redefined so a 'dah' is five
>times as long as a 'dit', then my Dad could learn it.

I admit it has been a while since I looked at the VE testing requirements, but I don't seem to recall defined anywhere in Part 97 exactly what a "dah" is versus a "dit". Thus, it would seem to me, that if your father needs to have dits/dahs redefined to pass the test, that VEs should be able to accomodate his needs. Also, don't programs like SuperMorse have tone duration settings (its been ages since I've used one so I don't recall, but I'm pretty sure they did when I used it long ago.)

>The great majority of the no-code techs that I know simply do
>not consider the rewards of HF ham operation to be a great enough
>incentive to offset the hassle of learning Morse code. The majority
>of the ones who have upgraded to tech+ were not impressed enough
>with tech+ HF privileges to get their general.

These are "okay" attitudes. For instance, I see little value in upgrading to extra from my advanced license. The key is: do they bitch about it? See, if they have made a value judgement about the utility of morse in their communications toolbox, and have decided they don't need CW and don't need HF, that's fine. On the other hand, if they have made the value judgement, and continue to bitch despite knowing what the requirements for licensing are, then I can't accept their decision.

>The advanced class license offers the most HF privileges for the
>least amount of effort.

Probably. One reason why I chose to get licensed as an advanced was it offered the bulk of HF operating privs for 3 examinations. Maybe someday when I really want to work that DX down in the lower 25kc, the marginal utility of taking two additional examinations will become great enough that I'll actually do it. But, not in the forseeable future.

>IMO, a tech+ license is approximately
>1/3 the effort of an advanced license and yet they are not
>rewarded with 1/3 of the HF privileges.

C'est la vie. Nothing is fair about life. The sooner you realize it, the better off you'll be. Americans somehow have this noble concept that everything in life should be "fair".

I wondered why I have a recent mental block at about 35WPM. Must be the pitch I'm listening to it with. When I was younger and faster, I used to listen a few half steps higher on the musical scale. I developed a permanent built in "notch filter" at my old preferred pitch.
Has anyone else noted this?

Do we need maximum exposure level standards to certain pitches, due to damage from a hearing disorder like carpal tunnel syndrome for the ear?

most xcvrs can be reduce in max pwr output through an internal adjustment or mod. typically this involves adjusting a drive pot or changing a resistor value. On my TS-50 there are three power levels, set at 10, 50, and 100 watts. I work a lot of RTTY so I reduced the 100w setting to 75 watt. I also reduced the 10w setting to 4w, so I could sign /QRP, and so I could use the rig on 11 meters (Still not quite legal since tuning to other than pre-set channels is possible) but at least the power output is legal and the rig sounds just like any other CB. Why? I don't know... just natural ham curiosity and desire to tinker I guess. Anyway, as far as the front panel controls go, My rig will run either 75, 50, or 4 watts. The mod was accomplished by adjusting two of the three drive pots, and the mod, like similar mods for other rigs, has been published repeatedly. Perhaps a radio so modified will meet ur legal requirements. If not, maybe REMOVING a stage of amplification would satisfy the requirement.

I believe you will also want to disable the Audio amp. This is easily done. easiest way is just to desolder the wires going to the mic jack, but then again you might be required to actually remove an amp stage.

There are a lot of CW QRP kits and even ready-built radios on the market. Some, such as the TenTec Argonaut (I think thats the name of this model) are full-featured rigs. Others, such as the MFJ9020 are single band CW only rigs at modest prices. The 9020 costs under $200 new in the box, and puts out 5 watts. Other bands besides 20 meters are available. Hard to miss MFJ's ads... they take out several pages in Ham Trader and QST every month. They sell mostly through direct mail order.

Lastly, you can certainly build a transmitter, and use it with a good SWL receiver that has a CW mode and a narrow filter. You can buy botom of the line kits for well under 50 bucks, or build from scratch out of junkbox parts and a crystal or two, but I would try first to buy ready-built gear and get on the air first before you tackle a construction project, unless you have someone to help you get your transmitter built and working, who has some knowledge and experience on the subject. homebrew later... for right now just try to get on the air with a legal rig

In case you dont have access to American ham magazines, MFJ enterprises can be reached at:
P.O. Box 494
Mississippi State, MS 39762
USA

or check out their website at http://www.mfjenterprises.com

good luck, Yaacov, and I'll see you on he HF bands

> should be "fair".

Yep, they are noble concepts handed down from the Founding Fathers
who used the "fairness" arguments with King George, to no avail.
It's a shame that you don't seem to care about fairness. But have
a bunch of happy holidays anyway.

Hi Amor, I have several "notch filters" in my hearing. Unfortunately,
one of them is the exact pitch of my ICOM CW filter. I use a tunable
DSP filter now at around 500Hz and it works well.

Hmmm. That would seem to contradict what I learned in Astronomy 101
a decade ago. It was my understanding that based upon our sun's mass
that as it converts its hydrogen to helium, we could expect the sun to
swell in size to well over 1 AU. Then, a series of hydrogen flashes,
followed by a small nova, with the remaining core collapsing into a
white dwarf. But, I suppose astrophysics has matured since I was in
college and popular theory may be different today than then. Too bad
we won't be around to find out -- it certainly would be a sight to see!

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the experience of HF methods and technology, and the "mechanics" of an HF station and the "feel" for propagation and international DX contacts. The implications of this will not intirely be felt for another 15 to 20 years.

Cecil Moore sezz:
> I've been a ham for 45 years and I think the Morse code exam
> is extremely bad for the Amateur Radio Service.

As a relative newbie (with only 30 years ham experience) I've got to agree with you Cecil. CW is my favorite mode. But the code exam is killing the future of our service.
Ham Radio is suffering from a "Bad Rep'utation" amongst high tech experimenters and inventors.
I have so many friends and associates in Silicon Valley who would make great ham radio operators, but they are completely turned off by the code exam. Even when I tell them "There is a no-code license!", they ask me: "What's the catch?"
I have to tell them that HF access is denied for no-coders. They say, "Forget it!". We, the Amateur Radio Community, are the ones who are missing out on their talent.

>Let's face it...amateur radio is a waste. It serves no real purpose and

Its interesting, I would suggest that if it weren't for amateur radio, in its entire history, there would be very little interest in any kind of radio use.

In my opinion, most of radio today is as a result of the commercial world seeing amateur radio in actions, individuals or groups, and copying it or adding to it, in the commercial world.

CB is a spin-off of amateur raido.

Cell phones are a spin-off of our phone patches.

ETC

Our present problem is that amateur don't have the financial backing that the commerical fellows do.

In short, I would not sell amateur radio short.

Season's greetings

A few years ago at an amateur radio exibit I volunteer at, I met a fella who was going for his basic exam, I am a Canadian amateur. He was totally against cw and could not see any value in it.

The following year, he told me that he had gotten his basic and was not studying for his 12 wpm exam.

Remembering him from the previous year, I asked him what changed his mind about cw. He told me that we was on 2 meter and 450 for a few months and began to get tired of the junk he was constantly hearing.

After chatting with some of this other club members he decided to try for his 5 wpm hf endorsement.

He passed and decided to upgrade to the 12 wpm priveledges.

I asked him how he liked hf voice?

He told me he was seldomly on hf voice. After he had gotten comfortable with cw he found himself using cw more and more.

He could now see the benefit of cw. As he put it, the benefits of cw are not something you can put words to, it was more of a feeling.

He was also involved in helping to teach cw at his amateur club.

Source record: 183507

Hi ?

I read your message with interest.

I remember many years ago, during the early 60's, when I felt much the same way.

I was learning the code but could not see any relavent value in it. My uncle was tutouring me and encouraging me every step of the way.

In Canada, here, we have a provision which allows disabled people to get certain exemptions if they had a physical reason they can't do a particular part of the exam. As I was learning the code, and having major problems with it, I was frequently tempted to ask my uncle if he could get me in under this exemption. I had polio and thought it might be a benefit to me, in this case.

As I practiced the cw I got better, makes sence.

I finally passed the exam, on my own.

In the back of my mind was the thought that as soon as I passed our advance licence, 15 wpm, away would go the key and out would come the mike.

As I progressed through my first year with cw only on hf, varioius members of the clubs I belonged to strongly advised me not to use voice, we could use voice on 30 mhz and higher, as voice was a killer of code.

As time progressed I found that I started to enjoy cw more and more.

When my advanced finally came, I got out the mike and started to get involved in the voice world. But, I also found myself spending much time on cw.

As time progressed and I looked at my log book I found that I was spending more and more time on cw.

It is hard to explain but I found cw more interesting than voice.

This cw lasted untill 2 meter fm came to this area, toronto.

I got quite involved with fm and public relations work but found that I didn't really do that much 'talking'.

When packet came to this area in the mid 80's, I got fully involved in it.

Voice is fine but I found that the non voice modes were, for some
reason, more satisfying.

If you have any desire to use hf may I suggest that you give cw at
least a years use. I know it is extra work to copy cw, as opposed to
voice, but there is something about cw that does offer more.
Unfortunately you have to experience long term use of cw before you
can really appreciate its value.

I realise that other services have moved away from cw, eg the
military, but I would believe that if a private in the army were to
ask his commanding officer if he could be trained in morse that, after
questioning his motives, would not refuse him.

Having an active knowledge of morse can have its benefits, though they
may not be obvious to most.

Yes it is more expensive to train a military person in the use of
morse but i am sure the military gets that training back in more ways
than one.

On what basis do you make this claim Armond? This sounds like a Jeff Herman,
"make it up to suit my convenience" sort of "factoid."

Clearly there are a few silent keys in the license totals, but to assert
that over half a million licensed hams got the license and have kept it
renewed, yet don't operate, have stations, or "radio never enters their
thoughts" makes you sound like you've been smoking something funny.

Bonjour.

Merci d'une certaine information consid�rant quelques filets tenus
dans les r�gions orientales du Canada.

J'ai acc�s 80m, mais je n'obtiens pas de bons signaux ni puis
transmettre les signaux forts en raison de la limitation de l'espace
(je vis dans l'appartement. L'antenne est int�rieure et je puis
seulement voir 20% d'horizon. 80% de mes signaux sont de fa�on ou
d'autre bloqu�s hors fonction)

Merci encore. D'ailleurs, vous avez un indicatif d'appel gentil!!

S'il vous pla�t l'excuse, mais moi ne parlent pas bon fran�ais.

Merci :)

If the ARRL had "done just that", they wouldn't be embarrassed about releasing the details of the survey. The fact that they have refused to release the data base details tells me that there is something fishy, i.e. statistically invalid, about it. Figures don't lie, but liars figure.

The set of primarily ARRL members who chose to return the survey is certainly not a random sample of the ARS if for no other reason, than the ARRL is on record for continuing federal governmental welfare support for Morse code testing. What would be statistically significant would be a random sample from the ARS members data base, instead of the ARRL members data base. I would be willing to contribute money and/or time to such a survey.

Hi Amor, from my statistically insignificant sample, I have concluded that there is a correlation between Morse code ability and musical ability, which is genetic. Does anyone know a "tone-deaf" person who is good at Morse code?

Also depends on your mind chemistry. I know a guy whose speech processing is interrupted every few seconds by a highly localized brain chemistry condition. Try copying Morse code with two seconds missing every fifteen seconds or so.

My Dad can't carry a tune in a bucket. He also cannot tell the difference between a 'dit' and a 'dah' at any speed. An 'A' and an 'N' sound the same to him. He hears two pulses of the same perceived duration in either case.

I agree. In Japan, if you finish the driving school (w/ specified
amount of driving time), you don't have to take a road test.

>If you cannot drive or see then you are a serious danger to yourself and
>other people on the road. That's the reason why the road and eye test are
>required - so you don't kill yourself or some 16 year old kid on the road.

yeah, I disagree with taking the eye test away. However, I disagree
with the idea of making an age who can drive and such.
Sometimes, the adults are much dangerous compared to some kids. (who
drinks and drives ?? If you allow kids to drive, I doubt many kids
drink and drive at the same time... kinda like that)

>: applicants. I also would like to see mail ordering of firearms legal, like

>That's prohibited because the wrong people may end up with guns. Again,
>the law is in place for a good reason and it's protecting lives.

what I want to see is:

1) Prohibit the fire arms OR
2) Free the fire arms

I want to see either strict prohibited situation (like Canada) or one
can order it by the mail as someone suggested.

>: it was in the 1960's. I also think that all types of drugs should be
>: available over the counter, and tax free.
>
>Then people may end up taking the wrong drugs in the wrong doses which
>could end up killing them. Certain drugs are available by prescription
>only to protect lives. Again, a good reason.

I want to see either the strict prohibition or the freedom.
take the alcohol. why adults are allowed and kids are not allowed ??
if the adults are allowed, the kids must be allowed also. In this
case, I support the freedom. -- anyone should be able to buy it
without any restriction.

>: In fact, the hell with all taxes, I would like to see them go away.

>Go outside into your town/city and look around you. If it weren't for
>taxes all that stuff would look pretty damn bad, or may not even be there

>at all. One good and obvious reason to have taxes is to keep the roads
>you drive on in one piece, for example.

go to japan. you pay $500 for driving the highway.
:(

>Now, as for that CW requirement. Well, I guess I haven't been able to
>find any good reason for that one yet. Let me know if you ever do.

remove CW requirement. if one likes it, very good. don't force it
to someone else. forcing it will discourage many people from ham
radio.

RSGB Membership 1986-2006?

Number of Members Year
38,000 * 1986
37,000 * 1987
36,000 * 1988
35,000 * 1989
34,000 * 1990
33,000 * 1991
32,000 * 1992
31,000 * 1993
30,000 * 1994
29,000 * 1995
28,000 * 1996
27,000 * 1997
26,000 * 1998
25,000 * 1999
24,000 * 2000
23,000 * 2001
22,000 * 2002
21,000 * 2003
20,000 * 2004
19,000 * 2005
18,000 * 2006

In the last 11 years membership has fallen at the rate of 1,000 members per year.

Will the fall continue at that rate or as average age of the members rises, will the rate increase to say 2,000 per year?

The RSGB only publish the membership figure once a year.

uh hmmm .

Very interesting that someone should bring this up.
It brings to mind my .> However, Is that not what the
Amateur Observer System is For

If not I definately must have an out of date rule book. Even if it
doen't shouldn't Common Sence Say that we
should police ourselves if we really are interested in ham radio and in keeping ham radio
alive and kicking through the next millenium so our
children/grandchildren and the like will have the same enjoyment we
do I will say it again WE MUST POLICE OUR SELVES AND
CLEAN OUR OWN HOUSE BEFORE WE TELL OTHERS TO DO SO.

In this the digital age someone Should be able to assist in the
CAPTURE OF BOOTLEGGERS AND PIRATES. if not, lets just let them HAVE
HAM RADIO. We are doing nobody any good sitting here yapping and
complaining about something we can help to correct.

Things like this make me wonder WHY i became a ham

Well folks...
Today is the day to reflect on all the things given us. We have the RIGHT to voice our opinions, to seek advice, and to argue. This forum is a medium that I have been reading for a while and occassionally I put in my 2 cents worth. I read the code vs no code arguments and the name calling and insults. This is not a day for that. Be thankful, friends. Take a moment. Reflect for a second. Tell your adversaries Merry Christmas. Turn the other cheek just long enough. We can duke it out later. Merry Christmas to all where ever you are.

Rick Collins, N8CZA

I'll second that. Another thing, unless 10 is REALLY open it won't do much good for public service. The "big thrill" is that it's FUN. Remember FUN?

It is apparent that Masa has forgotten that he was the one that came up with the '14m' band in a previous post... He can't answer the question, so he skirts the issue. We must remember that Masa admits he memorized everything on his amateur exam and promptly forgot it after passing the exam...

I need $$ for down-payment on house!!!

This 920 is "out of the box" new condition, used for only 1 month since it was purchased in November of 97. It also includes the MD-100A8X desk mic w/ tone controls and the SP-8 External speaker w/ filters

All are in immaculate condition! I have all shipping cartons, manuals, receipts and Yaesu Hat.

Asking $1800 for all.....price is FIRM though.....serious buyers only pease.

I have no musical ability--can't find a rhythm to save my life. I passed the 5 wpm with solid copy after just 8 days and upgraded to Extra within 90 days. It can be done.

In 1973, I first got interested in radio--let the code (my unwillingness to learn it) scare me away. Spent the next 23 years as an SWLer and MW DXer. I learned about the Technician Class ticket and was going to go that route. A gentleman who would become my elmer challenged me to go the Technician Plus route. I took that challenge and earned my ticket 8 days later at the first possible test session. Took 30 days to get some HF equipment--made my first nervous QSO with my elmer. Got over the fear and got on the air. Made QSOs on 40 and 60 CW daily--passed my General after one month. Still challenged by my elmer, I upgraded to Advanced after 30 more days and then Extra. Somewhere along the path, I discovered that CW was fun.

6028. How to calculate the baud rate of a morse signal

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-25 00:00:00 UTC
From: Rye Gewalt <ryeg@vais.net>
Message-ID: <34A28B38.37F0380E@vais.net>
Source record: 183561

Here's one that I can't seem to figure out and can't find it in any of my reference books -- even the old ones.

How does one figure out the equivalant baud rate for a morse transmission at a specific WPM rate? (ooooh! Is this gonna turn into a baud rate vs bit rate argument?????)

I know a bunch of statistics, but there are several holes and possible errors that I need help/verification on.

If one assumes that a dit is the basic baud then:
Dit = 1 baud
Dah = 3 baud
Intercharacter space = 1 baud (?)
Interword space = 3 baud (?)
Characters per word = 5
Bauds per character = ?????? A mystical average probably set in antiquity

I guess that if I knew the number of bauds per word the problem would be easy to solve....

((NumberOfWords * 5 * BaudsPerCharacter) + NumberOfSpaces*3)/60 = baud per second

If anybody has this at the the tip of their tounge, I'd certainly like to verify my understanding. The FCC or sombody that does code testing probably can answer this.
Perhaps there are some FIST folks out there who have this at their finger tips.

I should know this since I taught CW in the military, but that was long ago and far away --- and my memory was better then.

Merry Christmas and Happy Holiday

I am looking for some information on how to build a keying circuit to use the audio output of one radio to key another radio and retransmit the audio. Sort of like a cross band radio does only I am going to use two diffrent radio. Spacifically I am using an HTX-202 for the reciever and an HTX-404 as the transmiter.

Any information you might have would be helpful. Please E-Mail them to brad@dialnet.net

Thank You.

WK1V wrote:
> Cecil, Everyone you know has some kind of code impediment.

Nope, only two. I have firsthand knowledge of only two people who have ever tried to learn the code and could not for physical reasons. However, there is nothing wrong with either person. They both have high IQ's and are hard-working individuals, certainly not lazy. If Morse code could be redefined so a 'dah' is five times as long as a 'dit', then my Dad could learn it.

I personally know about 100 hams from all different classes. There are pro-code-test folk, slow-code-test folk, and no-code-test folk. But only one of the hams I know has adopted the

Morse Code Creed - System of Beliefs and/or Opinions.

The great majority of the no-code techs that I know simply do not consider the rewards of HF ham operation to be a great enough incentive to offset the hassle of learning Morse code. The majority of the ones who have upgraded to tech+ were not impressed enough with tech+ HF privileges to get their general.

The advanced class license offers the most HF privileges for the least amount of effort. IMO, a tech+ license is approximately 1/3 the effort of an advanced license and yet they are not rewarded with 1/3 of the HF privileges. IMO, this situation amounts to a dis-incentive from tech to tech+.

> the same time. The net increase is only 7582
> over December 1, 1996.

> Of the total, here's the breakdown by license class.
>
> Extra: 75,694 an increase of 2176 which represents
> an increase of 2.9%.

Also, 1,594 existing Extras thru Nov. of 1997 either died, or retired
from the hobby.

Note that taking out the above 1,594 that did not renew licesnses of
Extra in the first 11 months of '97, we actually have 3770
new folks who have passed the 20 wpm test in 1997 to Nov.

With 2176 new Extra Class holders, perhaps we have an explanation
for the long delays in obtaining new WBL iambic paddles or
the newer Vibroplex models, such as the dual iambic/straight
key models!

Here are the license expirations for 1997 through Nov. 1997 by
class of license:

Extra: 1,594

Advanced: 4,233

General: 6,174

or, some 12,000 expired "higher" class licenses.

These people have either become SK, as listed monthly,
partially in QST, or lost interest in the hobby and dropped
out. Complete statistics for all classes, by month can be
found at http://www.speroni.com/FCC/Expired.html

For the statistics reported by W5YI to hold, there must
have been new licensee holders added to each of these
"higher" classes of licenses both by upgrading and just
plain new licenses. And sure enough, this data is also

available at http://www.speroni.com/FCC/Up_to.html
for upgrades and at http://www.speroni.com/FCC/New.html
for new licenses.

So, though the total numbers of license holders is not
much changed, there have been a lot of new so called
higher class license holders gained. As the "old timers"
pass away, or loose interest with age, they ARE
being replaced by lots of people who ARE buying
new gear. Obviously the novices, techs and tech+
folks are upgrading to more operating privileges.
See http://www.speroni.com/FCC/Up_from.html
for a listing, by month, of the counts of those
upgrading from a given license class -- there
are a lot, each month.

So not so much doom and gloom; this is the happy
time of year!!

Have a great Holiday Season with your family and
friends.

73, Jim, KH7M

Cecil wrote that his dad cannot tell the difference between a dit and
a dah - they have the same time duration to him...

Hi Cec,
That might cause a problem for your dad on the highway. Suppose your
dad is preoccupied and begins to drift in my lane. A short tap on my
horn might be meaningless to him (we usually reserve those for "Hey,
the signal light is green - please go"), but a long blast of my horn,
if he can't decipher time durations, might also be meaningly to him.

I honestly find it difficult to believe that your dad is unable to
distinguish between a 1/4 second "dit" and a 5 second "dah" of a
car horn.

Merry Christ-Mass!

IOW, if a CW signal isn't tuned to a perfect C♯, a "tone deaf" person won't be
able to copy it.

...and all this time I've been tuning my signals to E flat.

Perhaps they should carry more used equipment. A Kenwood TS-530 for $300 or
a TS-430 for $450 is a very good buy for a newbee to amateur radio.

VHF and UHF equipments were extremely expensive before the no-code
exams.

Many people don't realize that opening HF bands to no-coders will
lower the price of HF equipments.

In Japan, HF equipments are much cheaper than the those in US & Canada
(but all the other electronic devices are much expensive) because they
have millions of people to buy them. It used be ICOM-706 was on sale
for around $700 - $800 US.

Source record: 183377

Yes, this is so true. Many manufacturers are dropping synthesizer options from their radios. Many new ones are menu driven things almost impossible for the blind to operate. As far as I know, Yaesu has not made a radio with a synthesizer for a long time. Kenwood has dropped this option in their vhf stuff, not sure about icom. I hate to see this trend going this way. A lot of the time it is just a simple thing like beeping on memory 0 or something like that. Wish we could get the manufacturers to pay attention.

Code tests are a (poorly implemented) operational examination. I fail to
see the logic in blaming the code examinations for piss-poor theory
exams. Perhaps if we sent all theory exam questions via morse, and required
applicants to send their answers in morse, things would be better.

I need help with a possible bad keypad on a ADI AT-201 Handheld radio, I was resetting the CPU after the MARS/CAP stuff got programmed into it, and the 4,8,0, and # keys stopped working shortly after. I wonder if anyone knows if this is a CPU problem that can be reset, or a physical problem that needs to be repaired. An immediate response would be helpful

Thanks

>
>How does one figure out the equivalant baud rate for a morse
>transmission at a specific WPM rate? (ooooh! Is this gonna turn into a
>baud rate vs bit rate argument?????)

Could be. Baud is symbols per second, and symbols and bits don't
necessarily have a one to one relationship.

>I know a bunch of statistics, but there are several holes and possible
>errors that I need help/verification on.
>
>If one assumes that a dit is the basic baud then:
>Dit = 1 baud
>Dah = 3 baud
Intracharacter space 1 dot time
>Intercharacter space = 1 baud (?)
3 dot times
>Interword space = 3 baud (?)
7 dot times
>Characters per word = 5
>Bauds per character = ?????? A mystical average probably set in
>antiquity

There are five different symbols used in Morse. They are the dit, the dah, the
intracharacter space, the intercharacter space, and the word space. These
symbols are not divisible for the purpose of calculating baud. (Symbols aren't
required to have the same length in the definition of baud.)

The mystical word used as a reference in Morse is PARIS. Breaking it down
into symbols, P has 7 symbols, A has 3 symbols, R has 5 symbols, I has 3
symbols, and S has 5 symbols. There are also 4 intercharacter space symbols,
and a trailing word space symbol. That gives a total of 28 symbols. At 5 WPM
we have 28*5 = 140 symbols per minute. Divide by 60 and we have 2.3333...
baud.

Now that's the technically accurate way of calculating baud for Morse. But
traditionally it isn't done that way. Each symbol is counted as the number
of dot times it occupies, PARIS has 50 dot times, and speed in dots/sec is
WPM/2.4. For 5 WPM, dots/sec is 2.08333... That isn't baud, though some
amateur texts have called it that, and it happens to work out to be reasonably
close to the true baud.

Now dots/sec is useful to us because a dot is a half cycle of a square wave. So if we use a square wave master clock in a keyer, we set it's frequency in Hertz to be WPM/1.2 in order to get the speed we want according to the PARIS standard.

The word PARIS was chosen as the magic word because it is statistically the average word length in dot times of English language plain text. For cipher text, the magic word is CODEX, which is 60 dot times. This is 1.2 times as long as PARIS in dots/sec, and represents the statistical average length of 5 letter cipher text random groups in dots/sec. Now this is handy because 1.2*WPM/1.2 is just WPM. So we can set our master clock frequency in Hertz to equal the desired cipher text speed in WPM by just saying Hertz=WPM.

Note that cipher text WPM is faster than plain text WPM. The old FCC tests, and military qualification runs, reflected this by requiring you to copy plain text at a higher speed than 5 letter cipher groups.

Pretty non-standard code you send there, Jeff. If a dit is 1/4 second
duration, then a dah is 3/4 second duration, not 5 seconds. That's
a *huge* perceptual difference.

Anyone who takes the time to learn the code is not lazy. Nor is the no code who has a good electronics back ground and passes the no code technician. The older hams who firmly believe that the no code license is the down fall of ham radio have done little if anything, to help police our hobby to keep it from going to chicken band. Ham radio has a tradition and a fine history of self policing so that we don't loose our priveledges.

As for not opening the case to work on the radios it is becoming fastly impossible to work on these radios with out being nearly a commerical radio license holder, and some very expensive test equipment, and tools. The average ham can barely afford some the radios we are buying let alone try to buy the equipment to build and maintain them.

But like someone said, this is not what this news group is for. So I'll shut off my flame thrower and ask that others stop flaming hams

Actually, NO day is the day for "that."

We should attack each others OPINIONS but not each other.

It takes a mature individual to separate an opinion from the
individual presenting it; unfortunately, maturity seems to
be in short supply in these parts.

Maybe those who are in short supply may find a box full of
it under the tree, or something. Maybe it was there all
along but just being ignored.

At least one can hope.

>Most are under 50, however.

Age is irrelevant. Where they operate appears to be. I've found in my own
purely unscientific queries that most hams who spend the bulk of their time
operating on VHF and above tend not to be ARRL members.

> The last time I spoke at one of the local clubs, I asked the same question.
> And out
>of a roomful of members of an ARRL Special Service Club, less than half those

>who aren't even active enough to show up to a club meeting.)

A local radio club usually implies a VHF club repeater. Maybe the 50% ARRL
members are at home working on HF rather than dealing with local VHF
repeater politics.

>When I asked who in the group were Dxers or contesters, most who raised their
>hands were from the ARRL group. But when I asked who did public service, the
>non-ARRL group was a slight majority (and this has been ARRL's Year of Public
>Service).

So, let me interpret. When you asked who does DXing or contesting, "most"
of people from the ARRL group raised their hand. Of course, we don't know
the relative size of the ARRL group in comparison to the remainder of the
crowd. Then, when asked about public safety, the "majority" went to the
"non-ARRL crowd". Again, not surprising -- If there were 5 people in the
"ARRL group", and 50 people in the "non-ARRL group", even 6 non-ARRL
members raising their hands would be a "slight majority".

>And when I asked for a show of hands for those active in technical
>experimentation, disproportionately few ARRL members raised their hands.

Not surprising, really. There isn't much technical experimentation going on
on HF these days anyway.

>I routinely ask these sorts of questions when I'm asked to speak to a club,
>and the responses of this group were fairly typical of what I've gotten at
>other

>club meetings over the last few years.

Beleive it or not, I tend to agree with you. As member and officer of a local radio club, I've found the older members more likely to be ARRL members, and less likely to show up at club meetings. I have found younger members less likely to be ARRL members, and more likely to come to club meetings.

However, when I've privately asked non-league members why they haven't joined the ARRL, the most common response is 'not enough money'. Most have said that, given the choice between spending $25/year to be a member at our club, or spend $35 to join the league, they'd rather join our club. Since our club gets a QST subscription, they still get all the "benefits" with none of the expense.

Yes we all can get along,,,but first you have to understand that CW is for the people who enjoy it.....with an amateur call or not.......and for the amateurs and radio hobbyists who do not enjoy anything about CW....they also have a very important roll to play......When everyone will see that point of view THEN ????

> to him. He hears two pulses of the same perceived duration in either
case.

Knew an old local guy for a while who had a similar problem. The Navy found out way back in the 40s that he was "totally tone and pulse width deaf". That was his term for it. Basically the best he could ever do was 5 WPM till an accident happened one day. A short developed on one of the power supplies that caused the receiver to "blink" as the CW signal was received. IE when there was no signal the radio light was bright. When a dit or dah came in it would dim. This old guy watched this for a while and tuned to a high speed operator and managed to copy 20+ WPM by watching the blinking rig.

I met him years later at his shack in Santa Barbara when I was a budding novice. Being totally deaf by that time CW was the ONLY mode he could operate. I looked inside of his kenwood receiver and noticed that one of the speaker wires had been clipped. The receiver made no sound. Plugged into the phone jack was a little circuit he had built which used a transister to switch voltage to a small light. When a dit or dah would come in the light would light. I watched this old guy tune in a CQ on 20 meters that was ALOT faster than I could copy as a novice and carry on a complete QSO in total silence!

I left his house that day an in 4 months I was copying 20+ WPM. CW is all I ever did after passing my General. It was a real lesson to see someone with a disability like that who found a way "around" the problem. I watched this guy work at field day one year. He sat in the CW tent and copied CW by placing his fingers on the speaker diaphram! CW by braille!

I heard that when he tested for his extra in Los Angeles (back when you had to go to the FCC like I did for my General). He brought his own code oscillator (with the light) and key. The inspector was a little miffed that he could not use the "standard" tapes for testing and would have to "send" to this guy. So he started at about 25 WPM even though the test was supposed to be 20. This guy copied EVERY letter flawlessly.

The poor guys health failed and he passed away about 5 years after I met him. Now days I use a lot of digital modes. Rarely voice. I still tune the CW bands and listen in and sometimes fire up a QSO. Mostly in this guys honor. For the life of me I can't remember his call sign or name. Oh well!

Mark - WS7M

6059. Us vs Them (Re: Can't we all just get along?)

<Daveschneider@worldnet.att.net> writes:

>Yes we all can get along,,,but first you have to understand that CW is
>for
the people who enjoy it.....with an amateur call or not.......and for
>the
amateurs and radio hobbyists who do not enjoy anything about
>CW....they
also have a very important roll to play......When everyone will
>see that
point of view THEN ????

But this will never happen. It will be "us vs them", "code vs no-code", until
either the pro-code, pro-ARRL supporters are largley squelched by the natural
effects of old age and receive the silent key...or else their stubborness and
refusal to allow the modernization of amateur radio results in it's premature
death due to insufficient numbers of operators to warrant retention of the
frequency allocations the service has been granted. Whichever comes first.

"Where's that big 'Ol CB RAMBO?"
"I wanna hear him TALK TOUGH!!"

I need technical expertise. Mr. Alan Yu has been bugging the
Talk.Politics.Guns NG with this "mind control" stuff for months.
Please read his post. How much is bullshit? How much is fear?
Some guy wrote a book and Mr Yu has been milking for dear life.

>Mike
>....KC0CHK

Actually, the present cost of a basic HF rig, is much less in terms of
percentage of yearly income than 20 years ago or 40 years ago. The
real reason for the decline in the absolute numbers of ham stores is that
hams are cheap, and toll free numbers meant that local stores have to
compete with HRO, AES, and all of the other large dealers who advertise
their prices. A difference of $1 on the price in an ad can generate sales.
When you add in sales tax in many states, most local stores are at a
severe disadvantage, and the need to have a technician for warranty repairs
also adds to costs that can't be made up for in the cost of amateur gear.

It's also true that a rig from the 1980's, now approaching 20 years of age
is usable still for most of the things that hams do with HF rigs. Thus,
many hams have no incentive to upgrade their rigs, and those who do
need the latest and greatest don't number enough to produce even more
volume sales and keep local hams in business just selling HF. I suspect
for example that Radio Shack is now the largest seller of two meter
equipment in the United States, but ham radio sales are a very small
percentage of what Radio Shack sells in a year. It's also a strange
return to the ham market for Radio Shack. It's not the high cost that
keeps new hams away, it's the inability to justify the expense of good
HF gear regularly by most hams, when the old stuff is almost as good,
and the newer stuff just has more bells and whistles. You can buy a
used TS-50 for $600.00, and that's for one in good shape. You can buy
a new Alinco DX70TH for $950, and less for a used one. Amateur radio
need not cost too much if you're willing to scrounge. You can buy used
antenna tuners, build wire antennas and verticals for HF, or even build
a beam for the cost of materials and an antenna book. You can even
buy a new Ten Tec Scout with one band for $500, and buy the modules
for each band as needed. OK, no 10 meter FM, but converted CB rigs
used to get put on 10 Meter FM regularly. If you're truly desperate, an
old old rig like an HW101, which used tubes is still possible to put on
the air cheaply too, as are other similar vintage rigs. If you want to be
on HF, you can be even on a budget.

We have lots of reproduction dial scales for old radios... Admiral to Zenith.
If we don't have it we will make it! New this month: Airline 62-288, Atwater
Kent 70, "L chassis", Packard Bell 51F, RCA R4, Zenith 805 and more.
Visit our web page at: http://members.aol.com/RockSeaEnt/
or E-mail for info and price list: dials@juno.com
or just call: (805) 646-7362. Thanks, Mike

I use the Gap Titan on 6m and 2m also!... On 2m the swr is 1.2:1 across the band (at antenna, not in shack) and works great. I loose abt half of the power (135' of rg213 to antenna) by the time it gets there and it still hits repeaters better than a 1/4 w ground plane with 15' of cable.

You can (i do) also load the Gap Titan on the upper part of 160m... I run abt 30w with my Kenwd 850 's tuner (abt 4 : 1 swr) and work my East coast net in the am... No Problem!

Hi Anthony, A person can bite the bullet now and learn Morse code or wait until the rules are changed. I am working to get the rules changed but IMO biting the bullet now, even though it might be a waste of time, is preferable to losing out on the fun for the next few years which includes the height of the next sun-spot cycle when we can talk all over the world on 10 watts. I would advise anyone who can, to learn the code. It's presently worth it.

IMO, Even if *every* ham outside of the ARRL would suddenly be in favor of dropping the Morse code testing requirement, don't hold your breath awaiting change, given the ARRL/FCC concrete mindset. IMO, they are likely to throw out a well-picked-clean bone, like 10wpm for generals. Everybody else can eat cake. Ready to storm the Bastille? :-)

FTV is a software only package that can be used to receive images from
Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from radio
telex services, Morse code, as well as Amateur Radio FAX, SSTV, RTTY and CW
signals. It can also transmit Amateur Radio FAX and SSTV. No external
hardware, other than a radio, is required, as all the necessary signal
processing is implemented in software.

The main features include:
WEFAX, FAX, SSTV, colour SSTV, RTTY and CW operation.
Transmits 6 FAX modes, 8 monochrome SSTV modes, 10 colour SSTV modes.
FAX operation supports APT signal recognition and scheduled reception.
No external decoder or converter box is required.
Signal analysis is provided on all modes.
Many parameters are adjustable while receiving.
Full recovery from wrong mode settings is possible.
Program works in real time (about 1 second 'DSP' time lag)

I have improved documentation considerably and an illustrated user's manual
is now
available. You may get more information or download a copy from my web site,
on http://www.geocities.com/SiliconValley/2504

as someone making my way into the word of ham radio, i've noticed a common thread betweem the type of people involved in club's,ng's, and even the crowd at hamfest's.
when a conversation is started by a newbie asking a question about anything, the initial question gets lost in the disagreement over a phrase or misquote that some "know - it - all" has to throw in. of course the person, who is asking the the question, gets forgotten about cause the rest of the answer from some person walking by is then debated for the rest of the day.
HMMMM. seems to me that anyone under 55 yrs old is more interested in "knowing more" than the guy next to him, and i find these rocket scientist to be more anoying than helpful.
if everyone was as interested in furthering their "knowledge base" and help the less experienced operators further their's, nobody would have to worry about the loss of ham bands to others.

to prove my point, i ask all of you to scan the postings of this group and see how many legit questions asking for help or opinions on equipment are responded to.
then look at all the general comments and debates posted with their responces.
in one day i saw a ratio of 10:1 in favor of the debates.

IN THE 1960'S JFK SAID " ASK NOT WHAT YOUR COUNTRY CAN DO FOR YOU, ASK WHAT YOU CAN DO FOR YOUR COUNTRY"

i'm 34, never learned that quote from school, but i practice it every day. anyone else care to give it a try. we just might save ham radio for our children

The Sun won't nova. It's too small. You have to start with 1.4 solar masses to get a nova, and a bit over 2 solar masses to get a supernova. After the Sun exhausts its hydrogen via the carbon cycle, it will shrink. That gravitational potential energy turned to kinetic energy will heat its core to the point that it starts burning the heavier elements via other reaction chains. That causes it to heat up more, so it must expand to the Red Giant phase. But as those elements are (rather rapidly in cosmic terms) exhausted toward iron, its energy will wan, and it will shrink down again, this time to white dwarf stage as it expends its final gravitational energy surplus. Eventually, it will cool to a dead cinder.

If it were more massive, the Sun would end up as a neutron star or a black hole depending on how much mass was ejected during the nova or supernova blast. But it isn't massive enough to light those reaction chains off, so it will just cool to a cinder. Stars which are massive enough will drive reaction chains which produce the elements heavier than iron. This is an endothermic reaction which very rapidly cools the core. The star then collapses very rapidly, in a matter of seconds or hours, and lights the final nova reaction which expels much of this material into the universe. That's how we get elements heavier than iron.

The Sun is a fusion reactor whose containment is gravity. To get the nova or supernova reactions, the solar material has to be more tightly contained than solar gravity can contain it. The energetics of all this is well understood. It

was first worked out in the 1920s, and nothing we've learned since has altered the calculation.

Well, Tom, unfortunately that's what you get when you lower standards.

Standards are designed to filter out unwanted flotsam. By eliminating
the code test for VHF privileges (and replacing it with nothing else)
the No-Code Agenda was successful in converting the VHF frequencies,
specifically, the 2 meter band, to a Family Radio Service. Now, any
numbskull capable of committing test answers to short-term memory
(and that's exactly what they do, as is evidenced by the huge number
of technical questions about the most basic concepts I hear) has a
VHF-only license.

Cec wrote: "IMO, a tech+ is approx. 1/3 the effort of an advanced
license and yet they are not rewarded with 1/3 of the HF privileges..."

I'm not sure how you measure "effort" objectively, so let's look at the
cold, hard facts: The Advanced-class licensee has 130.575 MHz of spectrum
(up through the 33cm band), while the Tech+ licensee has 127.600 MHz of
that spectrum. Thus, the Tech+ is awarded over 97% of what's available
to the Advanced. Not bad if your "1/3 of the effort" measure is at all
accurate.

If I were a Tech+, I'd be *very* happy having that 50 kHz on 80m, 50 kHz
on 40m, 100 kHz on 15m, 400 kHz on 10m, and *all* V/UHF in which to
play. 127.6 MHz. We've been very generous to such such license-holders.

A happy, healthy, and prosperous new year to you Cecil,
Jeff KH2 PZ / 7

>equal a bandwidth of 20 Hz, 40 wpm = 40 Hz?????? thanks for your
>answer/response.

No. Bandwidth has nothing to do with it. The figures above are for the speed of the master clock of a keyer for 5 letter cipher text groups. The occupied bandwidth of the signal is a completely different thing.

Using OOK, which is double sideband AM modulation, the dominant factor determining occupied bandwidth at Morse speeds below 60 WPM is the required rise/fall shaping of the modulating pulses. This sets the occupied bandwidth to a minimum of 66.66 Hz when the CCIR recomended shaping is followed *for any Morse speed below 60 WPM*.

The spectrums of the sidebands for the basic rate symbols are narrower than this, with dot and intracharacter space sideband spectrums being the widest, the dash and intercharacter space spectrums being three times narrower than the dot spectrum, and the interword space spectrum being 7 times narrower than the dot spectrum. It is a complex waveform with no single spectral width. That's why you can't form a matched filter for OOK Morse. The symbols aren't of uniform length, and thus don't form a single line spectrum. That costs you about 9 db in demodulation ability compared to a uniform fully voiced coding.

Hello everybody,
I own a Kenwood TS-940S, today I tried to use, I can listen over all
the frequencies, but no way to transmit. The only strange thing is when
I try to switch in CW the lamp "on air" becomes red, but nothing more.
It is not possible to use the A.T. feature, too. Any idea or it is best
to go the technician??
Thank you for an answer.

change, given the ARRL/FCC concrete mindset

This is because the FCC incorrectly assumes that the ARRL represents the majority opinion of amateur radio operators. Impossible, since the percentage of licensed amateurs with ARRL affiliation is nowhere near 50%...and is dropping rapidly.

It's simple. Get another ISP that allows newsreaders that are not
braindead, and just killfile or "Ignore" anything that doesn't
interest you. Some readers even kill crossposted dupes so you don't
have to read a message multiple times. Forte Agent and Anawave
Gravity are two of the more popular newsreaders, and are available at
very modest prices.

If you're going to stick with a lame provider such as AOL, I guess
you'll just have to learn to manually skip stuff that doesn't interest
you.

> everything
>(well, not everything. I skip anything from Carl! How does such a high-powered,

Don't know, don't care. He has the right to post whatever and however
he wishes, and we have the right not to read it if we choose. Great
system, isn't it?

>Kï¿½MB
>Do, or Don't Do. Never "Try"

Exactly. Don't whine if you can't do either, however.

IMO, eliminating the Morse code exam would result in higher standards in the ARS. They could hardly be any lower presently. Witness extras who don't know how to build a halfwave dipole. Where's the technical beef today? Certainly not in the welfare state subsidized fluff that are the Morse code exams.

>My Microwave oven operates on 2450 Mhz 545 Watts.
>

One more comment that is often overlooked - your typical microwave oven already leaks about 1/2 to 1 watt of RF around all six sides. The general public seems comfortable with the use of microwave ovens for the last two decades, in spite of their leakage (which used to be worse).

19 Set Net Report -- December 1997
By Dave Lawrence, VA3ORP
email va3orp@kos.net

INTRODUCTION

1. The monthly 19 Set Net was held at its regular time of 2000Z on 3760 KHz (LSB) on 7 Dec 97 (first Sunday of the month). There were 13 check-ins (VA3ORP-Dave, VE3ORP-Ron, VE3DPC-Frank, VE3RIH-Alan, VE3CBK-Chris, VE3FYR-Fred, VE3POS-John, W1NU-Vic, VE3NKK-Dave, WF2U-Meir, VE3CFY-Bill, VE3AZA-Chuck, VE3FKQ-Frank).

DISCUSSION

2. Correspondence/Visits. There have been a number of EMail messages between VA3ORP and IK0MOZ reference a trans-Atlantic 19 Set sked. Details below.

3. Previous Events.

a. 11 Nov - The Remembrance Day sked organized by VE1NU-Reed, was very successful. Six contacts were made with the furthest station being VE3BDB-Bob in Orillia. Unfortunately Reed was using a modern set to receive so his contact with VE3BDB (who was using a 19 Set for Tx and RX), cannot count towards the longest 19 Set QSO recognition.

b. 16 Nov - The Ottawa Militaria Show had little communications equipment on display - only a
Type D Mk V field phone. It was a good opportunity for VE3CBK, VE3ORP & VA3ORP to have
an eyeball QSO.

4. Upcoming Events.

a. 13, 20 & 27 Dec - Trans-Atlantic Sked. This is being organized between the "19 Set Group" and the Italian "Army

rig Operators Club"s. Procedures will be as outlined in
"PROCEDURES - 19 SET GROUP - CW NET (ver 2.2, 11 Sep 97)".
Additional details are as follows:
Time/Freq: 0500-0530Z on 7005 KHz
0530-0600Z on 3705 KHz
Net Control: VA3ORP (Dave, 20 Km NE of Kingston)
Mode: A1 (CW) at 12 WPM
North American stations will be called in beginning at
0445Z. Trans-Atlantic work to start at 0500Z. Net Control
Station will be using modern equipment with 100 watts and
both vertical and horizontal antennae available. NOTE: THIS
IS A DIRECTED NET! Participating station to be on time and
on frequency. Priority will be given to 19 Sets as the
objective of this sked is to complete a trans-atlantic 19
Set/19 Set QSO. Propagation should be good for the 13th and
27th but is forecast to be very noisy on the 20th.

b. 17 Dec - There will be a small display of vintage
computers at the Military Communications and
Electronics Museum. This is in conjunction with a
commercial display. Hard to think of 20 year old gear
as being vintage! (do you remember CP/M? - it was BD;
that is - Before DOS)

5. Members' Activities

a. VA3ORP/VE3RCS. The 19 Set in the Museum is now
operational and available for use on Thursdays. The
Thursday sked amongst VE3RCS, VE3RIH & VE3FYR has been
named the "Old Sweats Net". Any military folks are welcome
to drop in at 1000 EST, 3760 KHz (alternate 7060 KHz). Some
additional information was found concerning the
"Alexanderson Alternator" (see the HMCS Haida web page link below)

b. VE3ORP. Waiting for the fleamarket season to start up
again. Some old gear is showing up on Sunday Night Swap Net
(details of an AR-88 passed to WF2U). Had some details
concerning a REALLY BIG antenna problem (Omega antenna in
Hawaii).

c. VE3DPC. Frank has a Command Set (both tx & rx) in good
condition but needs some tubes for the receiver.

d. VE3RIH. Alan continues to do a lot of operating with
his 19 Set. Claims to be the only "authentic" set on the
air as he runs off of battery and dynamotor! (bet his
sulfuric acid isn't 50 years old!) Alan is available for
all three trans-Atlantic skeds.

e. VE3CBK. Chris is available for all three trans-Atlantic skeds.

f. VE3FYR. Enjoys listening to the comments about the
vintage sets. The closest Fred actually got to military

radios was the PTT switch in a Hurricane fighter during WWII.

g. VE3POS. Relayed the story of his first purchase of a 19 Set from Hercules Sales in Toronto for $48 (THAT was some time ago!)

h. W1NU. Vic gave a run down on the modifications that he has done to his 19 Set over the years. He checked his log book and confirmed that he has been using that set since 1947 when he bought it, in new condition, for $1.00. Vic is available for all three trans-Atlantic skeds. (LATE ENTRY: On 8 Dec 97, Vic worked a station in Denmark on 80 M using his 19 Set! Well done Vic).

i. VE3NKK. Dave needs some info on the W.S. No. 29 "B Set". VA3ORP will check the Museum archive.

j. WF2U. Meir got another 19 Set in very good condition and with most of the accessories. He will try to have it on the air for the 8 Dec 97 CW Net (how much was the shipping from British Columbia?) Still looking for information on the RCAF AT-12 (will send photo to VA3ORP).

k. VE3CFY. Greetings from Bill. Glad to hear you on the CW net from time-to-time.

l. VE3AZA. Had some interesting comments about using a spark transmitter at King Edward Collegiate (Vancouver?) in 1939. May check-in to the CW net with one of his 6L6 home brew transmitters.

k. VE3FKQ. Hopes to get to the Museum for a tour of the back room. Maybe Frank can help identify some of the foreign military sets.

6. Ongoing Projects:

a. 19 Set Web Page. This just keeps getting better! Great work by VE3BDB - Bob. Lots of check-ins from all over the world. Some "Wants" and "For Sale" items listed.

b. CW Net. Going well and the training seems to be paying off. Participants are asked to use their dummy load for frequency spotting or, better yet, zero beat using the proper procedure! (set to "R/T", "Net" switch ON, adjust for zero beat, return to "W/T"). As propagation changes it may be necessary to move to the "blue" frequency (7033 KHz).

ADJOURNMENT

7. The net adjourned at 2157Z. QRX Sunday, 4th January 1998 at 2000Z on 3760 KHz (alternate frequency 7060 KHz).

73 es cul de Dave, VA3ORP@VE3CDY.#EON.ON.CAN.NA
(EMail va3orp@kos.net)

...chirp chirp

Monthly 19 Set Net

Join us on regular lower sideband at 2000Z on 3760 KHz (+/-) on the first Sunday of each
month to chat about 19s and other older military radio gear. Control station: VA3ORP

Weekly 19 Set Net

Each Monday night, 2330Z (1930 EDST) on 3703 KHz, CW operation. Fun stuff. You don't
need a 19 Set to participate but you may hear the distinctive "warbling chirp". Note: this a
directed net and the control station directs ALL activity; CW speed is to be kept at 10
WPM with correct spacing; if using a 19 Set, please re-tune often in order to stay on
frequency (digital receiver for side tone and frequency control essential). Control station
VA3ORP.

Watch Amateur Radio Packet for messages to "19_Set" after each monthly net!

Events Involving 19 Sets

Sep 4-7, 98 (repeat 1998) - Reunion 98 at CFB Kingston, Ont.

If you know of any events featuring the 19, please let us know!

[1062]

CLOSED CIRCUIT ADVISORY

Newsline Report number 1062, for release on Friday, December 19th, 1997 to follow.

<*>

The following is a QST

Only a week left to comment on changing handicapped ham radio testing and the towers come falling down. These stories and more on Newsline report number 1062 coming your way right now!

<*>

Comments Due On FCC Petition

If you are for or against tightening the rules regarding the way handicapped applicants are tested for Amateur Radio licenses, you have only a week and a half to make your voice heard. This is because comments are due December 29 on the ARRL's petition to change the way Morse code exam exemptions for severely handicapped applicants are handled by the FCC.

The League wants to change the procedural requirements in Part 97 that must be met, prior to granting handicapped CW wavered examination credit. The society has proposed that a candidate would at least have to attempt taking a Morse code test. This would be a test administered with any and all necessary accommodations before being granted an exam waiver based on a physician's certification.

Also, Volunteer Examiner Coordinators would be entitled to request medical information pertinent to an applicant's handicap from the certifying physician. VEC's would also be required to have this information on file before the application is forwarded to the FCC for processing.

Again, the commentary cutoff date is December 29th. The FCC has designated the petition as RM-9196. Comments should be sent to the:

Secretary
Federal Communications Commission
1919 M St. North West
Washington, DC 20554

(Via ARRL)

<*>

Vanity Gate 4

Don't look for the FCC to process any Gate 4 vanity calls until early next year. According to the commission, the current plan is to run the first day applications on or about January 7, 1998. The FCC adds that this is only a guess and is far from a firm start-up date.

(Via FCC)

<*>

No More Navy Fax Transmissions

The Navy's High Frequency facsimile broadcasts are going away on New Years Day. These broadcasts were started many years ago and were originally intended to support U.S. Naval operations in the Atlantic Theater. But in recent years all fleet units have migrated to other high tech communication systems. As a result, the Commander in Chief of the U.S. Atlantic Fleet has determined that the Navy High Frequency Fleet Facsimile Broadcast will cease its 24 hour continuous broadcast operations.

But its not completely over for Navy Fax. Instead, the mode will be placed in a back-up mode for on demand service. This, to be activated by fleet units upon request.

(Via US Navy press release)

<*>

VOA Towers Come Down In Ohio

It's the end of a period of glory for a famed Voice of America transmitter station.

The end of an era came on Tuesday, December 2nd 1997. The final steps were taken in the Voice of America's Bethany Relay station site tower demolition. The supports for the two end 300 foot towers were cut and the weight of the antenna wires still attached dragged them to the ground. Only the center tower remained to be pulled over by a bulldozer.

Numerous other smaller towers around the site were disassembled and stacked for sale. The site is to be turned into ball fields, a commercial development, a golf course, and a facility for Miami University.

The few parts of the site to be preserved include the switch matrix made of telephone poles and the largest knife switches I've ever seen. And possibly the dummy load building as part of a historical exhibit.

The is a bit of an irony of this story. The owner of the company that contracted the final demolition did not have far to go to work that day. According to KA8OQF that expert lives just across the road from the now demolished VOA Bethany, Ohio transmitter facility.

(Via Amateur News Weekly)

<*>

Amateur Named Chief FCC Technologist

A ham has been named as the FCC's new Chief Technologist. Chairman William E. Kennard has announced that Dale N. Hatfield, W0IFO, has joined the Commission as Chief Technologist based in the Office of Plans and Policy.

The Commission is not a new place of employment to Dale Hatfield. He returns to it and government service after a fifteen year break during which he founded and operated a telecommunications consulting business based in Boulder, Colorado.

(Via FCC press release)

<*>

Alleged Airwave Auction Fraud

Federal Regulators have accused a Mississippi wireless communications company of breaking rules aimed at preventing bid rigging in government airwave auctions. They have also proposed the imposition of a $650,000 fine on the firm.

The Federal Communications Commission is accusing the company of engaging in bid signaling. Signaling is an illegal practice where a bidder ups a bid by an unusual amount to signal its intentions to other participants.

The Federal Communications Commission charges are the first to stem from government probe into possible bid rigging at recent auctions for advanced wireless phone licenses. Attorneys for both the FCC and the Department of Justice say the move could be a forecast charges against other wireless companies as well.

(Via FCC press release)

<*>

FCC Bans All Radar Jammers

The Federal Communications Commission says that all traffic radar jamming devices are illegal. This includes the so-called passive reflector types as well as those which generate jamming signals by themselves.

The ruling comes as the FCC tells a Texas company that one of its radar jammers is illegal. And in upholding a previous order against Rocky Mountain Radar, the Commission says that its decision applies to any manufacturer of similar radar jamming devices. Devices that the FCC says adversely affect the ability of law enforcement officials to protect public safety on the highways.

Rocky Mountain Radar argued that the FCC has no regulatory authority over its product because it does not generate, emit or work on radio signals. The FCC disagrees. It says that the device captures an radio frequency signal and then generates and emits a different RF signal. As far as the FCC is concerned, that makes it a transmitter and the regulatory agency says it has the right to ban their sale.

(Via FCC press release)

<*>

Brewer Coming Back Via The Internet

Doug Brewer, KC4HAZ, better known as Tampa Florida's Party Pirate says he is making a comeback, but not with his own transmitter.

Tampa Bays Party Pirate is coming back on the air, actually on the net. Doug Brewer, KC4HAZ, handcuffed and held at gun point while U.S. Marshals and FCC Field Engineers seized thousands of dollars worth of radio equipment from his home near Tampa last month now says he is putting his pirate station on the internet.

Brewer adds that he hopes other people with unlicensed transmitters will put his programing back on the FM band by tapping the internet.

"We're going to call this thing Party Pirate Radio Network" Brewer says. He adds that the internet programing is totally 100% legal, because the FCC has absolutely no jurisdiction on the internet.

KC4HAZ's commitment to the micro broadcasting movement is underscored by the fact he has recently sold his radio shop, once a Mecca to radio amateurs across the Tampa Bay area. KC4HAZ's wide coverage amateur repeater network, however is still on the air.

Brewer, who faces no criminal charges is also pursuing legal action against the FCC in hopes of recovering nearly $10,000 worth of equipment and cd's seized in the November 19th raid.

Meanwhile Art Cobris, K4FWJ, has been released on bail after his arrest on felony charges during the same Tampa Bay area pirate radio raid. Cobris faces prison on a 14 count Federal indictment after he replaced his unlicensed FM transmitter following seizure of his station in 1996. It is not known if Cobris will seek to continue his anti-government patriot broadcast on the internet or elsewhere.

Two other Tampa Bay area pirate stations were recently forced off the air, do not apparently have any amateur radio connections.

(Via Newsline)

<*>

N6NHG Lawyer Responds To Hackers

A lawyer for convicted computer hacker Kevin David Mitnick, N6NHG, says his client does not endorse threats placed on the Internet. Threats that warn of a computer virus that might be unleashed unless the famed hacker is freed from prison.

But in a statement placed on the official Mitnick website two weeks ago, Attorney Donald C. Randolph stops short of condemning the actions by a self professed computer hacking group calling itself Pants Hagis. In his message, Randolph said that Mitnick appreciates the concern of the Pants Hagis alliance for his current condition of incarceration. But Randolph adds that Mitnick does not endorse causing harm to any computer users on his behalf.

subscribe greenkeys.

(Via e-mail)

<*>

Middle School Ham Radio Program

The Hale Middle School in Woodland Hills, California has became the first public school in California to offer Ham Radio as part of the regular curriculum. The first semester class is being taught by Bob Lavin, K6BOB who also operates the Foursquare Radio Amateur Youth club in the city of Oxnard.

In Woodland Hills, Lavin has the full support of the school's administration and the Parent, Teacher, Student Association. The Association even donated $3,000. This, to support the new class as well as helping to equip an emergency communications center for the school.

And there's more. In 1998 the school plans on adding more classes and an on campus radio club as well. Lavin says that he hopes to eventually have five classes going each semester until he can get all the kids licensed.

(Via Newsline, K6BOB)

<*>

International Space Station Crew To Include Hams

Hams will be among the first crew members to live and work aboard the International Space Station. The first crew will consist of U.S. astronaut William M. Shepherd, as the expedition commander. Shepherd is studying for his ticket. He'll be accompanied by Russian cosmonauts Yuri Gidzenko and Sergei Krikalev, U5MIR.

The second crew will be headed by Russian cosmonaut Yuri Usachev, R3MIR, and will include U.S. astronaut Susan Helms, KC7NHZ. U.S. astronaut Carl Walz, KC5TIE will be a member of the forth crew to head to ISS.

Initially, crews will inhabit the service module, which will include a ham radio antenna. Ham gear will be delivered aboard STS-96 late next year. NASA now says that it will not have the International Space Station fully assembled and operational until the year 2003.

(Via ARRL)

<*>

MIR TNC

Mir has a new packet TNC. According to Dave Lasen, N6CO, the new TNC delivered by the MIREX group to the Russian space station is a Kam dual mode unit. Larsen says that it will connect at either 1200 or 9600 baud and has 100 kilobytes of memory. At this time the cables for 9600 baud are not made up so 9600 and 1200 can not be ran at the same time.

(Via N6CO, AMSAT-BBS)

<*>

KC5VP: More Time On MIR

And NASA has delayed next month's space shuttle flight to Mir, leaving American astronaut David Wolf, KC5VPF, aboard the space station for at least another few days. The shuttle Endeavour was supposed to blast off January 15, but NASA announced December 8 that January 20 will be the new launch date. During the January mission, the Endeavour will pick up Wolf and drop off his replacement, Andy Thomas, KD5CHF. Thomas will be the last U.S. astronaut to live aboard Mir.

(Via ARRL)

<*>

INT

On the international scene, Radio Amateurs of Canada reports that its English Language Bulletins now have 1000 subscribers. That's up from 275 readers, only a year go.

(Via RAC)

Following the Canadian Parliament's passage of legislation ending Canada's postal strike, the United States Postal Service announced today that it has restored all mail service to Canada. All classes of air and surface mail to Canada are now being accepted at post offices. That means its once again safe to ship your QSL cards to VE stations and to the Canadian QSL bureau.

(Via USPS)

Hams in the United Kingdom are looking forward to another new very low frequency band. The Radiocommunications Agency has told the Radio Society of Great Britain that it hopes to release the 136 kHz band to all U.K. Class A licensees early in 1998. Like the 73 kHz band opened in there last year the new allocation will be a sliver sized allocation. In fact, at only 2.1 kHz total bandwidth it will be slightly smaller than the 2.8 kHz available at 73 kHz. The RSGB says the band likely run from 135.7 to 137.8 kHz.

(Via RSGB, GB2RS)

<*>

DX

In DX, if you worked 1X5AA in Chechnya don't go running off to claim DXCC credit for it. This is because the 1X5 prefix is an unofficial one that does not have international recognition and is therefore not valid for DXCC accreditation. At least, not at this time.

(Via ARRL)

On the air, SP3BGD, will be the new operator of the Polish Antarctic station in the South Shethlands. The station he will operate uses the callsign HF0POL and is located on King George Island. He will be active from January 1st through December 31st, 1998. QSL via SP3SUN

(Via e-mail)

<*>

Christmas Messages

And finally, as the holiday season draws near, a club in the Indianapolis, Indiana Area is doing its part to bring Christmas cheer to some elderly citizens.

This Christmas may be a little brighter from Masonic Home residents in Franklin, Indiana thanks to members of the Mid State Amateur Radio Club. Christmas greetings will be collected and transmitted via amateur radio to locations around the world.

According to one elderly resident, This is a great program. She says the only time she hears from her family is after she sends them a holiday message through the hams. Most of the messages are passed via the regular cw traffic nets.

The Mid State Amateur Radio club has been collecting and transmitting Seasons Greetings from the Masonic home for the past thirteen years.

(Via Amateur News Weekly)

>half of the 700,000 don't even have a station and radio never enters their
>thoughts. Of the truly active hams, the vast majority are ARRL members.

And how did you arrive at that conclusion? It doesn't jibe with my experience. I asked the fellows who hang out on our repeater how many were ARRL members. There were exactly three (counting me) out of the whole group who said that they were. And that's out of a group of a couple dozen very active amateurs. Most are under 50, however.

The last time I spoke at one of the local clubs, I asked the same question. And out of a roomful of members of an ARRL Special Service Club, less than half those present raised their hands. (And to be a Special Service Club, at least 50% of the members have to belong to the ARRL, so it would seem it is the ARRL members who aren't even active enough to show up to a club meeting.)

When I asked who in the group were Dxers or contesters, most who raised their hands were from the ARRL group. But when I asked who did public service, the non-ARRL group was a slight majority (and this has been ARRL's Year of Public Service). And when I asked for a show of hands for those active in technical experimentation, disproportionately few ARRL members raised their hands. (That was interesting in itself because the program I was going to present was billed in advance as a technical one. I expect the ARRL members who showed up did so more out of habit than to hear what I had to say.) I didn't ask for a show of hands for an age breakdown, but it was easy to see that grey heads predominated among the ARRL group.

I routinely ask these sorts of questions when I'm asked to speak to a club, and the responses of this group were fairly typical of what I've gotten at other club meetings over the last few years. If the majority of active amateurs are ARRL members, they don't show up at club meetings to hear my talks or hang out on the repeaters that I frequent. Maybe they're all home pounding brass, or maybe they couldn't get a ride from the senior center. I don't know. But it seems strange that it would be supposedly inactive amateurs who would show up to club meetings or be heard regularly on the repeaters while the supposedly active ARRL members are notably absent.

There is no doubt that out of the 700,000+ currently licensed US amateurs, some are silent keys who haven't been purged from the roles. And some may be inactive. But I don't believe over two thirds of the people who have

bothered to get and keep an amateur license are in those categories. And of the active amateurs I see and talk to on the air, I haven't found that a majority are ARRL members. It may be true among contesters and Dxers, because the ARRL runs the contests and handles the Dx awards, but they aren't the majority of amateurs, even though it may appear to be so on some weekends. (Less than 5,000 applied for, or updated, their DXCC status in all of 1996.)

6117. No Code

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-27 00:00:00 UTC
From: Ed Legenza <atued@earthlink.net>
Message-ID: <34A53D84.6F9D@earthlink.net>
Source record: 183328

I usually don't get into the fracus of "debate."

However, it is sickening to continually hear about "no Code" this and do away with the code that.

The amateur community has allowed no code licensing, yes it only allows vhf and above privelages. But to get HF access requires ONLY 5wpm.

Darn you winers, you could barely know the code and pass a 5 wpm exam.

Someone else said in their response that there is the incorrect impression that HAM radio is dying and will go quicker if we don't do away with the code and allow a flood of new blood in.

Well, ham radio is indeed not about warm bodies, but knowlegable people who like to experiment with radio and communicate in a usefull manner. Not to mention our responsibility to furnish emergency communication. You know, code is the best, yes BEST BEST BEST, way of getting through to someone when the atmospheric conditions are the pitts. Maybee that is why the ITU hangs on to it!

This is NOT just a hobby, it is a responsibility to support emergency communications when called upon.

REally, if you want a license as much as people bitch, I for one will volunteer to help anyone in the East Bay area of California study and learn the code.

I did it with a lady who is disabled and has a learning disability...it can be done!!

No fire away...I have had my two cents worth!

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc

I see I made an error in explaining the frequency setting
command of the PCR-1000. The correction version of the full command
list will have this corrected, but here's the deal.

I left out the trailing '00' on the command. This is
obviously a parameter of some kind, but I'm not sure what it does.
The control software always seems to send a '00' here, and that works.
I haven't tried other values to see what the impact might be.

Thanks to the folks who found this who tried it, found it
didn't work, and asked me why.

Frequency K0fffffffffmmFFXX
fffffffff is frequency
mm is mode
00 = LSB
01 = USB
02 = AM
03 = CW
04 = (possible RTTY? Nothing sets this value)
05 = NFM
06 = WFM
FF is filter
00 = 3K
01 = 6K
02 = 15K
03 = 50K
04 = 230K
XX is an unknown function but is always '00'
00 = ?

I am looking to buy a friend a weather radio, need help finding one. I've heard there are radios which will continually monitor NOAA frequencies and then turn on the audio when NOAA broadcasts the 1000Hz emergency tone.

Can anyone direct me to a brand and model and perhaps where it can be bought?

Thanks,
Vic

Radio Shack has several models available. The newest decodes the
digtal data and displays the message for the county code you preset.
It's about $80 as I recall. Other models go for as little as about $25
on sale.

Simple! Radio Shack. They have a bunch.

"Alert" models start at $30.

If you live in an area with frequent alerts, you may wish to
consider the top-end model with the "SAME" alert feature. "SAME"
is a digital code that is broadcast so that you will only hear
alerts for your area.

Look on page 229 of the `98 catalog, or take a browse to:

http://support.tandy.com/support_audio/3152.htm

Read about the weather radio system directly from the "horses"
mouth:

At the least the ARRL could do like they do with elections for some
judges, and let us vote on whether or not to retain an unopposed
official. None Of The Above is another ballot option.

What really steams me is that when an SM runs unopposed, we don't even
GET A BALLOT! The person is just "declared elected," even though
there has not even been a facade of a real election. After a few
times, I'd guess the members tend to forget that there even is an
election process for SM. For instance, I've been an ARRL member for
nearly 20 years, and I've never even _seen_ a ballot for SM, since
there's never been a real election in Idaho. This is not a healthy
situation, IMO.

>in getting involved? I've run for public office 4 times and

The qualification process to run for ARRL office is more complicated
than necessary, too.

>Darn you winers, you could barely know the code and pass a 5 wpm exam.

True, but that's not the point. The reason the code requirement should be
eliminated is because it no longer serves any useful purpose, relevant to
obtaining an amateur radio license as issued by the United States Government.
Furthermore, the continued insistence on this outdated and unnecessary
requirement is turning away would-be new operators which the hobby desperately
needs to attract in order to survive with the current frequency allocations
intact.

Witness the large numbers of licensed amateurs who HAVE passed Morse code
tests, but nonetheless are opposed to continued CW requirements because of the
reasons explained above.

Trying to hit someone in the wallet You ought to consider the ARRL

If You are members of ARRL cancel Your membership, because THEY did not
think of it first. What are they think when it comes to the hoby? only
contests so they can bring in subscribers?
Suposetly they look after the hoby, and protect it, while they help the
members.

Thinks like helpfull features for the blind operator, and standards like compatable microphone plugs is the business of the league, don't forget these radios some day might have to be used in an emergency.

This is true, but only to a point. I passed the 5wpm, but what does it get me? CW ONLY on a few bands, and phone, at. al., on the often useless 10-meter band. Why even BUY or bother to build a radio to work a mode I have no interest in using?

>This is NOT just a hobby, it is a responsibility to support emergency
>communications when called upon.

Many of us do, but what has this to do with CW -- CW in NOT part of any emergency communications plan. Not knowing it does nothing to disqualify a ham from helping out with emergency communications.

Actually, it's not the responsibility of the league.

The league has virtually no sway over the manufacturers -
the amateur community, who BUYS their radios - does.

Groups like Courage Handi-Hams do a very impressive service
with limited resources.

Dale,

Near the front of each QST is a page called: Get to Know your Section Manager. In the Sept. '97 issue (the issue that came to hand first) it's on page 12.

Look down the list until you find your Division (for Idaho it's the Northwestern Division), then look for your state. Next to the state you'll find a listing for your SM. Unless it's changed since Sept. '97, it's Mr. Mike Langrell, AA7VR. Among other info it list's his email address as: aa7vr@arrl.org

Try asking him your question.

You can also get some info from the section of the magazine called "Section News"(starting on page 121 of the Sept issue. The Northwestern Division info starts on page 144 of that issue). Your Section Traffic Manager is W7GHT. Perhaps you can get the email address for W7GHT from your SM. The STM will have all the info you desire regards the NTS in your section.

Hope this helped,

73,

Mark

Code is now a "politically-motivated" requirement? That's a new one.

>At some point, they will rise up and act against the establishment.

What will happen? Mass attacks against FCC personnel? More fertilizer
bombs at FCC listening stations? Did the Michigan Militia recently form
an anti-FCC faction?

>This is exactly what is happening now in amateur
>radio. Witness the large increase in the number of outbanders in general, and
>especially those who operate past 28Mhz.

Freebanders have been around since, oh, long before I was a ham and before
I was interested in radio back in the '70's. "Large increase"? I doubt it.
At least, not in the US. Maybe outside the US, where zero enforcement and
cheap radios gives rise to people and businesses (like taxi services) using
otherwise amateur frequencies for personal communication.

>These are, for the most part, serious
>radio enthusiasts who would gladly obtain an amateur license if the testing

Semantics, Les. The tests are present to (supposedly) ensure your technical
competence. That technical competence is the 'standard' the FCC, representing
the amateur public, is seeking to maintain.

>Overall, I have met better operators on VHF than on HF. I have heard things on
>20 and 75 mtrs that I thought were to be found only on 11 mtrs.

Not surprising at all. All it takes is one drunk redneck from Kentucky
with his Alpha 87 on 75 meters to demonstrate to the entire US what a moron
he is. On the other hand, it would take a small army of VHF operators to
accomplish the same thing on 2 meters.

Les, you hit the nail right on the head. And peronally I would be in
favor of lowering the code requirement for all HF bands to 5 wpm, but
maintaining the "theory" requirements for general, advanced, and extra
band priveliges!

Maybee we will see the requirement lowered to 5 wpm and the bitching
stop!

Dear Larry,

Most hams here (or prospective hams) have the mistaken idea that
emergency communications involves FM 2 meter or 440 mhz work alone.
Indeed in bad emergencies, such as the 1989 Loma Prieta earthquake
around the S.F. bay area, HF communications was the only way to know
what was going on in Santa Cruz.

To be honest, at that point we used SSB. But had the conditions been
unfavorable to SSB then CW could have been used.

Any ham who has worked both SSB and CW will tell you that when
conditions get rotten, CW will often work best when no other mode can

overcome the atmospheric conditions/interference.

MAybe you should keep up with the facts. First off CW is digital, the
first digital mode ever! There have been devices for quite some time
which can both send and received CW automatically. However, experience

has proven that a trained operator can read signals that computer based systems are stymied by.

Second, CW can and is used in emergencies where no other mode such as AM, Fm, or SSB can suffice.

Third, Ham radio has nothing to do with commercial shipping or aircraft! If that is your goal becoma a sailor or a pilot!

I don't think 40 meters is even remotely useable for cell phones. The
whole idea of cells is that they are short range transmitters grouped
together in a grid to cover a geographical area.

40 meters would require too large an antenna, and go too far!

The thing that amazes me is that anyone would want to demonstrate their ignorance of such a
basic knowledge for the world to read. All Mr. Slime has to do is to go to his (or her) local
library, obtain a copy of The Amateur Radio Handbook (it doesn't matter how old the copy;
the formula for calculation of a dipole antenna is nearly as old as radio itself), and look it up.
Undoubtedly, considering that Slime may not have easy access to a library, but does obviously
have access to the Internet, there are many sites that also offer that information. All one
needs to do is learn how to use the various search engines to get the information. That would
surely relieve him/her of the necessity of embarrassing him/herself on a public forum.

The IKEA post made me think this would be a great thread. I remember getting a real kick out of the Joe Walsh, aka WB6ACU, Barnstormer album. In one of the songs an organ is keyed at about 5 wpm and he sends the message "Register and Vote" unless your listening for it you'd never know it's there.

What other songs, TV commericals, Television shows etc. have you heard CW sent where a real message is copyable?

For Sale or Trade:

I have a 5 position antenna switch, B&W, Model 550-A, plus two B&W coils that I bought years ago when I experimented with amplifier building and antenna experimenting. I don't know the coils numbers any more, but, here are the coils stats:

1. 55 turns of .062" diameter wire with .062" spacing betweent he coils on 3" diameter and 7 inches long.

2. 38 turns of .080" diameter copper wire, .170" distence between the coils, on a 3" diameter and 9.5n inches long. This coil has a ceramic, non shorting, 16 position switch, (rated at kw),that is wired to every 2nd coil. I used it to tune a vertical I was experimenting with.

Make an offer or trade. Contact me via E-mail: w3ivg@prolog.net

Small + handy program, Address, can fill, read, and organise a
database. You can use it for any topics such as books, customers,
music, car, cd, parts, clients, etc... and makes as many different
databases as you like.
The extended search possibility of the program makes it suitable for
any application where many items need to be ordained and found in a
few seconds.
This program gives you the way to manage your collection of items
whatever their topic. This without the complication of big database
programs. You can start without any specific knowledge on the subject.
you just need a mouse... and visit:

http://www.xs4all.nl/~bernard

see you there,

You can use a program like Print Master Gold and put the same thing on
each page of a folded card. On each page you would have a front,
back, inside left and an inside right. I use the above program but
I'm sure there are many others.

But having an election with only one candidate is not at
all unusual. The question that should be asked is why is
there only one candidate? Are others just not interested
in getting involved? I've run for public office 4 times and
in one of those times I had no opposition at all. Should
I have not accepted the end result? Should the
working of government not have allowed me to take office
because no one opposed me?

>The ARRL is not a democracy.

No, but we do get to vote for those that choose to run
for office of SM, etc. That's very similar to most other
organizations.

OK, I got bored and decided I needed to write a tutorial on
how to use TRUNKER.EXE. If you've used this program and know anything
about it, *please* take a look at this (remember, it may keep a newbie
out of *your* inbox).

If you want to use this program, read this and see if it makes
any sense. If you still can't figure out what you're doing, figure
out what you're doing, and tell me why it didn't help.

If you have or haven't used this program, but feel you're a
general know-it-all, make sure you know what you're talking about,
then tell me how I should change the tutorial.

If you don't fall into any of the above categories, why are
you reading this message at all, anyway?

- Chris, KD4DTS

How to use this stuff
John "Chris" Wren, KD4DTS
jcwren@atlanta.com
12/26/97
Version 1.00

In looking at the documentation provided with TRUNKER, I've
noticed that it's rather scarce, and there's a lot of implied
knowledge. Perhaps with this document, we can remedy at least a
little of that.

If you are a learned soul, and find some deficencies, or know
a better way to do something, please, e-mail me and I'll incorporate
it into the next version of this document.

What does this thing do?

TRUNKER is program that allows a person with two scanners and
a device called a "data slicer" to follow traffic on a trunked radio
system. It's useful for listening to what the police, fire/EMS teams,
water works, and whatever other groups using the system are up to.
Hear your tax dollars at work ("Unit 54, be advised that complainent
says the neighbors cat has been meowing too loudly. Dispatching 3
additional units, signal 32, TAC 3").

What's a trunking system, how does it work?

Trunking systems seem to be implemented typically at the
county level. Where I live, the system has the county police

department, several city departments, fire/EMS teams, animal control, the water works, Parks & Recreation services, and some various other county level functions.

Each service is assigned to a group. As far as I know, unless there is an equivalent of changing channels, each group can only talk to members of their own group. This prevents the water works guys from yakking at the fire/EMS teams. There are also certain groups that all radios respond to, such as "All county". Through some system, users are able to talk to specific other users, rather than the whole group. I don't know if individuals can talk to individuals outside of their own group or not. I imagine the system is pretty flexible, and can acommodate this somehow.

A trunking system is a radio system that has a minimum of 2 frequencies, and usually more. One channel, at any given time, is a control channel. This channel contains digitally encoded data that specifies which of the other channels in the system currently have conversations on them, which frequency to use next, etc. This data channel often rotates between up to 4 frequencies (used to "normalize" transmitter wear, I guess).

(This part I'm unsure of). For every output frequency the county, there are a corresponding number of input frequencies. Output frequencies are in the 854-858 in my county, and the inputs are somewhere down around 814-818.

When a user keys down, the trunking system controller selects an output channel for that transmission, and repeats what it hears from the input on the output frequency. The control channel notifies other radios that the input frequency is in use, and if they need to transmit, what other input frequency to use.

The above is somewhat simplified, and certainly contains some omissions. Someone who *really* knows about trunked systems should fix this.

What do I need?

To really do this right, you'll need either an AR8000 scanner, or a scanner capable of being controlled by a computer (AR3000, R7000, PCR1000, AR2700, etc), and a radio capable of monitor 800mhz with discrimator out (such as a Yaesu 8100, or many other "packet ready" radios). You'll also need a data slicer.

A data slicer is nothing more than a device that takes the discriminator audio in, amplifies the heck out of it so it looks like a square wave, then converts it to RS-232 levels. You should be able to build one of these in about 1/2 an hour if you're adept with a soldering iron and know which end of a diode is which. There are also some commercial ones from MFJ, WeFax, and a few other manufacturers.

You'll need the computer controlled scanner to listen to the audio on the output frequencies. The other radio listens to the control channel, and the data from the discriminator out goes to the data slicer. The data slicer squares up the signal, and sends it to the PC via the Clear-To-Send pin on the serial port.

The software decodes the data coming in from the data slicer, and commands the computer controlled scanner to change frequency. The software supports a prioritization scheme that allows you, the user, to assign a priority to each group. As an example, I set the "All County" group to be highest, because usually anything sent to the entire county is of some interest. The water works people are set to the lowest, because, frankly, these are some of the dumbest people to ever squeeze a microphone key. My nearest city police are set to the second highest priority, because they're closest to me. If some junkie is running loose with a gun near my house, I want to know about it (how else to justify an Uzi with a silencer and night vision equipment to the wife?).

How do I find the trunking system?

Look for tall towers. No, seriously, there are a couple of excellent websites that contain lists by state and county of what frequencies are used, what groups are assigned to whom, etc. The two I really like are:

http://web2.airmail.net/lblant1/trunked.htm
http://members.aol.com/wwhitby2/trs.html

Another method is tune through the 800 mhz band, starting around 849 megahertz or so. Set the step for 12.5Khz. The problem here is that if you have to resort to searching like this, you're likely not to know what to listen for. A couple of hints: If you have the decoder software running while you're doing this, when you hit the control channel, you'll suddenly see frequencies appearing on the screen, and a SysId come up. A control channel sounds like a surging buzz. It will also stay up continously. If you know what pager data sounds likes, it doesn't sound like that.

Maybe someone will record a few seconds of it and post it as a .WAV file so you can see what you're looking for. This might also be a good way to provide a test setup so you'll have known constants when putting everything together.

What kind of computer do I need?

This is a good question. Experience shows that it runs on an AMD 5x86-133 in a DOS box under Windows-95 without any problem. It also will run but miss data on a 486-25 laptop under DOS only. Other people says that under Windows-3.11, don't even bother. I have an NT system here, but as of 12/26/97, I haven't tried it yet.

The program supports an accuracy counter, expressed in percentage. This indicates with what degree of success it decodes

packets. On the 5x86-133 system, I get 95 to 97% accuracy, with fairly poor reception (major fluctuation between S1 and S3 on my Yaesu 8100, for folks who know what this means).

How do I get the software running?

The software is not complicated to get running, particularly if you know that your hardware is already functional. If you've just built your own slicer, and don't know if it's working or not, well, that's beyond the scope of this document (so far).

The first thing to so is either boot a machine to a DOS prompt, or under Windows-95, open a DOS box. Make it full screen (using the ALT-ENTER key sequence) to make it easier to read, for now.

At the DOS prompt, you'll need to set several environment variables. Don't panic! It isn't voodoo. It's just a easier way for the lazy programmer (that's me) to avoid writing code to parse command line arguments.

Environment variables are nothing more than strings of text stored in an internal area of DOS (for those of us that really know how the variables work, leave it alone. We're trying to get this person running, not teach them DOS internals!). Every time you set a PATH statement (like the one in your AUTOEXEC.BAT), or change your PROMPT string, you're changing an environment variable. See? Nothing to it...

To select the type of scanner you have, at the DOS prompt, type:

SET TRACKSCAN=R7000

Now, if you don't have an R7000, use the type of your scanner here. (You can type TRUNKER ?) to see a list of supported scanners. It's being taught about more all the time). So, if you had a AR8000, you'd type

SET TRACKSCAN=AR8000

You get the idea, I'm sure. Now, you'll need to set a variable to tell the program what COM port you have the scanner connected to (you've connected the scanner, haven't you? If you don't, this will never work. And, if you don't know how to connect your scanner to the serial port, well, post a question to USENET. I can't explain that to you.).

SET TRACKSCANPORT=COM1

If you plugged your scanner into COM2, then substitute COM2 for COM1 in the line above. The same is true for COM3 or COM4 (for those of you who know enough to know what this means: If you're not using an 8250 COM port, or your multiport serial card doesn't emulate

one, it won't work. You have to have an 8250, 16450, or 16550 type COM port).

Now we'll need to tell the program where your data slicer is. Same kind of stuff here.

SET TRACKSLICERPORT=COM2

Again, if this isn't the COM port it's one, use the correct one.

The next variable you'll have to either already know, or perform an experiment to find out the correct value. The audio out of some radios is inverted (you be able to tell this because everything will sound upside down. Heh heh heh. Just kidding! But seriously folks...)

SET TRACKSLICERMODE=NORMAL

At this point, you'll need to tune the radio that you're going to monitor the control channel with to an active control channel. If you don't know what one sounds like, read whatever I wrote near the top on finding out how to figure this out. You should know this by this point in the process).

Start the program by typing:

TRUNKER

If the program comes up and you start seeing a list of frequencies displayed on the screen, and the SysID field in the upper left hand corner has a number other than 1234, you're OK. If not, trying quitting the program (use the 'Q' key), then type:

SET TRACKSLICERMODE=INVERT

This tells the program that your radio/slicer combination is inverting the data, and needs to be set right. Start the program again with:

TRUNKER

Hopefully now you'll start seeing data appear and a SysID number other than 1234 come up in the corner. If it doesn't, you've got a problem that I can't help you with. Post a question to alt.radio.scanner, and ask for help. There's a bunch of great people there, and you'll probably get more replies than you ever expected.

If you saw control channel data appearing, but the scanner you have connected to the serial port isn't changing to the frequency with the asterick beside it, you're halfway there. This indicates your control channel radio/slicer combination is working, but either the monitoring scanner isn't in the correct mode, or the interface to the scanner has a problem.

Check the dumb things first. Many people make the mistake with the AR8000 scanner of having it in CR/LF mode, instead of CR mode. I have no idea how to change this, 'cause I don't own one, but I hear people talking about it all the time.

If you have something like a R7000 or R7100, check the baud rates. The factory default is 1200, but the program defaults to 9600. You can override the default baud rates by typing:

SET TRACKSCANBAUD=1200

If you don't use 1200, you can use 300, 1200, 2400, 4800, 9600, 19200, 38400, or 57600. The R7x00's are tricky, because besides trial and error, the only way to know what they're set to is to open them up and look at the switches.

If you built an interface, try figuring out another way to verify the hardware. No doubt you can find a control program on the 'net that will support whatever radio you have.

If you know the hardware works, make sure you don't have some kind of COM port conflict. Remember that using standard COM port and IRQ mappings, you can't use COM1 and COM3, or COM2 and COM4 at the same time. This is because they share the interrupt, and most (not all) systems are not smart enough to know how to "share" interrupts.

Try just using COM1 and COM2, if you can. That's nice and generic, and very safe. Put the slicer on COM1, the scanner on COM2, and set the environment variables TRACKSCANPORT and TRACKSLICERPORT accordingly. If you can, plug another PC in the serial port the scanner should be connected to, and see if you see any data coming off it. Remember that you'll need a null modem cable to reverse the transmit and receive data lines.

If you've gone through all this, I can't help you. Send e-mail, or post a question to the 'net, describe your symptoms with great care and detail, and wait for a response. Remember, you'll only make people mad if you post the question as "I tried to use TRUNKER and it didn't work. What did I do wrong?". Tell us what you tried, what worked kinda, and what didn't work at all.

All in all

Hope this helped you some. If reading this document got you up and running, let me know (better yet, send money! Just kidding). If this document lacked something obvious that you figured out knowing would have helped, send e-mail. I'll make changes. If you didn't like the document at all, I don't want to hear from you. Write your own document, and one-up me.

Happy trunking!

Webcor Regent Coronet Stereo Tube Model #2380-1 reel to reel. Made in Chicago. Excellent running top-end three speed tube unit from late 1950's or early 60's with extra features. Has separate optional Webcor compact mini-suitcase speakers that fold into little suitcase. Handles 7 inch reels. Has top-end options for its time. Weighs about 38 lbs by itself. No mikes, missing small piece of cover plate on bottom about 2"x 3" for access (Just screw in any plate to cover if you wish), have SAMS photofacts manual for unit. $100 plus UPS Shipping. Will pack it free.

Have photos if you wish me to email them to you. Must see.

Will consider trades all or in part for Civilian or Military tube tester as well -- or guitar or bass amp.

6167. Code Free Access to HF? - Not in Your Lifetime

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-27 00:00:00 UTC
From: N4ST <jprice@crosslink.net>
Message-ID: <6822on$1b1$1@kronos.crosslink.net>
Source record: 183396

Just an opinion, I suppose, but the January 1998 Issue of AUTO-CALL, the "Official Journal of the Foundation for Amateur Radio" (representing ~30 clubs in the Wash D.C. area) had an interesting slant on WRC 97 and no-code HF access:

"Whether you are for or against codefree access to the high frequency bands, do not look for the world's communications regulators to make it happen anytime in the near future. Perhaps not even in your lifetime." ...

"As such, those hoping to see a codefree access to the high frequency bands for all license holders should not hold their breath."
...
"This would put any codefree access to HF off until 2012 at the earliest"

The reason of course, is simply that code vs. no-code just doesn't make it above the attention threshold for the WRC. It just ain't that significant in the big picture.

Freebanders probably peaked in numbers 20+ years ago. At least in my neck of the woods there were far more people doing it back in the early 70's, complete with tower mounted multi-element "moonraker" antennas and running hundreds of watts. They posed no serious threat to 10 meters on the last two solar cycle peaks, and IMHO I doubt they will amount to much this time.

Good questions. Lack of competition is generally not a
healthy thing. It is hard to believe that there is not at least
one other person in your township who thinks he could
do a better job than you (true or not). That you were
unopposed (and that many League elections are the
same) says to me that there isn't enough interest in
the office to keep it operating.

I just read that the Russians declare an election void
if the voter turnout is less than 50%. The office remains
unfilled until a valid election can be held. Interesting
idea. Maybe we should look at doing the same. In
many cases, leaving the office vacant may be the
best thing we could do. And in cases where an
office fullfills a useful function, it might get some
people motivated to get it filled.

Hi KF7IL,

A couple of minutes of poking around reveals the following, the upshot of which is that you can file online at :

http://svartifoss.fcc.gov:8080/cgi-bin/ws.exe/prod/efpa/forms/900/900_Form.hts

The following is quoted from http://www.arrl.org/arrlvec :

<<Amateurs may renew their FCC-issued licenses "on line" via the FCC web using FCC Form 900. FCC permits on-line renewals at 120 days or less before a license will expire. If a license is already expired, but is within the FCC's two-year grace period for renewal, the FCC will not accept an on-line Form 900 application--but they will continue to accept Form 610 requests for renewal when submitted by mail to:

FCC, 1270
Fairfield Rd, Gettysburg PA 17325-7245. >>

The following is quoted from http://www.fcc.org :

<<Mailing address. The address for making application by mail for renewal or change of name or address of your amateur operator/primary station license or your club, RACES or Military Recreation Station license is:

FCC
1270 Fairfield Road
Gettysburg, PA 17325-7245

Renewal. Use FCC Form 610 to apply for renewal of your amateur operator/primary station license. Use FCC Form 610B to apply for renewal of your club, RACES or Military Recreation Station license. The best time to file for renewal is 30-60 days, but no more than 90 days, before expiration. There is no fee. Section 97.21 of the Commission's Rules, 47 C.F.R. 97.21, provides that when your application for renewal has been received by the FCC at the above address on or before the license expiration date, your operating authority is continued until the final disposition of your application. If your license expires, you may apply for renewal of the license for another term during a two-year filing grace period. The application document must be received by the FCC at the above address on or before the end of the grace period. Unless and until the license is renewed, no amateur operator or station operating privileges are conferred.

When the license shows a call sign selected by the vanity call sign system, the application must be filed as specified in Section 97.19(b) of the Commission's Rules, 47 C.F.R. 97.19(b). A reciprocal permit for alien amateur licensee cannot be renewed. A new reciprocal permit for alien amateur licensee may be issued in response to proper application.

Obtaining forms. Forms 610 and 610B are available from the FCC's forms contractor. Call (800) 418-FORM (3676). Form 610 is also available for downloading from the FCC's Internet Homepage at http://www.fcc.gov/formpage.html and from the Fax-on-demand system by calling (202) 418-0177 from the handset of a facsimile machine. The FCC has discontinued providing license expiration notices (FCC Form 610-R). You may receive a license expiration notification from a private provider, but you are not required to use its services.

Electronic filing. Currently, only an entity that is also a VEC can file electronically your FCC Form 610 for you. The entity may charge you a fee for providing this service.

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #248 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 2-Jan:
-
1. Robert Kirkpatrick, VE9VAR, to Review RAC Election Practices
2. FCC Upgrades ULS Database to Require Better Web Browser
3. Mir Passes Seen, More in January; Some Activity on 145.985
4. New QSL Address for RS-17/Sputnik 40/Sputnik Jr.
5. AMSAT-UK Sets Dates for 13th Colloquium, Calls for Papers
6. Texas Instrument Develops New Chip Insulation
7. U of Washington Study Says Microwaves Affect Lab Rats
8. PC/HDTV War May Be Ending, Hitachi Develops Format Converter
9. Special Event Station Calendar
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. Weekly Propagation Forecast
12. Study Group Reaches Agreement for Modem Standards
13. "The RAIN Dial-up" from Chicago
14. "Ancient Amateur Archives" with Bill Continelli, W2XOY
-
Funding for the program's transmission and production expense was
provided this week by a grant from Gene Wicklund, W0ZOK, of
Horace, North Dakota, where "This Week in Amateur Radio" is heard
via satellite Saturdays at 8:00 PM along the Red River Valley on
the W0ZOK repeater on 443.75 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up in frequency
to 12.031 GHz. Program audio is on the 6.2 MHz analog
subcarrier. A fee has been paid to W0KIE for access to the
satellite uplink.
-
On the WorldWide Web, program audio can now be found in several
```

formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

I don't think age is irrelevant. Our future will be in the hands of today's younger operators soon enough. The 70+ crowd won't be around much longer. There are a number in this group who also operate HF, including 3 of us who operate HF mobile (and I'm the only one in that group who is an ARRL member). The group is made up of Extra, Advanced, General, Tech Plus, and Tech operators in about the proportions those classes are represented in the total amateur population. ARRL membership is under-represented compared to the general amateur population, however, and I think age does play a role in that. I'm one of the oldest members of the group, most are in their 20s or 30s. I'm also the most political of the group, which is why I bother to retain my ARRL membership.

>> The last time I spoke at one of the local clubs, I asked the same question.
>> And out of a roomful of members of an ARRL Special Service Club, less than
>>half those present raised their hands. (And to be a Special Service Club, at
>>least 50% of the members have to belong to the ARRL, so it would seem it is

>>meeting.)
>
>A local radio club usually implies a VHF club repeater. Maybe the 50% ARRL
>members are at home working on HF rather than dealing with local VHF
>repeater politics.

Nope, this is a general interest club. It isn't based around a repeater, though it sponsors VHF and UHF repeaters. It is a club based more on geography. It caters to a wide variety of activities and interests. It has a pretty good HF club station housed in a motor home, supports a number of public service activities, is responsible for a 56 kb packet node, offers clinics and builders' nights, has picnics, does Field Day, runs a hamfest, etc. I can't recall anything political ever mentioned about its repeaters. The technical committee keeps

them going and that's that.

(Note that this bunch is completely separate from the group I hang with. We are aggressively a non-club. We have put up a couple of UHF repeaters to stay in touch with each other, though the machines are open to anyone. We call them our experimenter's intercom.)

>>When I asked who in the group were Dxers or contesters, most who raised their
>>hands were from the ARRL group. But when I asked who did public service, the
>>non-ARRL group was a slight majority (and this has been ARRL's Year of Public
>>Service).
>

>of people from the ARRL group raised their hand. Of course, we don't know
>the relative size of the ARRL group in comparison to the remainder of the
>crowd. Then, when asked about public safety, the "majority" went to the
>"non-ARRL crowd". Again, not surprising -- If there were 5 people in the
>"ARRL group", and 50 people in the "non-ARRL group", even 6 non-ARRL
>members raising their hands would be a "slight majority".

Well let me clarify for you, about 40% of those present were ARRL members. Or in hard numbers, that's 47 out of the 121 present at the meeting. And this is a Special Service Club. Nearly everyone should have been an ARRL member. And I didn't say "most" of the ARRL group raised their hands, I said that most of those who did raise their hands in response to the Dxing and contesting question were from the ARRL contingent. Hardly surpising sine the ARRL runs most of the contests and awards programs.

>>And when I asked for a show of hands for those active in technical
>>experimentation, disproportionately few ARRL members raised their hands.
>
>Not surprising, really. There isn't much technical experimentation going on
>on HF these days anyway.

Not among that group anyway. But there are a number of interesting technical things being done on HF, albeit by too few people. To mention a few, the Coherent crowd, my own PSK experiments, some darn clever ALE type schemes, TCP/IP over Clover bridges etc. There's scope for some really exciting work on HF now within amateur reach thanks to advances in DSP and VLSI. It is virtually a cottage industry dream, but too few seem to even be aware of the possibilities, much less be actively pursuing any of them. I see that as an opportunity missed and a problem to be addressed. HF is a unique resource with unique properties which make it interesting to those of us involved with signal design and signal processing. It is incredibly different from the bland gaussian noise environment of VHF+.

>>I routinely ask these sorts of questions when I'm asked to speak to a club,
>>and the responses of this group were fairly typical of what I've gotten at
>>other club meetings over the last few years.
>
>Beleive it or not, I tend to agree with you. As member and officer of a

>local radio club, I've found the older members more likely to be ARRL
>members, and less likely to show up at club meetings. I have found younger
>members less likely to be ARRL members, and more likely to come to club
>meetings.

Yes, age seems a definite factor. Technical interest too. The sharp technical
folks I know seem to favor belonging to AMSAT or TAPR rather than ARRL.
I belong to all three, but that seems to be the exception. Nor is it surprising
seeing the way the ARRL has seen fit to shuffle technical interests off to
their sometimes published thin technical magazinette.

>However, when I've privately asked non-league members why they haven't
>joined the ARRL, the most common response is 'not enough money'. Most
>have said that, given the choice between spending $25/year to be a
>member at our club, or spend $35 to join the league, they'd rather join
>our club. Since our club gets a QST subscription, they still get all the
>"benefits" with none of the expense.

I don't hear that excuse too much (this is a rather affluent suburban
area). What I do hear is "the magazine sucks" or "why should I give
them my money" implying that the ARRL doesn't represent their
interests. I haven't asked what ham magazines they do read. I should
do that.

I know among my own circle Communications Quarterly gets mentioned
occasionally, but I'm more likely to hear mention of something seen in RF
Design, EDN, Circuit Cellar, Byte, or NASA Tech Briefs than I am any ham
rag. We are the home of Hayes, Scientific Atlanta, Bell South, and the
southeast branches of Marconi, Rockwell Missiles and Space, Lockheed,
Mitsubishi, Motorola, Panasonic, IBM, Bell Labs, GM, Lucent, TDK, Phillips,
etc after all. And not to be slighted, also the home of Georgia Tech.

And they're all represented in our group. It's a pretty astute crowd. Not many
pulp wood truck drivers in our group, though one of the group did drive a MAC
Tools truck and a couple work at the county hospital's data processing center.
One is even a lawyer, and we rag him unmercifully about that. And a couple
of us are in broadcast (though we don't brag about that).

About a third of the group are also private pilots, which I found interesting.
We launch and chase balloons, hunt ELTs, etc. One of us has just finished
a TCP/IP based light switch (go figure). It's a diverse and active bunch. But
not many ARRL members, not compatible with the interests (or politics) of
many in the group apparently. (An overwhelming majority are true Jeffersonians
or outright Libertarians with very little use for Big Brother's intrusiveness.
Like me, they think amateur radio is overly and irrelevantly regulated, which
they blame largely on the ARRL, and under enforced, which they blame
directly on Washington.)

80m crowded? I sometimes have to tune for 15 minutes to find a signal on
80m at night. It's mostly a under utilized wasteland while next door 75m
is packed wall to wall with good ole boys cussin' and fartin' (code tested
every one of course).

Fill out and send in an FCC Form 610. One that is dated September 1997.

After the First of January all previous editions of the 610 will be
obsolete. The new 610 requires you certify that you "have READ and WILL

COMPLY with Section 97.13(c) of the Commission's Rules regarding
RADIOFREQUENCY (RF) RADIATION SAFETY and the amateur service section of
OST/OET Bulletin Number 65."

Or, you can file an application on-line.

You might want to retitle your article as "LEGAL Code Free Access to HF? - Not in your lifetime."

You can only repress people so long with outdated, unnecessary, politically-motivated, unfair rules. At some point, they will rise up and act against the establishment. This is exactly what is happening now in amateur radio. Witness the large increase in the number of outbanders in general, and especially those who operate past 28Mhz. These are, for the most part, serious radio enthusiasts who would gladly obtain an amateur license if the testing procedure was relevant and reasonable. But since it is not, and since the old men who control the ARRL and wish to keep the bands all to themselves (the eventual cost being the demise of amateur radio as we know it, but these guys will long have been silent keys by then, so they don't care), these operators have decided the system is broken and that they will operate there anyway. We don't need no steenkin' license. Expect this trend to continue and explode when the next sunspot cycle approaches it's high point.

"Where's that big 'Ol CB RAMBO?"

You've got to be kidding. Back in the 70s, it took some serious and expensive equipment to be a 11-meter freebander/outbander. To do it "right", you needed a full-coverage amateur rig (Kenwood, Yaesu, etc.) that had been modified to include 11 meter coverage. Either that, or you needed a top-end SSB CB that had been modified to allow connection of a VFO. Back then, this equipment was bulky, expensive, and you needed a qualified tech to make the mods. Very few would risk their commercial license to do it, as this was back when the FCC actually had some enforcement "teeth."

But the advent of inexpensive microprocessor chips changed all that. Nowadays, all an aspiring outbander has to do is walk in to any truck stop (Flying J, Pilot, etc.), purchase a mobile "10-meter amateur transceiver", clip or jumper a few wires, and he's immediately on-the-air from 26 (or lower) to 28Mhz. As a bonus, he gets the entire 10-meter band besides! Isn't modern technology wonderful?

Actually, Martin Luther King, Jr., said that to justify civil disobedience. In essence it said, "We will do as we please. If what we do falls within the law, ok. If not, ok, too."

I don't see the tie between the Nuremberg (Nuernberg) War Crimes Tribunal and the U.S. violation of an international agreement (even though the U.S. violates many international agreements when it's in "our" interest). We're not really talking about committing atrocities here.

Nah, Rambo,
Back in the 70's half of the CB'ers I knew had "extended coverage rigs" or at least a toggle switch on the front that gave them an "upper" set of channels. And many ham linear amplifiers required minimal or *NO* mods to provide "big shoes" for these fellows. I did a lot of antenna work for these guys when I was a kid.
I just don't see the level of interest being there anymore, a lot of the same distractions that are affecting ham radio popularity are affecting freebanding. At least in the U.S.A., There may be a big boom in 3rd world countries. (Most of the ops I here below 10M and in the bottom end are speaking Spanish).

Well, Jim, I think that it is an accurate picture of the code requirment as it relates to the world structure. I'm sure code will remain, but the present tier of 5wpm, 13 wpm, and 20 wpm reletive to the U.S. liscense structure IS going to change ! The international agreement only requires that the operator " show proficiency " in Morse. Our hobby will not survive otherwise.

Tests do not generate " standards ". The FCC defines our standards. The tests only reflect a certain level of knowledge required of the operator in order to recieve privledges reletive to liscense class.
Overall, I have met better operators on VHF than on HF. I have heard things on 20 and 75 mtrs that I thought were to be found only on 11 mtrs.

That's certainly true, most outbanders I knew back in the 70's didn't have a clue what was going on. I remember studying to get my novice while listening to 'outbanders' talk about 'tightening up' their beam by using it alot. 'Tightening up' I asked, what does that mean, Oh don't you know running more RF through it makes it 'better and more directional' har har har.

> BTW, did you ever hear of Siltronix? Yaesu? Swan? All those were
> available factory ready for ten or eleven meters in the mid-70s.

I gotta believe Siltronix and Swan were the most popular for the outbanders, they conveiniently put the channel numbers on the VFO so folks would have a clue as to where they were.

> it's harder and/or more expensive to get on the "freebands" now, since
> there's not nearly as much good surplus CB gear available.

Must agree with Glen, I dont think the Siltronix even required a modification to run above 28MHz. Other than mabye a 25 watt mobile rig, I don't know of many 'full size' amateur rigs that will run below 28MHz with just a simple mod. (manufactured in the last 10 years that is)

> Does anyone even make a decent CB beam antenna nowadays?

Well that's O.K most outbanders are designing their own Yagis, Loops and Quads, har har.

Any properly designed fully voiced modulation with uniform symbols can do
better. There are a number of such implementations available to the amateur.
I could mention Clover II or PACTOR II, but they are more complex than necessary
to beat OOK Morse. Probably the best contender is Coherent. It's free, runs on
even an old original IBM PC XT, or DOS palmtop, and handily provides copy
when an operator can't even detect the signal by ear. But even plain old RTTY,
when sent at the same speed as Morse, can easily beat manual OOK Morse
under harsh signal conditions. And the complexity of the transmitter needed to
send it is no greater than for an OOK Morse transmitter (and the receiver is the
same).

Lets look at why this is so. First, a fully voiced modulation delivers more
signal energy for the same peak power output than does OOK. Ordinary
FSK has a 3 db advantage over OOK in delivered signal power. And with
a full decoding matrix, it picks up another 3 db gain at the symbol decoder.
So we're starting out 6 db ahead of OOK. (If you insist on limiting the
transmitter to the same *average* power output, we only get the 3 db
symbol decoding gain.)

Second, Morse uses five symbols, three unvoiced, which have different
durations, and thus generate distinct spectrums. Since we can't know a priori
which symbol will be received next, we can't form a matched filter for Morse
symbols. And that means we have to allow through to the symbol decoder
excess noise equal to the widest possible symbol bandwidth. A code, any
modern code, which has a single uniform symbol length can have a matched
filter formed for it. This nets us an Eb/No advantage after filtering of 4.77 db
over Morse. So now we're at 10.77 db advantage net.

Third, *manual* OOK Morse needs symbol shaping which increases its
total occupied bandwidth beyond Nyquist's 1923 limit (this isn't Nyquist's
more famous sampling limit, this is his minimum signaling bandwidth limit).

If we comply with CCIR recomendations, the minimum occupied bandwidth
for *any* OOK Morse speed below 60 WPM is determined by the sidebands
produced by this shaping. That's 66.66 Hz.

A manual operator starts having trouble correctly copying OOK Morse
if receive bandwidth is restricted to less than this. (Many amateurs blame
this on filter "ringing", but it isn't. Even with a non-ringing FIR filter this
effect still exists as the code symbol timing edges become more and
more blurred as bandwidth is restricted.)

But we can do better with a uniform machine detected code sending at
the same WPM as Morse. For example, using Baudot sent at 20 WPM,
the FSK double sided matched filter bandwidth can be 16.66 Hz (That's
twice the 1923 Nyquist limit. We can approach the Nyquist limit more
closely with a bit more clever signal design, but we don't need that extra
complication to beat OOK Morse). That can give us a 6.02 db advantage.
So the total advantage is now 16.79 db. (We normally use this excess
Eb/No margin to allow us to go faster rather than to dig out a weaker
signal, but we don't *have* to do that. Shannon says we can trade
speed against SNR and bandwidth in any proportion we like.)

If in addition we throw a strong FEC into the mix, we can achieve a coding
gain in excess of 20 db. So now we're at 36.79 db total advantage over
OOK Morse for error free copy at a given speed. (But this latter advantage
can't be fully realized at the noise floor. It is primarily useful to allow us to
go faster when the signal is already above the noise floor. For example,
Clover II and PACTOR II take advantage of this to go over 1,000 WPM
in conditions where a manual Morse operator would be hard pressed to
do 20 WPM.)

Now some caveats. A very good manual Morse operator does a certain
amount of post processing in his head. This cuts into the 6.02 db gain
a uniform code has over OOK Morse due to optimum passband filtering.
And implementation of perfect matched filters in hardware can be costly,
so corners are often cut there and the full 4.77 db advantage for that isn't
always realized in practical systems. So the real advantage seen by good
machine techniques using uniform codes and operating near the noise
floor is typically only about 9 db net over the best manual Morse operator.

Tests have shown that a very good Morse operator can do 20 WPM with an
Eb/No of 13 db while machine techniques can equal that performance at an
Eb/No of 4 db without resorting to things such as turbo coding. With turbo
coding, an Eb/No of 2 db has been reached (Mars Pathfinder). Now *that's*
a weak signal. It is only 3.6 db stronger than the weakest signal Shannon
says is even theoretically possible to detect.

To put all this in perspective, the difference realizable between OOK Morse
and currently realizable best amateur technique (forget Pathfinder) is about
what you get operating with and without a kilowatt linear. So a signal level just
copyable by the best manual Morse operator when a linear is used at the
transmission point can still be copied without the linear if a uniform code and
fully voiced modulation are used instead of OOK Morse. And the cost of the

symbol coder and decoder can be much less than the cost of a linear.

Manual OOK Morse isn't best, and it hasn't been best for over 35 years, even on an amateur budget. (Irv Hoff was publishing near optimum symbol decoders in QST that long ago, which amateurs could build on a beer budget.) But it seems most amateurs haven't paid attention, and still believe the Morse Myth brainwashing that Morse gets through when nothing else will. That isn't true now, and it hasn't been true for a long long time. NASA knows it, DOD knows it, the Coast Guard knows it, commercial operations know it, maybe some day amateurs will know it too.

Now note that a working Eb/No of 13 db isn't *awful*. A SSB voice operator wants about 11 db more than that. But 13 db Eb/No also isn't nearly the best we can do as amateurs. And we can do pretty darn good digital voice at an Eb/No of 10 db, so we don't even have to leave voice modes behind, except that current FCC rules won't let us do that on HF. The ARRL has fought every attempt to change those rules with the same fervor it has used to defend Morse testing. That's pathetic.

Blah blah blah, we've heard this argument before, oh we would all GLADLY get our licences if they would just make it easier for us, make it the way WE want it and we'll all do it the right way. Har har har. I agree that CW may not be relavent to todays communications but I'll certainly fight to keep it. Don't worry about the old men at the ARRL, I'm 35 and will be around for a few more years. Besides whats relevant about learning how to calculate a 1/4 whip for 2m, I can buy one anywhere, should we drop this from the test because it's really not relevant to me being a good operator?

Aw c'mon Gary, if ya had to tune for 15 min. the band was dead! As far as the old guys cussin and fartin, well I guess Im glad they have a place to go and do it. After all, most of them seem to be having a good time. May not be the way I choose to operate but they really have little or no effect on my operations. As far as it being under utilized, who should we complain to about that? At least the guys on 75 are USING the available band space.

Well around here every city I have lived in has a emergency
communications room in the local police department or city hall which
has a dedicated HAM station.

Believe me, after Loma Prieta a LOT of hams were bush furnishing
communications to agencies overwhelmed by the disaster.

Maybe not so much the police, but a lot of Oakland hams accompanied the
morgue people as they pulled people from the collapsed freeways. The
hams were able to link their efforts with other agencies usually not

connected because they operated on other frequencies or had their own radio systems ovwhelmed.

I don't mean an insult, but you must live in a land where nothing ever goes wrong. I have been a member of the Red Cross for many years. In addition, as a amateur, the clubs I have belonged to have furnished "courtesy" communications to local events, such as demonstrations, races, etc.

Really, I can't fathom your comment that the local authorities want amateures to stay away.

We must have totally different experiences with ham radio.

Oh, I see!
Well I do agree that there is probably more of an effort to "acquire"
our bands for commercial use then I have seen before!

But on the lighter side, just imagine some "Dope" carrying around a cell
phone ith a 40 meter whip. Maybe that is the answer, such people would
be short lived as they walk under power lines....he he!

RS did sell a 10 meter rig (HTX-100) a few years back. Fairly decent for about $200. But the market - I guess - was not there. I use it as a standby and a mobile rig - great for vacations etc. Kenwood was talking about selling thru the more common electronic retail stores - don't know what happened to the proposal. But I don't think that is the solution. High cost multi mode/multi band HF, antenna acreage -although there are some decent mini footpring HF antennas out there - and lousy band conditions over the last few years have to be overcome.
Talk HF up, use your clubs, be an Elmer, Use it or loose it, remenber the sun spotcycle is on its way up

Regarding the British detective show involving Inspector Morse (appears on PBS and A&E), the name "Morse" is sounded out repeatedly during the show's ending music - the violin section of the orchestra "sends code." But you incorrectly said the Inspector's name in not mentioned during the show - that's not true.

I don't watch much TV (except CNN), but it's nice to occasionally see a drama or two.

Happy New Year,
Jeff KH2 PZ / 7

Slime wrote: "There isn't such a copy (of the ARRL HB) in the library unfortunately... That's how bad the amateur radio stands today."

Your library has an excellent collection of radio electronics books (easy to telnet to your library's computer system). I'm suprised you couldn't find the antenna length information you sought.

The ARRL will supply your campus library with a complete collection of League publications at a greately reduced rate. Have your reference librarian contact the League for further info. (You might consider paying for the pubs yourself [or asking your area clubs to make a donation] as a gift to both your library and your local amateur community. Again, the League provides a reduced rate for their entire collection of pubs when those pubs are intended for a library.)

A happy, healthy, and prosperous new year,
Jeff KH2 PZ / 7

No it doesn't. It makes more sense to test Morse. If it
were any other way, the morons would just hop off to HRO and
buy the answers to the tests (like ALL the written exams today).
By making them learn and pass a Morse proficiency test, they
have to WORK to get it. That's why there's so many tears being
shed...

The key is that a dipole is a little bit shorter than a
free-space half wavelength. In practice, you always cut
the dipole a little longer than the calculated length and
prune it for desired resonance.

"Feet"? I measure my antennas in meters. Doesn't everybody?

I can't speak for satellite WEFAX, but the only SoundBlaster HF FAX receiving software I've *ever* seen run successfully under Windows 95 is the new release of WXSAT, which despite the name does HFFAX now too. Thanks to Christian Bock for an excellent piece of software!

I hope to see that the RS sells a multi band HF + VHF rig (not only
for 10m... incl. VHF also so no-coders can purchase it) for around
$800US or $1200CAN.

One of the problem for HF is that the equipments are very expensive.
Also, if you don't hold a code (majority of the amateurs), you usually
don't buy a HF rig.
ICOM-706 kinda solved the problem, but I want to see something better
than this.

I am sure many people purchase the radio if there is such one at your
local RS.

Needed:

Mod sheets for Yeasu FT-8100R.

I am a member of the Civil Air Patrol.

I've found none on qrz.com or oakland.edu. I have opened it up and looked for obvious jumpers, but there don't seem to be any. I know it's new, but somebody out there must know.

Thanks in advance.

Anthony Midmore, Vice Commander
Washoe Jeep Squadron, CAP

From: johnsi@nospam.sprynet.com
Message-ID: <686jm1$mq0$3@lal.interserv.com>
Source record: 183261

Does anyone know the exact frequencies of these 5 channel 49 Mhz
walkie-Talkies?
Please email me directly.

Thanks! 73's

John N7MTB

P.S. Remove NOSPAM from my email address.

I wonder why you think that Gordon West is even remotely to blame for "complicating the problem"? Have you ever attended one of his classes? Are you aware that his students *must* do home-study prior to attending the class (where each person's home-study is examined so that mis-understandings and misconceptions can be corrected in class)? Are you also aware that every question in the Novice and Technician question pool is covered during the three day class? His students work damn hard in class, probably harder than most who study on their own. Further, are you aware that he does none of the examinations himself, but has independant examiners conduct them for him?

Oh, you mean his books?

Maybe you should consider placing the blame on the FCC, not Gordon West for allowing the question-pool, and answers to be printed? It seems to me that Gordon West is not the only one that sells books that give both the questions and answers... the ARRL does it too. They even have a web site where you can download them! Let's also not dismiss the web sites where you can have practice tests made to order for each of the FCC elements and see how much you've memorized.

My guess is, Tom, that you've never met Gordon West. If you had, I think you'd realize that he's one of the nicest, sincere, knowledgeable and generous hams around. He's done more for the good of ham radio than probably anyone else in the country. One thing he doesn't do, is sell ham radio licenses, for profit or otherwise. One thing he does do, is help thousands of prospective hams get into the amateur radio service and enjoy the hobby. What have you done for the service?

Julian

Haw haw haw, while I am not privy to Gordon Wests finacial statement I'd have a real hard time believing he's making any real money. He is one of the more sincere hams I've met, if you bother to look at his book you'll find it's more than Q & A, detailed explanations are given regarding formulas etc.

As far as selling for profit, I wonder how many hams looked the other way when General Class could test Novices for Code and theory? Doesn't really matter, if you choose to be an idiot on the air it's a personal choice. It has nothing to do with how difficult the tests were or otherwise. Lets place the blame where it belongs, on the individual, not someone who has helped thousands get thier license and join our hobby.

Looking at an Icom Band limits chart, you can essentially operate CW
anywhere (if you are an extra) from 14 MHz to 14.350 MHz. There are
SSB/SSTV/Fax limitations, but it would seem that CW may be used anywhere

Glad you asked... many of your posts are very close to unreadable. I realize that English is not your native tounge, which I certainly take into consideration. Even considering that, many of your posts contain arguments that have little or no connection to the thread, you contradict yourself in almost every other post. Another example is below, you seem to be confused why people are looking at what you have to offer yet not buying it or supporting it with donations. What does this mean to you m@s@? Lets think about it, people look at what you have to offer, yet they don't buy, hmmm.

Did you consider perhaps that what they saw was not appealing to them? Furthermore, many of you posts are so outrageous that it makes your readers think your either a troll or completly brain dead. For example your posts about wanting to talk to the local police on their frequency to "help them" or "thank them" for doing such a nice job. Are you so stupid that this does not sound completly ignorant? With your knowlege of radio, certainly you know this is not only illegal but could, in certain circumstances, land your dumb ass in jail. Yet you continue with the same kinds of stupid remarks and questions, then you ask "whats wrong with my posts" well there you have it. Can you understand what I have written to you today m@s@?

> > Additionally there are
> >plenty of clubs that offer free Elmering services, why would someone send you

Please explain what people 'trusting you' and 'liking you' have to do with accessing you web site? I have visited many web pages of people who I think are complete idiots. If you think because someone visits your web site they like you, or trust

you, then you need to take an elective in sociology, if your trying to sell something over the net a few marketing classes might not hurt either.Tim

SB DX @ WW $OPDX.337
Ohio/Penn DX Bulletin No. 337

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 337
BID: $OPDX.337
December 29, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W3UR & The Daily DX, KV5V, KG6AR, W7TSQ, AH0W/OH2LVG, CX7BY, DJ5AV & DX News Letter, G3NUG, G3SXW, G4BUE & DX News Sheet, JA1ELY, LU1DZ, OH1BOI, SM0AGD and ZS6Y for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy New Year". Also, we would like thank the many who have contributed information over the year (there are too many to list). Without them there would not be an OPDX Bulletin.

4F, PHILIPPINES. Look for Arie, PA3FWG, to be active from January 1-20th, as 4F1UFT. His frequencies and modes activites are unknown at this time. QSL via home call.

9N, NEPAL (Plenty of activity from here!). Kazu, JA8MWU, will be in Kathmandu on business and also on holiday from now until January 10th. Kazu hopes to operate as 9N1WU in his spare times. Look for him on all bands, mainly SSB. QSL via P.O.Box 1214, Kathmandu, Nepal (direct only). Don't send to JA Bureau.
15 members of the "Japan UNCEF Ham Club" members will be in Nepal on a study. They report that this is not a DXpedition, but they will be there until January 13th. They will operate with their own callsigns. Naoki, JE7RJZ, will be active from Nepal as 9N1JZ (he hopes to receive this callsign) from January 4-10th. Naoki hopes to be active mainly on CW. QSL via JA7FWR
Brad, KV5V, and his daughter, KC5RPK, are currently in Bangkok, Thailand, and will stay in the city until Thursday monring, January 1st. They will arrive in Kathmandu during the early afternoon and stay in Nepal until January 13th. Brad states that he will be able to operate from Dick's (9N1ARB) station using his callsign. Activity will be limited, because they plan to do some local travels and visit with friends in the evenings. When active, look for him on 80/40/20 meters. Brad states

that he will listen for openings to the U.S. on 40m and 80m, and that he will fire up the station at 0100z on 20m and work the path as long as it stays open. Operations will be mainly CW and RTTY.

C5, THE GAMBIA. The "DX News Sheet" reports that Alan, G0SAH, will be active from here until January 9th as C56/G0SAH. He will be using a FT-800AT into a HF6 vertical. Alan may also activate one of the coastal islands (IOTA AF-060). QSL via home call.

L20XSI WRAPUP AND GACW NEWS. Alberto, LU1DZ, GACW Coordinator, provides OPDX with the following: "GRUPO ARGENTINO DE CW NEWS". The GACW reports the five day operation of L20XSI, the GACW 20th Anniversary station, which was active from Staten Island (SA-049) in the Tierra del Fuego Province (counts for DXCC as Argentina) made 5303 QSOs (4518 CW and 785 SSB). The report states QSLs should be ready in about 30 days, possibly a little more. The report also states that Hector/LU6UO and Ernie/LU4AXV are now active from Deception Island as LU1ZC. They arrived on the island on Tuesday, December 16th, after an airplane and icebreaker trip to the island. This island counts as South Shetlands, and the two operators will be active until the end of February. LU1ZC has been very active on CW on 40/20/15 meters and the WARC bands. QSL to LU6EF or the perferred address: GACW, Box 9, 1875 Wilde, Buenos Aires, ARGENTINA.

NEW OFFICIALS. The 1998 Officers for Western Washington DX Club have been announced. They are: President - W7TSQ, Bob Preston; Vice President - K7BTW, Dick Swanson; Secrectary - WA7BAY, Mike Schone; and Treasurer - N7LSL, Marina Zuettel. The Board of Directors are: W7JEN, Duncan Carman; K7ST, Adam Kerner (exAA7FT); N7TT, John Gohndrone; W7VV, Roger Huntley (ex N7IRR); W7QN, Joe Gregory and N6MZ, Mike Mraz.

PJ9, CURACAO. The "DX News Letter" reports that John, W1BIH, will be active as PJ9JT on all bands between January 10th and March 31st. QSL via W1AX.

QSL INFO AND NEWS.....
Roger, G3SXW, reports QSL requests for 5V7A (CQWW CW Contest, November 29-30th -1997) are all answered and up-to-date. Those still arriving are being handled daily. Roger also states, "This is thanks to the grand efforts of GM3YTS who printed the cards within days of getting home, and especially the Herculean efforts of Tom, GM4FDM, our QSL manager. Splendid job, Tom. Many thanks indeed." Direct requests should go to GM4FDM: 3 King's Crescent, Elderslie, Renfrewshire, Scotland, PA5 9AD. Requests for bureau replies can be E-mailed to him at: wylie@sol.co.uk (Show just your call, date, time, band.) Note that outstanding requests for 5V7A in 1996 continue to go to Bill, GM4AGL, who still has the logs and blank cards. Tom, GM4FDM, is doing QSLing only for 1997. For more details about QSLing 5V7A (and much more) visit their web page at:
http://www.getnet.com/~k7wx/5v7a.html

Chris, KG6AR, QSL Manager for FO8DX states that the FO8DX cards are not back from the printers, and the cards should start coming out

sometime in mid-January.

Jari, OH1BOI, reports receiving a recent letter from RW6HS and the RW6HS QSL Service handles cards for the following stations (direct only): CE2EZE...CT3FF...DU1EIB...FP5EK...KP2J...OD5EH...OD5SE... OD5NO...TA1AZ...TA2AO...TA2EM...VK4SJP...WP4AMS...YV5DEH...ZB2FK... 3DA0BL...3B8FQ...4Z5FW...9H1ED...9H1GY...9H0PJP...4Z5GP...4Z5BZ... 4Z5GV...4Z5DW...4Z5FB...EO6AHG...ER1OO...EX8A...EX8QA...EY7AH... RW6HS asks for a SASE with 2 IRCs per QSL. The address is: Vasil M. Kasyanenko,RW6HS QSL Service, P.O. Box 20, Georgievsk, Stavropolsky, Kraj 357800, Russia. The same address is also the address for the UA6call area QSL-bureau.

ZS6Y reports that no E-mail should not be sent to "zs6y@club42.co.za" because the service provider went "Belly Up". Any QSL request should be sent to QSL Manager KK3S.

RSGB "100 YEARS OF AMATEUR RADIO AWARD". Neville Cheadle, G3NUG, Chairman of the RSGB HF Committee, reports to OPDX that the RSGB has recently announced an award to celebrate 100 years of amateur radio in 1998. The new HF award will be issued for making 100 points during the course of 1998. The award is available to listeners on a `heard' basis. All claims must include a log extract certified by two licensed amateurs or an RSGB affiliated club official and a summary sheet of the points claimed per contact listed by callsign. The press release on the details of this award will be provided to OPDX InterNet Subscribers as an additional bulletin.

RTTY FROM THE ANTARCTICA. Raul, CX7BY, reports his friends Paul, EM1HO, and Roman, VP8CTR, will be active on all the bands in the next ARRL RTTY Roundup January 3-4th from Galindez Island (Antarctica).

SV/A, MT. ATHOS (Possible new operator?). "The Daily DX" reports that Dimitris, SV2YC, works for the bank of Thessalonique in Northern Greece which may be opening a branch in Mount Athos in March, 1998. If he does get assigned to that location, he will try to obtain a license to operate.

T31, CENTRAL KIRIBATI. Norbert, DF6FK, will be active until January 10th as T31BB from Canton Island. His plan of operations in unknown. QSL via home call.

XW, LAOS. Zorro, JH1AJT, has been extended a special invitation to attend the 30th anniversary celebration of Khao Sanpathet Lao (KPL), the Lao News Agency, to take place in early January, 1998. In conjunction with the event, the Special Anniversary Commission has also extended permission for an international team of radio operators to conduct a DXpedition operation from Vientiane, Lao, January 5-13th. The team of operators will include Zorro/JH1AJT - teamleader, Yuki/XW1A, Frank/ AH0W/OH2LVG, Shin/JA0DAI, Toshio/JP1IOF, John/SM0DJZ and Erik/SM0AGD. The DXpedition will be an all-band, all-mode, multi-station effort with special emphasis on low bands and CW. Operations will also include an effort on 6 meters and RTTY. Special event callsigns for the DXpedition will be XW30 for CW and XW30A for SSB, RTTY and FM. PLEASE NOTE: The callsigns are XW3-zero and XW3-zero-A. The QSL Manager will be SM0AGD: Erik Sjolund, Vestag.27, S-19556 Marsta, Sweden. Their operating frequencies will be announced at a later date. For more information, check the Midway-Kure DX Foundation WEB site at: mkdxf@aztec.asu.edu

ZK3, TOKELAU. "The Daily DX" states Peter, ZK3PM, who works for the New Zealand government, will be active from Fakaofu Island for the next 2 years. Peter states he is not a DXer and does not have any QSLs cards. It is suggested that if you work him and want to QSL, you may want to send an index card or a generic QSL with all the information on it so he can sign it. The only QSN OPDX could find on him is that he was reported on December 23rd at 0625z on 14260 kHz. QSL via Peter McQuarrie, Fakaofu Island, Tokelau, South Pacific via Apia Samoa.

CBRambo is one of those cbers who is a wanna-be ham but has such a
simple mind-set that he can't pass the simple test to make the grade, so
the only thing he can do is come here and poke fun.
And as you say, why would a ham want to know anything about some piece
of cb radio junk?

Does anyone happen to know if a Supreme 504-A tube tester is a mutual conductance tester or an emission tester?

Have any ideas how old it is?

Any thoughts would be appreciated.

Thank you.

6243. Info Needed On Sprague Cap Checker Model Numbering System/Specs

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-28 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <684iaj$a3p$5@csu-b.csuohio.edu>
Source record: 183282

Hi,

Does anyone know the Model Numbering Sequuence for Sprague Cap Checkers? And the basic differences in features/specs for the respective model numbers?

Not knowing Sprague's model numbering system, I don't know which model was the top line unit and which was the budget priced unit. For example, which is the better featured unit? A Sprague TO-3; TO-4/TO-4A; or TO-6/T0-6A?

I am looking for a cap checker to work on old instrument/guitar tube amps, but do not know which is the higher model or which models would be suitable.

It seems I see all the Sprague model numbers mentioned above in the $20-$40 range supposedly in good running order, but if I have a choice--I don't know which is the better unit.

Any advice would be appreciated.

Thanks.

>actually had some enforcement "teeth."

Oh, nonsense. You could put a very effective bootleg station on 10
and\or 11 meters in the mid-70s for well under a thousand dollars.
With a bit of scrounging, you could do it for less than $500,
including antenna, rotor, and support. I had a (legal) ten meter
station consisting of a Drake TR-3, five element Hi-Gain Long John,
rotor, and push up mast (all purchased used) that cost me about $400.
It would also operate on 11 meters. No particular expertise was
needed. And if you had a bit of money, you could go first class
without knowing a thing about technical details. I know a fellow who
bought a Drake C-line and 2kw amp from a local ham dealer, took it
home, and put it on 11 meters. All you needed was a plug-in crystal
(available from Drake for about $5) for the R-4C, and you were in
business.

BTW, did you ever hear of Siltronix? Yaesu? Swan? All those were
available factory ready for ten or eleven meters in the mid-70s.
Kenwood and others would go on 11 with the addition of a crystal and
perhaps some retuning of a circuit or two.

As for the baloney about licensed techs, most of the simple mods
needed were trivial, and there were plenty of "techs," both licensed
and unlicensed, who'd do whatever you wanted to a radio if you had the
money. Incidentally, I personally modified the TR-3 so it would cover
BOTH 10 and 11. Normally, you could cover only one or the other. I
had to figure this mod out myself, as nobody I talked to had ever done
it.

Either you weren't around back then, or you have a very poor memory.

>But the advent of inexpensive microprocessor chips changed all that. Nowadays,
>all an aspiring outbander has to do is walk in to any truck stop (Flying J,

>bonus, he gets the entire 10-meter band besides! Isn't modern technology
>wonderful?

No different than it was with most of the mid-70s gear. I'd guess
it's harder and/or more expensive to get on the "freebands" now, since
there's not nearly as much good surplus CB gear available. It's been
years since I've heard of a Moonraker or even a Starduster for sale
used.

Does anyone even make a decent CB beam antenna nowadays?

Amor Powers wrote:
> With CW and HF Amateur activity dwindling, isn't it about time we stop
> giving Special Rights to CW at the expense of voice modes?

I thought it was the other way around ..... every time I listen to CW bands, it seems that it'd be hard to get a word in edgewise, but people always do. The voice bands, in comparision, seem to have people queued waiting for the channel to clear along with the half-dozen people trying to hold a voice conversation, or worse, events degrade into who wants to waggle the largest amplifier/antenna array in everyone's direction .....

> Special Rights should no longer be needed! Once assimilated into the
> bands homogeneously, CW will be able to get through the QRM just fine,
> since it is such a "Superior Mode". Our sovereign rights in the USA to
> the international DX phone territory have been denied us for too long.
> We burn for the freedom already enjoyed by other hams of the world.

Voice should be able to get by with a smaller allocation as well, and if it can't, well, there's packetized voice to look forward to. I think we could live with trimming some of the phone allocation to provide more data and CW allocation ..... especially if we use some of that allocation for packetized voice. At the very least, this would help get rid of the "my linear's bigger than your linear" fight on certain parts of 80m .....

> Equality, parity, and total integration for all modes!

Liberte, egalite, fraternite? Yeaaaah, right ..... you want freedom, buy a set of paddles or a straight key and get to learning code instead of illustrating ignorance .....

No. I mean that your standard VHF/UHF FM rig is channelized in 5 KHz
steps, and you cannot tune off those channels like you could with a
VFO. Actually, as Gary pointed out, almost all newer synthesized
radios are "channelized" if you want to look at it that way. Even HF
rigs seldom tune in less than 10 HZ steps, although you may have a
RIT/XIT that lets you tune in between those steps if you somehow need
to do it. Or maybe the RIT is digitally synthesized, too, I dunno.

You can get a SSB 11m rig retail for less than 100 bucks now, Glen. Multimode for US$135. Actually, many FreeBanders are using rigs costing about US$200 new or less (used), with linears at about US$0.75 per watt. Cheaper than it has ever been to put out a good signal between 25 and 30MHz. More hams should look at some of these bargain-basement high quality rigs as exciters on 12 or 10m, or for transverter systems and mobiles. Easy conversion to 15meters or even 20 or 6 meters. The conversion to 15 only takes a new crystal, a few caps and adding a few turns to the final tank. 15 is getting to be a good mobile band as the cycle is on the upswing.

They make better rigs (when converted) than most of the cheapo QRP ham-brand rigs being sold. Hot RXs with good noise blankers, multimode, and fairly miniaturized. Usually, you can get about 15W or more out of one on 15 or 20m. I've never tried doing a 40 or 75m conversion, but have used them with a tiny little 75m transverter.

Even the 11m antennas are a cheap deal for the ham looking for a 15 or 20m whip. One of the 4 or 5 foot long CB whips can be easily converted by adding a longer tip. Take advantage of this stuff while the current glut in the market is happening!

Hello Alex,

My name is Albert and I saw your message.
Now my question is, I have a Tait Portable Radio T3010 and I want
to program it by using my PC.
But I have problems to find that software ver 2.05.
Is it posible that you send me the software you have and tell me more about
the interface cable.
And do you now were I can find software for the TAIT 3010 ?
I hoop that you will do that for me.
My Email adres is alberts@knoware.nl
Hoop to hear from you verry soon.

Thanks and greetings,
Albert Schaap

I've been reading the ocntroversy over learning the code. And I have to admit it's really funny how many people are for and against it. Just a couple of points...

1 learning the code for use on the HF bands is not a USFCC requirement. It is an international requirement. and is set in international treaty that the united stated has been a signatory for years. I believe the treaties are part of the intenational telecommunicaton union (I am sure I have the name wrong, but it something real simular to this.) I am not certain that this is part of the US licensing test. Even if it were in the question pool would they show up on the ham tests? I don't know.

2. In particular to the use of the code in times of emergency...how many of you are aware that as of the early 90's that the US Coast Guard no longer requires their communications people be code profficient? Also if memory serves I have read or heard something to the effect that the USCG no longer maintains a listening watch on Maritime Code Only Frequencies, aboard ship or watch stations. This would indicate that the use of code in emergencies has been overcome by technology and events. As some one else pointed out...it hasn't been used significently in the last few years.

3. In general any one who can pass a test whether it be a CW test or written test does not prove profficeincy in the subject being tested. IT only proves that they can learn enough of something to pass a test not to use the material. For years I have noticed that many people study and sweat bullets to take a test and once they have taken the subject test they can not apply the material in real life as they learned it by the book not through practical experince. Many of our operators, (including the moe noisy ones about the code) could propably not identify their own call signs in 5wpm cw if their lives depended on it, let alone take the radio knowledge used to pass the test to design and build a radio.

4 and the brings me to this point. Radio technology has always been a little tough to understand. Especially for the novice. But it was doable. You go down to your local electronics store, and get a good book on radio design, and then buy the parts you needed to build a radio. Now today I am not sure the average ham radio hobbyist can build some thing like a decent SW reciever, let alone anything as sophisticated a FM tranciever, or heavens forbid an HT. I know that many of the electronic parts stores have the parts, and the tools. But for many of us anything beyon simple PC board soldering is out of our league, especially when you consider surface mount technologies, and computer control of radio. Sure you just install the right chips in the right sockets on the pc board but I know I can't design and build one... that will work. It's getting to the point that unless you have a Double E or have serious money to invest in the tools and equipment

and the time to learn how to use them many hams would rather buy their equipment from local ham store. A question for those of you who are so strong about the code (those of you who say not learning the code is down fall of ham radio,) can you build a modern radio?

5. In united states ham radio has several fine traditions, one is being there when our ocmmunities need us. The other is if we know an operator is not living up to our standards we take the time to find the operator and assist him or her in living up to our standards. Ham radio has always been self policing in this fashion, it keeps the FCC from having to do it, and allows us to have a level of credibility that keeps the FCC from having to make more restricive rules.

At any rate, that's my 5 cents.
Bill Carty

Morse Code in Music

While listening to your favorite music, don't be
suprised if you hear those strange and annoying
sounds of that terrible Morse code!

Case in point, on Joe Walsh's solo album
"Songs for a Dying Planet" is a song titled
"Vote For Me". The song is preceded with Morse
code which pounds out "REGISTER AND VOTE FOR ME AR".
Brian, KF2HC, states that the same message appears
on Joe's first album "Barnstorm" in a song titled
"Mother". Joe holds an Advanced class Amateur license.

Another album worth noting is Roger Waters' album
"Radio Kaos". This album is filled with Morse messages.
Most of the code is underlying the haunting music and
very difficult to copy. The album's cover is littered
with Morse code characters which spell out the album's
song titles!

The rock band RUSH has a song title "YYZ" on their album
"Moving Pictures". This songs starts out with heavy
percussion belting out "YYZ" followed by bass and
guitar blaring out the same. Well, the characters YYZ are
the beacon identifier for the Toronto International Airport.
The inspiration for the song came from Alex Lifeson, the
guitarist for the band, who holds a private pilots license.

Carter Bennett, KI5SR, adds that there is badly formed
Morse code on Kate Bush's album "Hounds of Love".
Carter informs me that the song "Watching You Without Me"
contains the code "SOS". It was also reported that this
track has some RTTY going in and out of tune. KI5SR continues
with information regarding the album "Saving the Wildlife"
by Mannheim Steamroller. He states that there is a track
on the album which sounds too much like "CQ" in Morse.

Charlie, N2JQA, says that there is Morse Code on
Ronnie Montrose's album (Elektra 1982 EI-60034) "GAMMA 3".
The song "Stranger" contains Morse Code which spells
"STRANGER".

Wayne, WA6MPG, states that in 1967, the band
"PEARLS BEFORE SWINE" recorded a song with an adult-rated
CW message in it. The song was titled "MISS MORSE".
The song is said to have vulgarities in it spelled out
with Morse Code. The album was titled "ONE NATION UNDERGROUND".

Randall, KE0YG, provided the following info about Morse Code
in the computer game called "RED STORM RISING" by Microprose.
Randall says that in the opening credits there is music
which contains Morse Code which spells out
"THE RUSSIANS ARE COMING" at about 18 WPM.
Randall says that he can confirm this on the C-64 version
and he believes that the IBM version plays the CW message
in the theme song.

Craig, VK3CRA, reports a TV show called "INSPECTOR MORSE".
Craig has never seen the show but, from info gathered, states
that the inspector's name is never given in the show. It is
alleged, however, to be contained in Morse Code which is played
as part of the show's introductory music.

Howie, N2WX and Mark, KM6XU, claims that "Radioactivity" by
Kraftwerk has lots of good Morse code in it. Mark also states
that the band Missing Persons has a song with some code in it
but Mark didn't supply any info on the song.

A message from John, NI6D, says that there is pseudo Morse
code in the song "Radio Silence" on Thomas Dolby's album
titled "The Golden Age of Wireless".

Dave, N0DET, adds that there is code in the song
"Planet Claire" by the B-52's. In the intro to "Planet Claire",
a kind of Spy vs. Spy mood is created by the music,
and plainly audible CW. The Morse code says,
"NAKS DE CFH I I ZKR F13395 5156 AS 662 ....,", then fades
to music. Dave believes that 'NAKS' and 'CFH' are
commercial station callsigns.
More information pertaining to the code comes in from Ron,
VE3RYN. Ron says that "NAKS" should be "NAWS" which stands

for 'North Atlantic Weather Station' and "CFH" is a CDN
military ship/shore station located near Halifax, Nova
Scotia.

Michael, W9OJ, claims that the words "love you" are
spelled out in morse code at the end of the "Iron Butterfly
Theme" Iron Butterfly. This song is on their first album
"Heavy" and is also on the double album titled "Rare
Flight".

Ian, VK2IAQ, writes in with information stating that
the UK rock band 'Barclay James Harvest' has two songs
which contain morse code. Ian states that the song
"Nova Lepidoptera", a sci-fi song from the 1977 album "XII",
starts off with "UFO" repeated in slow morse code.
Also, the title track of the album "Ring of Changes"
starts with the title sent twice in morse code.
John Lees, the lead guitarist, is a licensed amateur operator
in the UK.

Bill, WA6ITF, reports some really good Morse code on
the CD "SEEK YOU" by Andrew, G3WZZ, and Lissa Huddleson.

Duane, KA9HKL, states that there is 20+ wpm cw in
"I Can Move A Mountain" by The Blues Magoos, The message
says "I can move a mountain", it is sent twice in somewhat sloppy
code. The song was origionally released on the Mercury album
"Basic Blues Magoos" #61167 in May of 1968. It can also be found on
"Kaleidescope Compendium" CD Mercury 314 512 313-2. A very 60's
psychedelic collection of songs. This band is probably best known for
"(We Ain't Got) Nothin' Yet".

Danny, K7SS, informs me that he did a tune on an album called the
SEATTLE SYNDROME in 1981. It was a compilation of local bands,
just prior to the grunge explosion in Seatte. The song was
"21.252" and was done back when 21.25 was the band edge of 15 meters.
It features some great JA pileups mixed with instrumental sax etc.
The group's name was "K7SS" and was a duo of myself and James Husted.

One of the more interesting examples of Morse Code in Music,
adds Chris AA9HD, is the song "Pencil Rain" by They Might Be Giants.
In the middle of this song, there is a bit of code that spells
"Ay, Ay, Ay, Ay, canta y no llores".
Translated to English, it means "Ay, Ay, Ay, Ay, sing and don't cry".
The name of this song is "Cielito Lindo", which means
"Pretty Little Sky."

Well, that's about it for now. Thanks to all who have provided
me with information on this subject and thanks to all who
have inquired abt the subject.

I'm sorry Glen, I just can't agree. Which part of the "qualification
process" is "complicated"?

1) The 2-year membership requirement?
2) The Tech-or-above license-class requirement?
3) The residency requirement?
4) The 5-signature petition requirement?

Since our very own state and federal electoral system has similar
requirements, I assume you must feel that running for state or federal
office is equally complicated, right?

I don't think the qualification process is complicated at all. I bet you
really don't think it is complicated either. Instead, I think you're just
looking for a reason to bash the League.

Sure does. CW is and continues to be the second most popular mode on HF.
That alone warrants continued testing. Yes, there should be a test for SSB
too, but in many cases the gov't makes some assumptions, such as that you
understand English/your native tongue (obviously a bad assumption in many
instances.) Furthermore, it is in the government's interest to promote a
common mode of operation. CW is that common mode. Third, the FCC implements
regulations based upon the wishes of the amateur public. Since the Amateur
public wants a code test, the code test remains.

>Furthermore, the continued insistence on this outdated and unnecessary

Blah, blah, blah. Its deja-vu all over again, folks. Yup. A message from the
mid-80's. Oh wait. Its 1997. It wasn't true back then, so it certainly isn't
true today either. 15 years have passed and the same old, lame, untrue
excuses still exist today.

>Witness the large numbers of licensed amateurs who HAVE passed Morse code
>tests, but nonetheless are opposed to continued CW requirements because of the

There is no requirement, codified at least, that you respond to any
emergency communication request. (You might argue that there is
an implied social contract, and thus responsibility, to do so.) Most
emergency management agencies want hams to stay home during emergencies.
Hams are generally not trained in emergency situations, they present a
potential liability, and more often than not get a "big head" because they
are running around with a shack on their belt playing police-authority-
wannabe.

Someone else wrote:
>Most hams here (or prospective hams) have the mistaken idea that

>what was going on in Santa Cruz.

naturally, there are certain situations or circumstances where emergency
comms will take place on HF. The bulk of tactical communications normally
occurs on VHF bands. 6 meters is good for regional tactical comms in
large disaster areas. HF is good for long-distance H&W traffic.

Mr. "Slime":

I've noticed that you haven't exactly gotten any ANSWERS to your question, so I'll give you an explicit one...assuming you want to calculate length of a resonant dipole for a specific frequency.

The formula is 468/{Frequency in Mhz}, which returns the number of feet for a resonant dipole. For example, to have a 20 meter dipole resonate on 14.200Mhz, the equation would be (468/14.200) = 32.96 feet.

Also, the ARRL web page www.arrl.org has a nice array of books you can buy, some on CD-ROM which will answer this question in MUCH more detail.

Good luck on your search.

I don't know which library Mr. Slime went to, but I doubt he looked very far. I'm sure I saw a copy of the ARRL Handbook (admittedly an older edition) at the Atwater Library, here in Montreal where Mr. Slime resides.

The Westmount Library had some handbooks (probably the ARRL, but definitely the Bill Orr one) years ago, and I find it hard to believe that they've trashed those.

I don't know about the other public libraries in the Montreal area, since I've not visited them. But undoubtedly if they had a handbook, one could get the information without being a member.

I find it very hard to believe that there isn't an ARRL Handbook at one of the McGill University libraries. I've heard complaints from someone in the electronic industry that people who have just graduated from electronic engineering know all the theory, but lack practical knowledge. The Handbook might help to address that problem.

There used to be an amateur radio club at McGill. It disappeared, but I'm sure I've seen indications that a lower visibility club is in operation there once again. That too might be a place to look for a handbook.

The Concordia Amateur Radio Club is one of the more visible clubs in the area. That too might be a place to look for a copy of the Handbook.

There was a hamfest here at the end of October, and I saw a number of older editions of the Handbook for sale, and the price was right. They were older editions, but as someone mentioned, theory and basics doesn't change much as time goes by.

If the Arrl Handbook, or indeed any book about amateur radio, is missing from the libraries, then maybe it's time to do something about it. While the Handbook is predominantly about radio, it is also a good intro for people starting in electronics. A library without a Handbook is indeed a "sorry" library, not simply because it ignores amateur radio, but because it may be trying to provide what people want, rather than being a depository for information that people might need.

I hope after Mr. Slime visits some of these places I've mentioned, that he reports back on where he found copies of the Handbook, and where he didn't, because then we can address the problem of getting Handbooks into the libraries that are lacking.

If we're going to allocate special testing elements to MODES of operation, we
better start testing for digital, packet, spread spectrum, etc. In fact,
testing for any of these modern technologies would make a whole lot more sense
than Morse code.

>Furthermore, the continued insistence on
>this outdated and unnecessary

I am a president of the club. I was the one who wanted to recreate
the club. Visit http://www.vub.mcgill.ca/clubs/amateur/ It's a
club home page. I posted some posters to advertise the club
(well... I spend time and $$ to do this) and set up the meetings and
etc., but no luck. We had a few people who were interested in
getting the license, but they haven't completed the "basic" yet.
The students are typically busy and they aren't interested in studying
and learning and challenging something when other ways of methods are
available to you (communication).

By the way, I created a basic study guide for those who wish to obtain
canadian amateur basic license
(http://www.radiotelephone.net/amateur/study.pdf).
I see at least 10 downloadings occur each day, but I haven't received
"any" payments yet. I realize that many people are ignorant, and
that's the real problem for the ham community today. We are too
ignorant.

>I hope after Mr. Slime visits some of these places I've mentioned, that

True, but the typical write-in candidate against someone who's
name is on the ballot only wins in very rare circumstances.
In any case, I agree that ARRL elections should also
make an allowance for write-ins.

I can't comment on that as I don't know what the qualification
process is.

agreed completely !! good job !!

yeah, some say emergency communication but who uses CW for emergency
communications nowadays ?? the ships don't use it, the aircrafts
don't use it, no one uses at all.

I believe that the knowledge in digital signals are much important
than the knowledge in CW. Keep up with the technology !!

I would like to adjust the frequency to line up with the display
meter? Presently transmitting and receiving off 300 hz
and would like to line it up. I only have the owners manual and don't
have any idea which pot to tweak it back in line? All other modes are
good just the usb.
So if anyone is familiar with the adjustment please give me any info you
may have on this annoying problem any many thank's to the effort..ps
the 735 is a neat radio and i don't want to make any wrong adjustments
and upset the rest of the function's 73' ve3drx de Dave..

From: David Christensen <n9wil@ix.netcom.com>
Message-ID: <34A86604.26FDD082@ix.netcom.com>
Source record: 183033

I don't have the same rig as you, but the following has reduced my conducted and radiated noise to acceptable levels.

1. Try a ferrite on the video cable and the power cable. You can get a couple to try at RS but be careful with the rectangular ones they have. They have rather sharp corners if you wrap the lead too tight it may cut into the insulation. Try at least two turns thru the ferrite.

2. Route the cables in a different manner than you have now. Just the placement may be enough for your situation.

3. I have a copper screen (attached to radio ground via a copper strip) between my monitor and radios. Keeping the rigs and the computing equipment on separate sides of my computer hutch.

4. This may not be possible but I use separate outlets for my computing gear and the radio power supply. The grounds, neutrals, and hot are separate all the way back to the panel. The computer is also on a battery backup power supply which seems to cut down on conducted line noise.

5. Ensure your radios and associated ham gear are grounded per standard station setup procedures. Use the largest practical wire, or perferrably for RF grounding use a wide braid. Using the 6:1 rule (6" long for each 1" wide) has helped my noise also.

6. Use a dc power line filter from your power supply to the radios. You can homebrew this or buy one of several models. Be sure the filter is rated for the current you are drawing.

Hope this helps.

Dave N9WIL

I grew up in the '60s with Popular Electronics and loved the old Carl & Jerry articles. About 20 years ago I wrote to the author and he didn't have them (the magazine had all rights to the episodes). Would anyone have the series they wouldn't mind selling to me. I have quite a few, but would like to complete the collection.

By the way, I'm one of the "old-timers" (45 yrs old) who longs for the good old days when being a ham meant building a transmitter from a junked TV, and you were something special becaue we had radios in the car that could be phone patched, had portable handie-talkies and could talk to others around the country. Now with the internet and cellphones, everyone has that ability! Sorry, but ham radio has lost its charm for me!

6305. Thoughts on CW

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-29 00:00:00 UTC
From: Tony Degnan <tdegnan@sport4u.com>
Message-ID: <689vmq$k5s@ecuador.earthlink.net>
Source record: 183036

I am new to the Ham world and don't have my ticket yet. I have been studying for about a month now and won't be able to take my test until Feb.

I have been reading this dispute over code or no code. To me it seems sad that people who are suppose to be so helpful and kind would react this way to each other just because of their level of license. Sure I do believe knowing CW will weed out possible idiots on the HF bands. Myself at this time do not plan to get any license that requires CW. It is not because I am against it, but I don't think at this time I need it. I will first learn how to operate and use my equipment on the VHF and UHF bands.

I have listened to people with higher level licenses on VHF and some of them are idiots. I am a Police Officer and an EMT and spend a lot of time on the radio and you can't even weed the idiots off of them. I really don't see having a license with CW making a person superior to another. Maybe someday I will want to work the HF bands. When that day comes I will learn CW, but that won't make me a better Ham.

As a new person I think you all should step back and look to see what is important. To me it would be the hobby of Ham Radio. I am sure I will get people to agree with me and people who will call me an dot and that is fine. I just think you are all losing track of what Ham Radio is about with this fight over code no code. This is just my point of view and take it for what it is worth, so fire away I am a big boy and can take it.

I agree.

>73, and just my own opinions.
>Jim, KH7M

The only addition I would make to your thoughtful essay is that there =still= needs to be provision for the appliance operator who wants to do his/her thing without an extensive theoretical background above what is required to operate legally. We need these good folks for the critical mass they bring to the Service that allows =all= of us to do our own thing.

I have no desire to get in the code/no code debate other than to state I think code is an outdated requirement to operate HF, but we need SOME achievable barrier to instill pride in those who overcome it. Right now code serves that purpose and the current crop of multiple-choice written exams don't.

6308. Re: How do I get the power company to solve my QRN problem?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-29 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <34a7d307.13364029@news.sprynet.com>
Source record: 183039

Interestingly enough most people within the electrical companies and
radio regulatory bodies, if find, consider amateurs to be talented
enough to be able to handle most of their own noise problem.

If you find that you can pinpoint a noise source to a specific item, I
find the powers that be will then respond to your specific problem
source. However, to tell the power company that you have a problem
and ask them to find the source, they have much more important, and
productinve, things to do.

Greetings,

I have an ICOM IC-251A that has be tuned up ICOM. Comes with the manual, new desk microphone, and an IC-SM-5 desk microphone. Only $485 Shipped.

KENWOOD TS-520SE with hand microphone,original manual and carton. Excellent shape. Covers 10-160 meters minus WARC. Only $350 shipped.

KENWOOD TH-77A 2/440 Dual-Band Hand Held. Checked by Kenwood recently. Modified for extended transmit and recieve, aircraft/2m/440/800mhz. Includes KSC-7 Desk Charger, BT-6 Battery Case, Rechargeable Battery, orginial manual, container, and modification sheets. Shipped to your door for $295.

VHF ENGINEERING PA140/10 2 meter VHF Amplifier. Large heat sinks. No manual, obtained in a trade. Only FM mode. Shipped for $125.

KANTRONICS KAM PLUS, with Host Master II+ software, only $275 Shipped. This is my second KAM and very little use. MINT condition.

Radio Shack DSP-40 Digital Signal Processor, New in Box, Shipped for $60. One opened, used in excellent condition for $45.

TUCKER T-1000 300 watt Antenna Tuner, (same as Vectronics VC-300DLP), shipped at $120.

Looking for an HF AMP for 10-160 to include WARC/MARS. Will trade towards and depends on the model and age, include $$$ for the difference. Will consider 80A/B and Alpha amps -

Also looking for ICOM IC-706 radio with or without separation kit.

6312. No Code Bashers Read This!

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-29 00:00:00 UTC
From: kb9kyy@indy.net
Message-ID: <688ph0$933$1@news.indy.net>
Source record: 183043

I am just sickened by the "No Coders Bashing" Telling everyone that people who didn't learn morse code to get their licenses should not be allowed on the air. I am a blind, teenage ham, who cannot afford HF equipment, and I really don't want it. I wanted to get into ham radio to experiment in the UPPER bands, not HF. I don't want to get into something I don't like. That's everyone's right, and you no-code bashers are taking away that right. It'd be different if we took away the theory requirement and opened up ham radio like CB, we'd get all kinds of nutcases in here. You seem to be forgetting that us No-coders took the same theory tests YOU did.

Can't we all just get along?

High-powered "CB" radios masquerading as ham gear. They've been
around for a long time as "ten meter" radios, but never were offered
in real ham catalogs or stores until rules changes allowed novice and
tech operation on ten meters.

>>Have you ever used algebra in real life? Ever used any of the
>>Shakspere you had to memorize? Life is full of crap you never use.

Wow...I use algebra in real life every day. And some of the best lessons about life I've learned in the pages of Shakespeare. But more importantly, I learned that there is very little learned in a lifetime that is not usable in real life. Unless, of course you are not interested in either learning, or accomplishing anything.

What is on HF is what you make of it. And like most everything, it is a matter of understanding on a level that transcends the hot and the new. Ask anyone who has ever driven a classic car.

And then ask someone who drives one every day. Ods are, you will find that they are also the person who uses and appreciates algebra. And Shakespeare.

Hi,

Im a 14 yr old kid who likes astronomy. Right now im heavily into optical astronomy. I would like to get into radio astronomy. Im sure some people will say im crazy, but I would like a nice system that I could use to search for extraterestrial lifeforms. As of now I know nothing about radio astronomy. I would like someone so recomend a system for me, please be very specific. I dont have a whole lot of money so it cant be too much. Please let me know what it would cost. Also please tell me why the system you recomend would be good. Thanks a bunch.

I think the HTX-212 the 45 watt mobile is junk!!

I spend over 150% of the original cost to repair the radio.

I first spend $400 Cdn to purchase that radio.

Next month it was on sale for $329, I should of waited,

The radio last 3 months before it died.

Brought it in for repairs, not worth repairing after 3 months waiting.

No problem, I got a brand new radio for replacement.

Again, this radio lasted 6 months.

Brought it in again for repairs. This time the warranty ran out. So it cost me $120 to fix.

The CPU in the PLL went. No fault of my own.

Used it on the base, afraid of getting car broken into. I notice no one could hear me on check ins. Perfect match, lots of power, but no modulation!

So after two months bring it back in again!!

Waited four months. Replace more chips, at my cost, no labour cost since under repair 90 day warranty. Cost me an other $90.

So I had it for 3 weeks now. Tested out fine.

I only used it on voice, no packet.

I listen about 200 minutes for every minute transmitted!!

My old 2nd hand Kenwood TR-7800 works great, never had a program.

Here my brand new HTX-212 spending more time in the shop that actual usage!

I have a HTX-202, works great, along with my ICOM IC-02AT which I've been using 320 days a year since 1989.

no problems with voltage, or swr. So why did the HTX-212 fail me twice?

Both radios new and only used about 3 months each time.

So next time, buy the extended warranty for Radio Shack radios.

I used my gold Visa but the warranty was only a year.

Ted Lee

VE7LEE

never again to buy a Radio Shack mobile.

--

In the time you spend browsing through five web-sites,
one person is unnecessarily killed or maimed by a
landmine that's once every 22 minutes. These are mostly
civilians, often children, who accidentally step on a
landmine after a conflict has ended.

>RS did sell a 10 meter rig (HTX-100) a few years back. Fairly decent for
>about $200. But
>the market - I guess - was not there.

That's because these radios were USB and CW only. Great for amateur use, but worthless for freeband/CB operations which is what 99% of the buyers wanted it for. That's why it's upscale AM/FM/LSB/USB/CW cousin (the Uniden HR-2510) was so popular and the HTX-100 was not.

> a cheap TNC would decode it .. Anyone have the spec.??

520.83 baud.

A quick explanation is here:

http://www.thuneagle.com/same.html

I have not been able to find any "official" documentation yet.

A few commercial decoders:

http://www.htcnet.com/msftrncs/products/nwsamd/default.htm
http://www.hamtronics.com/rwx.html
http://www.thuneagle.com/

Dunno' why they chose such a weird, non-standard baud rate. I'm
sure there were political reasons...

Have fun!

Again, and as always, we thank you.

This ends the closed circuit with Newsline report number 1063 for release on Friday, December 26th, 1997 to follow.

<*>

The following is a QST

Is congress about to make sweeping changes to the FCC? One powerful Republican says 'yes' and it could impact ham radio. Find out more on our year end edition of Newsline coming your way right now!

<*>

Congress To Force FCC Reorganization

The future of amateur radio could lie with a single man in Washington. He's not an FCC official, but he could have powerful influence over how the Commission operates in years to come.

In two years, the FCC could be an entirely different agency from what hams and others know it to be today. That's the vision U.S. Representative Billy Tauzen has, and as head of the powerful House Telecommunications Subcommittee, Tauzen could make it happen.

The Louisiana Republican lawmaker came to prominence earlier this year when his subcommittee proposed legislation essentially banning scanner radios. In an interview in the broadcast trade publication Radio World, Tauzen says it's time to do away with the old and bring in new ideas at the Commission. Tauzen indicates he'll give the FCC a choice. Either reorganize on its own, or his committee will look into doing it for the agency.

As Tauzen sees it, the Commission's main problem is that it's organized around a 1930 government model promoting heavy federal regulation and monopolies to protect consumers.

But Tauzen says this is a different age. One of government opening up the marketplace to fierce competition and letting consumers be in charge. But Tauzen feels that the FCC still thinks and reacts the old way.

Tauzen's comments seem to suggest that the Commission may be in for another round of downsizing... or perhaps even more deregulation. With Tauzen leading the push, Congress could even take the FCC out of the business of regulating the airwaves, perhaps making the agency function as a spectrum landlord instead.

What effect all this could have on the amateur radio service is unclear. This is a time, though, when other services pressure the Commission for more freedom. At the same time, radio amateurs ask the FCC to hold back the hands of time. Hams ask for more rules instead of fewer. They demand stricter enforcement. And they sometimes indicate that they prefer older as opposed to newer technology.

What will the next generation FCC say to all of this? Those answers will evolve only as the shape of the new FCC becomes clearer.

The first steps toward reshaping the FCC could take place soon. Tauzen says if the Commission does not take steps toward self-reorganization, his subcommittee may begin work on its own during the 1998 Congressional session.

(Via Radio World Magazine)

<*>

Indecent Language Ham Recordings Wanted

A new ARRL Director who has vowed take hams who use indecent language off of the amateur bands says that he wants tape recordings of alleged offenders sent directly to him. Joe Falcone, N8TI says that he will use the recordings as proof to the FCC that the problem is nationwide in scope.

Specifically, N8TI is looking for good quality off-air cassette tape recordings that clearly demonstrate that a violation has taken place. The audio quality must be good enough so that anyone hearing the tape will recognize the language being used without the need to replay it a second or third time. This means using a direct connection to your transceiver or receiver.

Also, make certain to label the tape with the alleged offender's name. Include the location the transmission was recorded, the operating frequency of the station, the date, time of day and the name of the person who recorded it. Send these tapes to

Joe Falcone, N8TI
9614 Arden Ave.
Livonia, Michigan 48150

<*>

Hams Help In Wake Of Guam Typhoon

In the wake of Typhoon Paka, Hams on Guam helped relay damage assessments and kept lines of communication open between Guam and the Pacific islands of Saipan, Tinian, and Rota in the Northern Marianas.

Typhoon Paka hit the area on Tuesday, December 16th, causing heavy damage on Guam. Damage is estimated at $200 million, but no one was killed or seriously injured when the storm passed over.

Surprisingly, telephone service remained operational. According to Jim Kehler, KH2D, president of the Mariana Islands DX Association, the storm did wipe out commercial power and water supplies. He estimates that it could be as long as two or three months before commercial power is fully restored.

Kehler says that 7.085 MHZ continues to be used for inter-island communication. He adds that during the storm's approach, hams on Guam also used 7.085 MHZ to track its path.

(Via ARRL)

<*>

Low Level EMF Can Diminish Cancer Drug Ability

Low level electromagnetic fields found in some homes and offices can diminish or wipe out the cancer fighting ability of a drug called Tamoxifen. This is a medication which is used to prevent the recurrence of breast cancer. This surprising report is the result of continuing research conducted by Robert Liburdy. Liburdy is a cell biologist at Lawrence Berkeley National Laboratory.

The report in November 29th edition of Science News says that when the test tube samples under study were exposed to magnetic fields of 12 milligauss, Tamoxifen simply failed to fight cancer cells.

The story says that small areas of 12 milligauss are common in homes and offices. But even fields of 1,000 milligauss exist in these environments. However, magnetic fields of around 2 milligauss are not believed to be a problem to humans although there is no consensus on the affects that higher magnetic fields have on healthy individuals.

<*>

Rose Bowl Tower

If you are planning on running aero mobile at or near the Rose Bowl in Pasadena, California on New Years day, our advice is don't even consider it. This is because you will need to get special permission to enter the airspace from a temporary FAA control tower to be located at the Rose Bowl. The control zone is in effect on Jan 1, 1998 from 6:00 am to 7:00 PM Pacific Standard Time.

The FAA decided to put the tower in place because of anticipated heavy air traffic from law enforcement and news helicopters, and airships televising the Rose Parade and Rose Bowl game. Class "D" airspace will be in effect for a 4 nautical mile radius around the Rose Bowl from the surface to 3000 feet. Communication with "Rose Bowl Tower" will be required to enter the airspace. The temporary control tower will be physically located on top of the Rose Bowl itself.

(Via KD6KDZ)

<*>

April 1st Earthquake Drill

The state of California may hold a full blown earthquake preparedness drill next April 1st. The question is, will anyone believe the alerts when they are broadcast.

According to an advisory sent out by the California Office of Emergency Services, it has begun a series of planning meetings for next year's

Earthquake Preparedness Campaign. The OES asked broadcasters to publicize the annual "Duck, Cover and Hold" drill scheduled for Wednesday, April 1, 1998. The broadcast community has already agreed, but some are wondering if the selection of April 1st is a good idea. Several question whether the public would even believe a real earthquake alert on that day unless they actually felt an earthquake.

Ham radio emergency preparedness groups routinely take part in this practice event.

(Via various sources)

<*>

ARNS Contest Closing

Attention ham radio newsletter publishers. You have only a few days left to enter the Amateur Radio News Service Publication Contest. This annual competition which closes on December 31st, is to identify and recognize superior performance in Amateur Radio journalism and to evaluate club newsletters with suggestions for improvement.

To enter, clubs should submit one copy of any issue of their newsletter published between July 1996 and December 1997. Mail them to:

Lee Knirko, W9MOL
11 South LaSalle St., Suite 2100
Chicago, Illinois
60603

Deceased Vanity Club Apps

And club station trustees requesting the callsign of a deceased member as the club's station vanity callsign, should be sure to check 'Box 7D' on FCC Form 610-V. Make certain that you have a letter of consent from a close relative of the silent key. Then fill in the deceaseds callsign and the relationship of the close relative who wrote the letter of consent.

(Via ARRL)

<*>

North Pole Network

Saturday, December 13th, saw sixteen members of Nebraska's Ak-Sar-Ben Amateur Radio Club called into action by Santa Claus to activate the North Pole Network. As a result, 24 children at 3 area hospitals had a chance to visit with Santa and discuss their Christmas lists.

This is the 4th consecutive year that net coordinator Pat Joseph, N0HPP has organized the event. The North Pole Network uses an Amateur television

system that permits the children to see and hear Santa in their hospital rooms. They talk to him via amateur radio.

The hams used the K0USA 2 meter repeater and the WB0CMC Amateur TV repeaters to make Santa's live video visit possible.

(Via N0HPP)

<*>

Mir Crossband Experiment A Bust

Dave Larsen, N6CO, reports that a planed crossband Mir-to-ground experiment has been abandoned for now because of interference on 145.800 and 145.550 MHZ. A space walk to include a check and, if necessary repair the dual band antenna that might have been damaged, may be scheduled in the future.

Meanwhile, the Kenwood TM-733 transceiver on Mir has been connected to the spacecraft's SAFEX repeater antenna. U.S. astronaut Dave Wolf, KC5VPF, aboard Mir has been occasionally heard on 145.985 MHZ FM, operating simplex.

New Propagation Service Available For Amateurs

CAROS an acronym for the Coordinated Amateur Radio Observation System is a new web-based propagation service now available to the ham radio community. It functions as a co-op and is based on the principle of amateurs contributing radio propagation information for others to use. CAROS can be found on the World-Wide-Web at:

http://solar.uleth.ca/solar/www/caros.html

(Via CAROS press release)

<*>

DX

In DX, The Daily DX newsletter reports that DF2SS will operate from the Caribbean Island of St. Vincent through January 9th. He will be signing J8/DF2SS and plans to be active on RTTY and CW. QSL via DL2MDZ.

(Via Daily DX)

W6CAP says via the VHF Reflector that he would like to make some 2 Meter Meteor Skeds. He is located in Grid is DM 14 running a full kilowatt. Contact him by e-mail at:

w6cap@primenet.com

(Via Internet)

VE9AA reports that the artwork and pictures for the CY9AA QSL cards have been completed and sent to the group's QSL-card sponsor, WJ2O. VE9AA says that as soon as he has the completed cards in hand, he will begin filling them out.

(Via DXNS)

Be sure listen for the special prefix DU100 to be used during all of 1998. This, to celebrate the Philippines' 100th year of independence.

(Via press release)

<*>

January Lao DX Operation

And finally, this late breaking story just in. A special invitation has been extended to JH1AJT to attend the 30th anniversary celebration of the Lao News Agency slated for early January. In conjunction with the event, the nation's Anniversary Commission has granted permission to a team of ham operators to conduct a DXpedition to Lao from January 5th to the 13th. The operation will be all bands including 6 meters and RTTY. The calls to listen for will be XW30 on CW and XW30A for SSB, FM and radioteletype. QSL via SM0AGD.

(Via AH0W)

The Radio Shack unit HTX212 and the HTX242 is made by Maxon.. And no it cannot have any conversion done to it other then what it has in the book... If you can Find a 242 cheap enough then get it.. Otherwise a 212 will do.. the only Difference between the 2 it the 242 has 40 Memories and can store out of band frequencies that the 212 cannot.. Both have 136-174 Mhz Recieve but only 144-148 Mhz Transmitt.. at no more then 45 watts..
Hope this helps to clear it up.. None of the Ham Radios that radio shack sells was ever made by kenwood...

Dereck, congrats on being 14 and interested in science. I don't know
much about radio astronomy, so I can't be of much help, but I can
give you encrouagement. I think most work in this field is being
done with LARGE dish antennas and very high quality receivers. But
I bet you there is info out there that will help you get started
with a low budget setup.
I started in HAM radio at about 12 or 14 (I'm 59.5 now) by reading
mags and books on radio construction. Been building all kinds of
stuff ever sense. I learn so much reaserching a project and building
it. Taking old throw away radios and TVs and making them into something
I can use in the hobby is my hobby in a hobby. I've built several
telescopes over the years, (back when lenses were inexpenseve) got
most of my stuff from Edmonson, but their prices have gone out of
my range for experimentation.
A foot note to all this is that my wife gave me a Jason 675 X 4.5"
reflector scope Model 518s for Xmas. It's the first polor mount I've
ever owned. (now this is a learning experence).
Enough babble from an ol man, keep up the good work Dereck.

My 212 has been great no prblems at all and it does not have the desense problem my IC 229 has near the repeater. I also have a 202 that was a bit of a lemon. 2 times back to the shop and they replaced it. No problems. I do reccomend their extened warranty. I believe mine was 35 dollars for 5 years can't beat that. Its really more of an insurance policy than a warranty. If you bring in the remains of the dead radio twill fix/replace it. RS has been ripped on this because I know of at least one occasion of someone buying a dead radio and getting it fixed under another radio's warranty. This probably happens a lot.

Source record: 183204

Unusual ROBERTS 1725-8L III REEL TO REEL & 8 TRACK DUB DECK

A Very Unusual deck for 8 Track lovers. This unit was probably made by Akai is my guess for Roberts. Says Made in Tokyo Japan on it.

From the Back of the Unit it states:

MULTI-PURPOSE TAPE RECORDER

4 Track Stereo/Mono Reel to Reel
8 Track Stereo Cartridge
Transfer from reel to Cartridge

The unit appears physically in fair to good condition for its age. I do not have a power cord to fit the unit or manual, so I cannot vouch for its mechanical condition by testing it. It is best to assume it may need some attention. $50 or best offer.

Plus UPS Shipping costs which are not much. I'll pack it free and bring it directly to UPS to get you the lowest shipping rate.

You are probably going to get lots of responces so, be ready.
1. Many radios have 2 wire plugs. Consider connecting a wire, from the ground, chassis of your radio, to the ground pin of your house electrical system.
2. If you don't already use one, consider investing in a decent antenna coupler, even if your direct swr is close enough to 1:1.
3. You might have to use ohms law to get the correct value, but consider putting an bypass capacitor accross you a.c. line, possibly in the power supply as close to the a.c. input as possible. Without doing the math, something around 10 pf.

1/((2)(3.1416)(frequency)(c in farads))

Use this formula for both the a.c. frequency, 60 hz, and the r.f. frequency of 160 meters. You should notice a definite difference in the current flow through the capacitor between the two frequencies. The idea being that you want the a.c. frequency to see a very high resistance, actually impedance is the corrent word, and a low impedance to the r.f. frequency.

If you feel comfortable, you can email some of the other responces.

Well Dereck, the best way to get started is to get a vhf or uhf reciever and point a directional antenna toward the sky over time you can monitor galactic noise and you'll see a peak when you pass by the center of the galaxy. You can also build a downconverter and use an HF or shortwave radio. Even the most basic system will cost you at least $100 assuming you have a good shortwave reciever. Plus you need some fair experience with radio and RF to get the thing going.

If your looking to actually monitor 'signals' from pulsars etc you'll need equipment in the thousands of dollars, check out the book Radio Astronomy by John Potter Shields, Its an old SAMS publication but a good primer for you.

Well, in a round about way they do sell HF rigs.

Tech-America started selling the Alinco HF rig and they are owned by Tandy and I think you can order their stuff through Tandy.

In real terms I don't think there is anywhere near a big enough market for RS to start stocking and selling HF rigs. They are a high end expensive item that will not have a very high turnover so most of the stores will not want to stock them.

Sorry Ted the htx-212 was a lemon and was discontinued, although
I've never heard of anyone putting this much money into repairs on
one (and I should know, I'm the tech that repairs them here in
Nashville)

the htx-242 is not a lemon and is quite solid. BTW it is not made by
kenwood.

AL, you couldn't have said it better . if people really want something in this
world they need to work for it. 30 yrs ago they started the same trend with education in grade school.
by lowering the grade requirements, we now have kids in college who don't know what d-day is, or the battle at midway island, or something as simple as algebra....
all because some well meaning person was ashamed for forcing kids to learn some thing they will never use.
WELL, PEOPLE LIKE BILL CLINTON WANT THE REST OF US NOT TO WORK SO HARD SO THEY CAN TAKE CARE OF US.

if there's a shortage of hams cause no-one else wants to work hard for it, then i guess the rest of us will have to work harder to get the job done.
thats what made you hams in the first place, isn't it???

6356. Becoming a Radio Amateur

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-29 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <34A80F25.8B12B522@aloha.net>
Source record: 183222
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I think that becoming a Radio Amateur has NOTHING to do with knowing
CW Morse Code. It HAS to do with Natural Curiosity!! The people who
ought to become radio amateurs are not those who just want another
mode to communicate. No, POTS is so cheap now, radio amateur status
is NOT important to communicate (POTS = plain old telephone service).

The people who have been becoming radio amateurs for at least the
last 97 years or so, are the people who are CURIOUS about natural
phenomena!! They are folks who once, perhaps learned the names of the
stars
and constellations; or, maybe they collected mineral rock samples as
kids;
they loved the science course in Jr Hi School, or today, I guess
it is called Middle School! They went on in High School and took
algebra, biology, chemistry, and maybe even some physics and
elementary trig!!

What IS important is What Have they Done BEFORE they decided
they WANTED an amateur radio operators license!! Not what
they do after. That will take care of itself quite naturally.

The people who ought to be radio amateurs will WANT to learn about
radio science and all the history of the art. They won't be
afraid to learn CW Morse, nor have they been, nor are they now!
Look at the 2176 new Extra Class (20 wpm CW) license earners/upgrades
just in the first 11 months of 1997 (W5YI Report).

As for being required by law to pass a CW test to operate as an
HF SSB operator, I don't think so, but beefed up technical
and electronic theory tests, without published answers should be
mandatory. However, I know the US Gov. apparently by some
sort of legislation or Civil Rights law must publish answers for their
tests, but I disagree with this. And the tests should change
questions regularly -- oh, of course this idea will be screamed down
as unfair. Such unfairness arguments is what brought us the so called
objective multiple choice/ true-false tests of today. I also believe the

test should be about working problems, or writing down answers, no
multiple guessing available! But, this was argued as too subjective
on the part of the FCC Engineers who used to administer and grade
such tests during the long ago.

So, I believe the FCC ought to get out of the test make up
business all together at let it become a full and total function by
the VEC organizations. Yes, I know voluntary committees of

amateurs make up the test questions now, but somehow the
FCC is involved, and that should change so the amateur community
can make up and vary the tests frequently, set up the rules,
administer,
and advise Gettysburg about who ought to receive a license.

73, and just my own opinions.

Why buy a book for antenna length ?

There is a down loadable program at my web site which will calculate,
and show a crude picture of, the basic wire antennas plus a couple of
not so basic ones and shows the formula.

It also calculates placement and length of a 1/4 wave matching stub,
plus a couple of other things.

> can be bought?

As others might have mentioned, this is old technology. NOAA will
eventually be doing away with the 1KHz tone, going instead to the digital
databursts that specify a certain county or counties. That way, warnings
are more effective and earmarked for just a specific listening area.

Radio Shack was the only distributor of the new radios, but some others
are coming out on the market very soon. Save up your pennies, they're not
going to be cheap ($70 or so), but they'll be worth it.

Have fun!

Rob,

Having QRN problems with a power company can just about drive a ham operator crazy. I know, I've been there. Your posting leaves out some details, so I'll just tell you what I did to overcome this problem.

Some years ago when my QTH was in the Chicago area, I started getting +20db/s9 noise whenever my beam was in a southern direction. This noise seemed to be worse after a rain or during heavy fog. About 1,000 feet south of my home were some high voltage lines comming directly from one of Commonwealth Edison's steam plants. Also, after a rain you could hear a "singing"' noise comming from them.

I called them and could get nowhere. Customer sevice told me I would have to contact the FCC. At one of our club meetings I brought this up and found that several other hams had problems in the past. They told me to contact the Field Operations Manager. It took some time but I finally got through to him. I explained my problem (in a very diplomatic way) and he said he would look into it.

Several days later I noticed 3 or 4 service vehicles from the power company under the lines directly accross the street from my house. A few days after that I noticed them replacing one the huge porcelin insulators. Another day or two went by when the Field Operations Manager called me and asked if I was still having problems. I told him no and he informed me that the insulator was the problem. I didn't have this problem again for the several years afterward I lived there..

I don't know who you talked to at your power company, but if there is a Field Operations Manager, you need to get in touch with him. He should be well versed on his obligation to see that the power company is not causing interference. Whatever you do, don't loose your cool. Be diplomatic. You need them to correct the problem.

>I have a trerible rfi problem. The RF is getting itno the electrical
>system of the house. For example, when holding a field strength >meter near
the wall recepticles or a light switch, it registers alot >of RF.

Anthony,

My first question is: Are you sure this is a terrible problem? Apart from
the above, what symptoms do you see? Is it surprising that when you couple the
large antenna system that is your house wiring into your field strength meter
that you pick up a stronger signal?

Assuming that you really do have a high field strength problem, you have to
find the source.

Consider how the RF could be getting there. There are only two possibilities;
Conducted and radiated. Consider them seperately.

Conducted interference would be the easiest to handle. You can wrap the power
cord around a ferrite core to form an RF choke. Shunt capacitors (.1uF or .01uF
are common choices) can be used as well to improve rejection, but this is
rarely necessary and it requires the extra effort of building a little filter
box.

Radiated interference is a bit more tricky. There are a large number of paths
to consider.

If the chassis is properly grounded, it shouldn't radiate any significant
energy. Do you ground to a sunken ground rod or the cold water pipe? Is the
ground lead short (less than 1/10 wavelength)? If you can't make it short,
remember to avoid ground lead lengths that are near odd multiples of 1/4
wavelength. Several parallel leads of various lengths can help avoid a resonant
ground lead.

Is your transmission line radiating? It shouldn't but certain mismatch
conditions (especially a balanced load on an unbalanced line) can cause the
lead-in to radiate. Coax can be wrapped around a ferrite core just as a power
line is, but consider that a diagnostic test rather than a solution. If ferrite
eliminates your problem, fix the antenna system.

Is your antenna radiating? Of course it is. Could that radiated energy be
coupling into the power line? How far is the antenna from the nearest power
line? Maybe you merely have to move your antenna.

Follow a systematic approach, starting by defining the problem, and you will
eventually sort it all out.

73,

Blake - WB4PLL

Typical of your kind. You can bang on that brass key at a zillion words per minute, but you couldn't compose a simple sentence free of spelling and capitalization errors if your life depended on it.

Band is wide-open tonight here in the Northeastern U.S. Hearing lots of outbanders with strong signals and good-sounding stations. The upper frequencies are particularily active; 27.755 is sounding good with all the April members. Also noticing lotsa outbander SSB traffic on 28.000-28.100. More outbanders than HAMBOS, in fact ;-)

6376. 12wpm CW = 8 baud

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-30 00:00:00 UTC
From: charles1@netcom.com
Message-ID: <charles1ELzM49.HD8@netcom.com>
Source record: 183050

CW
12 wpm = 12*5 cpm = 60 cpm = 1 character per second

BAUD
8 bps = 1 character per second (11 bps if you count start/stop/parity)

so
12wpm = 8 baud

Thought CW should be put in perspective. Life is to short for CW!

After following all the various arguments and emotions through this thread it becomes obvious that those that are so hot about a code requirement are essentially extremely
fearful that they might have to become really technically competent instead of memorizing
the answers of a multiple choice test and being able to tie their ears to their fingers without
having their brains engaged. If creating a much more technical exam and requiring all existing HAMs to requalify would get the retarded CBers (excuse me HAMs) off 75 meters then I might be interested in HF.

My 2 Cents

Well, let me see, I guess that you know nothing of the simple nature of signals sent through the air. Hmmm, the CW signals, when sent out can travel MUCH greater distances are easier to recieve and pull out of noise than the voice transmissions. Furthermore, the idea in Amateur radio is NOT to "get as many people in as possible" but rather sift through the ones that just want to MEMORIZE ?'s then get on the air and waste time and breath on a repeater/frq. when there MAY be a NEED by some one else. I feel there is a STRONG need for the Code to STAY with all the HF privilages... and yes this is coming from a No-code tech here in the US who WANTS to learn the code and take some lessons from the other more experienced Hams out there (whether they could be my younger sister, or my Great grandfather) to ME Amateur Radio is about learning knowledge and this great hobby and gaining privilages to be here when needed in an emergency.

could someone show me what the dedribed components would,
look like in schematic form:(Three components make the hardware:

comparator, PLL and XOR gate. take the discriminator's output from the
scanner tuned on freq and feed it to the op amp, tune the PLL for 10khz
and
run its output and the incoming datastream thrugh the xor.).

6384. Icom U12 conversion help????

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-30 00:00:00 UTC
From: miker <&miker@ethergate.com>
Message-ID: <34A8E7EB.5BD8@ethergate.com>
Source record: 183058
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur,rec.radio.amateur.homebrew

I acquired a small pile of high-band Icom U12 handheld transceivers and decided
to convert two of them into a portable repeater.
Got the frequency conversion to 449MHz. done, but can only get 1.7W at 11 Volts.
Spec sez 3W at 10.8V. No, I don't have an unconverted one that works left to try.

The manual shows same parts in the high and low band versions.
None of the tuning caps are maxed out. Poked around the coils with a tuning stick. Could make it worse, but not better. Even took out the T/R
switch. Gained a little.

Exact same output on two units, although the DC current drain was 600ma on one
vs 900ma on the other.

Hard to believe the 1mhz difference (449 vs 450) is costing me that much power.
Any ideas on getting the power up to 3W. I need all I can get. Yeah, I'll put
a bigger heat sink on the final.

Advice?
thanks, miker

You are correct. Roberts was the North American badge for Akai Electric of Tokyo. Roberts, as such, did not exist. It was a cover name for Akai. The quality is the same as all Akai products.

6388. Congress wants to de-regulate FCC

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-30 00:00:00 UTC
From: Greg Dean <n9nwo@gte.net>
Message-ID: <68ate9$p7l$1@gte1.gte.net>
Source record: 183062
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

This is from the 26 Dec 97 Newsline. Note that the author makes comments on hams being old fashioned. Newer services want more freedom than do we.

Congress To Force FCC Reorganization

The future of amateur radio could lie with a single man in Washington. He's not an FCC official, but he could have powerful influence over how the Commission operates in years to come.

In two years, the FCC could be an entirely different agency from what hams and others know it to be today. That's the vision U.S. Representative Billy Tauzen has, and as head of the powerful House Telecommunications Subcommittee, Tauzen could make it happen.

The Louisiana Republican lawmaker came to prominence earlier this year when his subcommittee proposed legislation essentially banning scanner radios. In an interview in the broadcast trade publication Radio World, Tauzen says it's time to do away with the old and bring in new ideas at the Commission. Tauzen indicates he'll give the FCC a choice. Either reorganize on its own, or his committee will look into doing it for the agency.

As Tauzen sees it, the Commission's main problem is that it's organized around a 1930 government model promoting heavy federal regulation and monopolies to protect consumers.

But Tauzen says this is a different age. One of government opening up the marketplace to fierce competition and letting consumers be in charge. But Tauzen feels that the FCC still thinks and reacts the old way.

Tauzen's comments seem to suggest that the Commission may be in for another round of downsizing... or perhaps even more deregulation. With Tauzen leading the push, Congress could even take the FCC out of the business of regulating the airwaves, perhaps making the agency function as a spectrum landlord instead.

What effect all this could have on the amateur radio service is unclear. This is a time, though, when other services pressure the Commission for more freedom. At the same time, radio amateurs ask the FCC to hold back the hands of time. Hams ask for more rules instead of fewer. They demand stricter enforcement. And they sometimes indicate that they prefer older as opposed to newer technology.

What will the next generation FCC say to all of this? Those answers will evolve only as the shape of the new FCC becomes clearer.

The first steps toward reshaping the FCC could take place soon. Tauzen says if the Commission does not take steps toward self-reorganization, his subcommittee may begin work on its own during the 1998 Congressional session.

Mekly Hendomme <tegman@whipsend.net> responds...

> I am quite sure you have been sniffing the lava flows too long. This is
> the most sensless bit of drivel I have ever seen posted on this topic.
> There is no need to comment on individual thoughts contained here, the
sum
> is thoughtless, misinterpretation of life, amateur radio and all else.

Are you serious??? How many out there entered amateur radio because
they said to themselves, "You know, I'd REALLY like to learn what this
Morse code stuff is all about?"

And how many, like myself. were curious about radio wave propogation,
the incredibly interesting, IMO, varieties of modulation, the circuit
design,
or were simply interested in communicating over distances using their
own personal equipment/station?

Sorry, but I'll vote for curiosity over Morse Code ANY day. And
God help the human race when we equate Jim Reid's "natural
curiosity" with "thoughtless misinterpretation of life!"

On the other hand, if you ARE correct, perhaps such fascination with
CW rather than a healthy scientific curiosity and an interest in learning
new things accounts for a good deal of the hobbies stagnation. Some of
you really need to get away from that Morse key and open your eyes.

>
>"Where's that big 'ol CB RAMBO??"
> "I wanna hear him TALK TOUGH!!"

About 4 or 5 years ago, the FCC conducted a "sweep" of outbanders operating between the 10 meter ham band and the 11 meter citizens band. Around 30 or so outbanders were cited and fined. Don't think for one minute that it won't happen again.

While this may be true to some extent with HF packet is it absolute nonsense when applied to any of the TORs. Your statement is even more absurd when CW is compared to any FEC technique.

When AO-13 was still in orbit we used to have a little contest called the ZRO test. Since the Phase III transponders are linear a ground station can send a progressively weaker and weaker signal. Using DSP and pattern recognition software ZRO particiants regularly copied signals decades below those detectable by ear.

If you feel CW needs such a vigorous defense pray continue to defend it, but please don't recycle all these old husband's tales about how CW "gets through when nothing else will" there are a bunch of us out here in cyber space that are bit too well educated to buy it.

Hey - where's that dumb 'ol CB Rambo? Trying to get a real life I
hope. And maybe trying to convince the FCC to just hand him an
amateur radio license because we all know he's not capable of actually
earning one - with or without the code. Hey CB Rambo - SCREW YOU!
Ham radio is here to stay - WITH THE CODE REQUIREMENT! Like it or not
little boy, you'll actually have to use your brain (or at least what
little you have) to earn your ham license. No one is going to knock
at your door and hand you one. Study like the rest of us BOZO!

6400. Hams missing the REAL issue

While you all scream at each other about code requirements, your hobby collapses in on itself. In about ten years, whether or not one knows Morse code is going to be a moot issue.

Rather than posturing about your code proficiency, or your refusal to learn it, you ought to take a good look at your hobby and try to save it while you can. Once the relative number of hams drops to a certain level, you can be very sure that your frequencies will start getting shaved off too.

LOGic5 and DXBase97 both look like contenders and are both Win95 apps.
I've ordered DXBase97 but haven't received it yet so can't say how
well it works. LOGic has a demo available on their website.

These are the only two true Win95 apps I know of so far; most of the
rest seem to be stuck in the DOS dark ages or are thorougly cheesy and
poorly implemented Windows apps.

Hi all!

Happy new year.

I would like to know if you can send me some very good radio planes (or drafts). I would like to construct my own radio (transmitter and receiver).
I&#65533;m a newbie in this so, it does not matter if the radio has just some meters range. The larger, the better..

Thanks in advance

PD. Could you forward this to other guys, if you can not help me?

OK Larry. I am not a perponant of CW, but, if CW was eliminated from the amateur radio tests the ham bands would be flooded with bull crap just like the 11 mtr. band.

I have been a Tech+ since 1974, I just can't get the 13 WPM down enough to pass the General.

Enjoy your New Year Holiday

Jim

Source record: 183080

I have a 706, which I bought new a long time ago. This morning on 2 meters, the receiver sounded fine, but everyone on the Chicago area repeater stated I sounded off-frequency on the input. I moved the transmit frequency up 5Khz, and all sounded good. When I moved it back to the normal input frequency, I sounded off frequency again. After a 20 minute period, the radio sounded like it came back on frequency. This was confirmed by three different people listening to the input frequency, not by listening to the repeater output. A call to Icom was interesting, but Gerd stated he hadn't heard this problem before. Any ideas out there? I have access to test equipment, but obviously, not able to see the problem while driving, hi hi. Frank KG9H

If the code is still such a great filter, explain the trash mouths on
our 20 and 75 meter bands....mostly extras....I do think we can find a
much better filter than learning how to be a human digital modem.

From: mlangen@earth.execpc.com
Message-ID: <68b900$jes@newsops.execpc.com>
Source record: 183085

Wisconsin State Representative Otte (and others) has just introduced a bill (AB 680) which states in part "No person while driving a motor vehicle shall be so engaged or occupied with the use of a mobile telecommunications device as to interfere with the safe driving of such vehicle or as to impede the normal and reasonable movement of traffic." Although the bill is ostensibly directed primarily at cell phones (and appears to be merely another attempt to legislate common sense), the language is pretty vague and subjective. I doesn't specify cell phones and doesn't define its terms.

Put another way, if you get involved in an accident and you've got mobile gear on board, are you exposed to additional charges? How do you prove you weren't distracted by the radio? Is just listening enough?

I, too, have been nearly run off the road by people trying to do business or arguing with a spouse on their cell phones. But this strikes me as a badly crafted piece of legislation.

6412. Re: Thoughts on CW

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-30 00:00:00 UTC
From: "James F. Chumbley" <chumbley@sj.bigger.net>
Message-ID: <68bgcs$95l@masters0.InterNex.Net>
Source record: 183086

That's very well put, Tony!

I personally operate only CW. It sort of evokes the mysteries of the old days of radio. And sending/receiving CW fairly fast is something that many of us enjoy because not everybody has gone to the trouble of (wasted their time in?) learning to do it. But my beard has mostly all white whiskers now, too. And I still play my old antique pump organ, the kind with the foot pedals on it to fill the bellows with air. These are still enjoyable for me.
But I sincerely believe that forcing people to learn CW in order to operate a voice-mode only station is very foolish. If a person wants to operate CW, then it makes sense to have him show that he knows how to do it well. Same for voice-mode operation. Same for digital modes. And television (my dentist actually operates fast scan full-color broadcast-quality amateur television!). By having the CW competence requirement in place we keep an awful lot of good people off the bands. Twenty-two years ago, I met a new guy at the place where I worked. He was very active in CB radio. When he found out that I was a ham, his very next question was, "What class of license do you have." When I told him it was an extra-class ticket, he frowned and said, "I'll bet you're one of those guys who's in favor of making every new ham learn the code, aren't you?" You should have seen his face light up when I told him that I wasn't in favor of that at all. I told him that I operated only CW but I recognized that it was an antique mode which doesn't appeal to everyone. Then I said, "Of course, if we spent just half of our noon hours practicing code together, you'd have your ticket by the middle of next month." He was sold! We did it, I gave him his Novice test, and he passed easily. He then went on to increase his speed so that he could pass the General test. He also passed his Advanced test shortly afterward. My buddy still doesn't operate CW, and I still operate almost no voice-mode at all, but we're both hams. Same thing exactly happened at a later job. This fellow, however, spends almost all his time operating through the satellites. But here again we're both still hams.
But the really important thing about all this, it seems to me, is that if I had said that everybody should have to learn CW, I'm sure that neither of those guys would be hams today. They still tease me about my antique mode and make jokes about when I'm going to get rid of my spark-gap transmitter, but it's all in good fun. All three of us are hams; we operate entirely different modes, but were still good friends, and the hobby is much stronger since all three of us are active in it.
CW has a great deal to recommend it. Best of all is that it binds you more tightly to the earliest pioneers and experimenters in radio. You experience exactly what Marconi did and what Hiram Percy Maxim, call sign 1AW, did in the earliest days of radio. And it is still true that CW can

often be a better mode to use to work stations that are far away. Many of them still operate only CW, as I do. You might find that you really enjoy CW, but then again, you might not. If not, you certainly shouldn't be forced to. After all, it's still just a hobby.
73 (that's good-bye and best wishes in CW),
Jim Chumbley, N6UF

This appears to be in conflict with his assumed preference for
de-regulation.

> In an interview in the broadcast trade publication Radio World, Tauzen says
> it's time to do away with the old and bring in new ideas at the Commission.

"Out with the old and in with the new" has been itself a very passe line
of thinking for some time. Also, it seems to raise red flags signifying
transfers of power and money. What credentials does Tauzen have to
evaluate the technical merits of "old" and "new" ideas at the
Commission? What are his political goals?

> Tauzen indicates he'll give the FCC a choice. Either reorganize on its
> own, or his committee will look into doing it for the agency.

Yes, power and money...little pieces of spectrum worth billions of
dollars each. Ah, free market economics at work.

>
> As Tauzen sees it, the Commission's main problem is that it's organized
> around a 1930 government model promoting heavy federal regulation and
> monopolies to protect consumers.

We don't want any of that (i.e., the part about "protecting consumers")!

>
> But Tauzen says this is a different age. One of government opening up the
> marketplace to fierce competition and letting consumers be in charge.

Yes, a 'new age'. Pretty soon it will be the year 2000. Some do not yet understand the logic that having three zeros in the year's date means we must change to all new paradigms, but Tauzen probably has the answer. Or does he refer to the Information Age (an independent phenomenon)? Does Tauzen even know what that means, other than the potential for political opportunism it might imply?

As long as you define "consumers" as those interests who wish to procure and sell back to us, at incredible profits, the sprectral resources that really belong to Consumers (big "C"), I agree with what Tauzen says "the government" is doing.

> But
> Tauzen feels that the FCC still thinks and reacts the old way.

Translation: They haven't allowed themselves to be bought out. The system still works. Not to say the FCC hasn't been crippled by overzealous downsizing.

>
> Tauzen's comments seem to suggest that the Commission may be in for another
> round of downsizing... or perhaps even more deregulation. With Tauzen

> This is a time, though, when other services pressure the Commission for
> more freedom. At the same time, radio amateurs ask the FCC to hold back
> the hands of time. Hams ask for more rules instead of fewer. They demand
> stricter enforcement.

Without an FCC, I would predict that more services than the amateur radio service would be demanding enforcement, and doing so much more stidently than the ARS is doing now! Those pirate stations in Florida made the commercial broadcasters pretty nervous. "Freedom" and "deregulation"? Think of what hams (not necessarliy licensed) could do with the cellular radio service, if they had the "freedom". Also, there are a few ham stations, unconventional as they are, that are still listened to by thousands of SWLers. The bulk of the US population may find them offensive. But FCC does not stop them, i.e., they by default have the "freedom" and deregulation already, to provide a sort of new age entertainment which lots of people seem to enjoy and many people hate (sometimes itself a formula for success on the commercial entertainment bands). These frequencies are a result of deregulation. Are they an example of the future as envisioned by Tauzen (who thinks he can really ban scanners!...seems like he has less understanding of what

technical people with 'freedom' could really do than anyone, much less
the FCC).

> And they sometimes indicate that they prefer older
> as opposed to newer technology.

But newer technology doesn't always mean better technology. To say that
'newer is always better' is a dogmatic statement and is not always true
when subjected to technical scrutiny. But Tauzen is a polititian, and
polititians are often dogmatic because truth is not always their end.
Dogma is a common means to achieve power and money but is almost never a
means to arrive at scientific truth. So, the statement is irrelevant at
best, scary at worst.

>
> What will the next generation FCC say to all of this? Those answers will

> for this hobby.

Take a look around Rambo... One of the fastest growing segments of our hobby is CW QRP tranceivers. NorCal, (Northern California QRP Club) has sold thousands of QRP CW tranceivers, the 38 Special a CW QRP rig for 30m sold 2000 units. Not to mention the 40A, Sierra, Cascade, totaling about 4600 kits! Not too shabby for a couple guys who wanted to share their enthusiasm for CW and QRP.

There have been a plethora of new manufactures crop up, all selling CW tranceivers:

Small Wonder Labs, Oak Hills Research, Kanga USA, S & S Engineering, Wilderness Radio and several more.
Most of which are less than 10 years old. I have a hard time subscribing to the thought of 'no future' if we keep CW as a requirement. You ramble on and on about the future of the hobby, I wonder if you've bothered to look at it in the present?

Hello dear OM and thanks to read my message.

I bought the Headphone with Micro HS51 from Icom recently. The
microphone jack is as follow :

Jack 2.5 mm

------------------- ------------ -------
------------------- ------------ -------
Ground 5 Volts Mic

Apparently this Icom Headset needs a 5 Volts DCC from the Icom walky
talky and my question is :

Have you ever tried to connect this headphone on another brand of
walky talky having no 5 volts in the ext plug ?

Many thanks for your help !

Humor, at this point. Characters like you that attempt to make deep
analysis and catagorize a large group by misinterpretation and lack of
understanding I do find some humor in.

>and what activities you pursue, or would like to pursue
> as a radio amateur.

I shudder at the thought of what inferences you would draw here.

All this analysis of peoples intentions and actions is silly. Your very
first statement that being a radio amateur has to do with natural curiosity
is a generalization that is mostly untrue. There are many, many reasons for
becoming a ham that have nothing at all to do with natural curiosity. I
would estimate that about 1 out of 10 hams I know have anything resembling
natural curiosity.

> BTW, there is no Mekly Hendomme listed by QRZ from the FCC data base.

Also BTW, there is no Jim Reid listed in Hawaii as being a qualified
Psychiatrist or Psychoanalyst.

this kinda thing can happen when your tranceiver doesn't much with the
antenna. I had the similar problem with HTX-242. After I
corrected the antenna line and SWR, the problem resolved.

we don't see any floodings because HF rigs are so expensive to buy;
not many people interested in using the radio as a communication tool
nowadays while other methods are available cheaper and more useful.

Pretty weak Rambo, the gentlemen makes a good point regarding applying yourself, disipline and compliance and all you have to offer is a grammar review? I like the part where you say 'Typical of your kind' I suppose non brass pounders are at a higher level of english composition than CW ops? Sheeesh.... How about a real argument Rambo instead of this petty bullshit.

Then let me explain. Without the code requirement, anybody with a little study time can get unlimited licenses. If you want to hear what ham radio would be without the code, flip through the 40 CB channels. A bunch of brain-dead dipshits with a pathetic lives and foul language wasting frequencies. If I had my way, the tests would be much more technical without the question pools being public. Also, there would be NO no-code tech licenses. If you have a strong enough desire to truly be an amateur radio operator, then study what is required. That way, those who truly have that desire to be a ham would become one. Those that didn't would not. Also, the licenses would only be valid for 5 years with a RE-TEST to keep it - not just a re-submission of a form. The FCC is way too easy in that sense.

You make the comment about CB here to stay with no license requirements. If they still existed, CB would still be popular, but with a lot less dickheads jamming frequencies, running 1000 watts with illegal linears, etc. You get what you pay for. If you invest your time and a little effort in learning all that is required for ham radio, you will get everything that is there to be had. If you don't, buy a CB radio and stay out of the ham bands.

From: spambuster@greeneggs.com
Message-ID: <68bnlt$913@elf.wang.com>
Source record: 183099

URGENT:
PLEASE FORWARD THIS MESSAGE TO ALL INTERESTED PARTIES.

Happy Holidays.

The Waltham, Mass ARA, needs your help.

Christie Aponte, WP4MTI, is an 11 year old girl from Puerto Rico. Her mom, Laura (WP4MSO) and Grandfather Earle Blizzard (OZ1LHH) originally hail from the New England area, and are well known to the ham community who populate the 146.64 Waltham MA repeater.

Four years ago, Christie, her mom and dad were injured in a horrible car crash. Although her parents escaped with broken bones, Christie was seriously injured and nearly killed. Her condition was so perilous that she had to be airlifted to Boston Childrens Hospital for surgery. She currently is confined to a wheelchair, and doctors are not sure whether she will ever walk again.

During her initial visit to Boston, Kathy Pate (KA1IYR) and Dave Crocker (W1TMO) befriended her, and did an admirable job of making her feel welcome in a strange city far from home. During this first visit, in spite of all of the stress and distractions associated with her medical rehabilitation, she passed her novice license, and began working on a Technician-class upgrade. She attempted the Technician exam with one of the Boston-area ham clubs, but missed her goal by a couple of questions.

If all of these problems weren't enough, a number of other events added to her already heavy burden.

1. Her three closest friends in this country, namely her grandfather, W1TMO and KA1IYR all passed away within a short period of time.

2. Her favorite dog that stood by her side during the first rehab period died while she was undergoing further surgery.

3. Finally, the family home was burglarized while her mom and dad were visiting her at Childrens'. The thieves stole all of the radio equipment that she inherited from her grandfather. This took Christie off the air, and isolated her from all of her radio friends.

This year, Christie is back at Childrens' for painful spinal surgery, and will most likely remain in the hospital over the holidays. In spite of all of this adversity, she still has a great attitude, and is dedicated to getting well again.

Seeing how her family has little time or money to replace the stolen radios, we've decided to collect donations to replace her stolen ham station.

I'm sure that everyone will agree that no child should have to spend Christmas recovering from major surgery in a hospital far from home, and we're hoping that our gift will let her know that she's not alone in this frightening battle. This gift will allow her to listen and talk to local hams using her mom as a control operator. In addition, the radio will hopefully help her to forget her injuries so that she can concentrate on passing the Technician exam to upgrade her novice license.

If you can help bring some joy to an innocent 11 year-old by contributing $20 (or any amount you choose), please mail a check or money order as soon as you can to:

Anne Weldon
KA1PON
14A EMMETT ST
Marlboro, MA
01752

Please include your name, callsign, address, telephone and an email address with your donation so that we can confirm the receipt of your generosity.

We will post full details regarding the purchase on the WARA web page. Any additional moneys collected will be disbursed in an appropriate fashion.

Please send questions to me at n1aup@amsat.org or leave a message with Joe, W1EK at 617-965-1750. Please postpone hospital visits until Christie is back on her feet.

Thanks, and Happy Holidays!

Kip

> vehicle or as to impede the normal and reasonable movement of traffic."

It's hard for me to see the effect of the provision if your quote is accurate and in context, because it seems to cover nothing that isn't covered already.

If you're in an accident, and you were negligent because you were "engaged or occupied" with the use of a "mobile telecommunications device", it seems to me you're just as negligent, and just as liable, without the bill.

If you're not in an accident, then a cop has presumably pulled you over. But if you're driving erratically in such a way that you're "interfering with safe driving" or "impeding the normal and reasonable movement of traffic" you should be pulled over, whether or not you're using a radio, right? I assume there are already laws against that sort of thing in Wisconsin. If not, there should be. If so, what's the point?

Oh, just my "natural curiosity showing, Mekly. BTW, did you know youre-mail
address does not work? Usually, when people talk about being
a radio amateur, they say they enjoy being on the radio to attempt to
talk to far away places, or perhaps to make new friends, you know
just ordinary conversation. Goes on every day on the bands, and
no one attempts to make "sweeping inference" of any sort, just
talk and conversation.

Some deep analysis!! Just wondered if you enjoyed DX'ing,rag chewing, digital
modes, etc, you know the sort of stuff
amateur radio operators talk about every day on the bands, sort
of satisfies some of our "natural curiosity",
I suppose, or is it just part of being human to talk about things?
Don't know, just goes on every day on the bands.

>
>
> >and what activities you pursue, or would like to pursue

How about stating a few that you have found; maybe, public service
in emergency situations, or handling traffic in nets, collecting QSL cards
from
all over the world to earn various achievement awards, etc., etc.

> I
> would estimate that about 1 out of 10 hams I know have anything resembling
> natural curiosity.

Several who evidently have curiosity have also responded to my post,
supposeyou have read them and had other good laughs.

>
>
> > BTW, there is no Mekly Hendomme listed by QRZ from the FCC data base.
>
> Also BTW, there is no Jim Reid listed in Hawaii as being a qualified
> Psychiatrist or Psychoanalyst.

Not sure why you would believe I would be!! See my comment above aboutwhat
radio amateurs usually discuss in typical QSO's.

Wonder why, as a radio amateur you are so reluctant to give a call sign. I
still
find your responses amazingly unusual. What is strange to me, is this: I
stated
my opinion, and you come back stating that my opinion is not worthy of
comment,
then proceed to sum all as "thoughtless, misinterpretation of life, amateur
radio and all else."
to quote from your first response to my post. Certainly a sweeping analysis of

my views, isn't it?

Seems you, Meckly, are attempting to be the analyst from your opening line:

"> I am quite sure you have been sniffing the lava flows too long. This is
> the most senseless bit of drivel I have ever seen posted on this topic."

Jim, KH7M
On the Garden Island of Kauai; no lave flowing here for a few million years,
they say.

CB or 11 meters is crab because no one gives a daman about it. I kind of agree we may miss it if we totally eliminate CW, I just don't buy that ham bands will become like CB especially if the ham community in general doesn't tolerate any foolishness. Unlike CB there are licenses that can be looked up and the individual advised in writting how the ham community doesn't like a particular thing the operator said, and if it's serious enough the FCC could be made aware of it. I would have no problem with local more experince hams becoming part of a renewal process much like the VEC ythese hams would beforwarded all complaints, and complements about a particular ham and if the operator had more than a few bad operator reports for a given time maybe he this board would recommend that the license not be approved for renewal.

This would be failry agressive and have the potential to really be abused but ham radio has always been self policing, so why not continuing the tradition by having something like I mentioned above. My idea may not be workable but something like it might be with out getting the FCC involved. Just a thought.

bravo!
You are absolutely right, and many of the older hams who have been carping about the demise of ham radio because of the no code couldn't even copy their own calls at 5wpm if their life depended on it. Although I am a ham and have been one for about five years now, I have stopped listening to even the ARES net in my area becasue of the way the old timers run the nets and aren't tuned into reality. I also hardly if ever turn the radio on except druing a weather event because most of the idiots on 2 metters have little if anything to say. Besides many of them use it for telephone patches. just cheap cellular.

But I agree whole heartedly in what you say.

6435. TRUNKER for Windows, any interest?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-30 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34c97a0e.866035563@nntp.atlanta.com>
Source record: 183109
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc

OK, I have a question for you scanner-heads out there. Would people be interested in a program similar to TRUNKER that runs under Windows?

Here's the issue: TRUNKER works by putting the PC timer into it's highest resolution counting mode. The data from the slicer causes a serial interrupt. In the interrupt routine, the timer is read. Based on interrupt frequency, etc, a bit clock is derived to demodulate the data.

In Windows, a user application cannot be guaranteed the amount of time from when an interrupt occurs to when an interrupt is serviced. If the OS is in ring 0 (in the case of NT), it might be a number of milliseconds before the interrupt gets handled. Obviously, if the serial interrupt routine reads the timer, the timer will have elapsed some additional amount of time that cannot be determined. Thus, it ain't gonna work.

How to solve this: MicroChip (the PIC people), make a little 8 pin processor (the PIC12C508). It would cost virtually nothing to take one of these parts and in conjunction with the existing data slicer designs, build a little widgie that measures the amount of time between data transitions, and send this serially to the PC.

This would allow just about any machine that can handle a 115200 baud serial data stream to run software capable of decoding the control channel (to get 115200 baud, we know that the Motorola SmartNet control channel runs at 3600 baud. Since we need to send 2 8 bit words to represent the bit state and the number of microseconds since the last change, we get 3600 * 8 * 2 = 57600. We also know that a serial character has a start and stop bit, so the actual bit rate is 3600 * 10 * 2 = 72000 baud. And we most likely want to use the next high *standard* rate, thus, 115200)

But, you may say, most PCs can't handle 115200, sustained. My experience says this is usually a result of poor serial drivers, although on an IBM XT, it's a true statement. And, we're not getting a sustained 115200 rate, we're getting 7200 character per second, with characters being sent at 115200.

If the Windows applicate is written properly, it would also be COM port independent, i.e. it could run on COM1 thru COM10 (assuming you have a RocketPort, or other multi-port serial card).

I'd be interested in designing the adapeter, if someone want
to take a shot at porting or writing a TRUNKER equivalent for Windows
(in Visual Basic, preferrably, Visual C++ as second choice).

Help me on this... How much is Phil wanting in US Dollar??? I think I paid $350 back a year plus ago, from someone local and wanting out for a new hobby... Then I added the tone board from someone else who never installed it for (I think) $50... It is the American version, did I do OK??? It makes a great radio and I'm happy. I haven't looked to see what the stores are wanting for a used unit...

I have a mint yaesu ft-101zd that is no longer being used. This model
has the built in digital display, orginal manual, mic, matching speaker,
500hz cw filter, 100 watts on 10mtr, 145 on 160mtrs.
Also, I have a Yaesu fl-2100 amp mated to the ft-101zd. Amp does
500watts on cw and is strong, solid and also in excellent condition.
Still has the protective plastic cover on the face.
Asking $400.00 for the ft-101zd and $400.00 for the amp, trade is also
possible.

I've found that use of insulated wire will shorten the wire and reduce
the bandwidth, especially in loop antennas due to the capacitive loading
contributing to the dielectric of the insulation.

A farmer had a plow horse that had a rather long mane. The problem was,
birds continually built their homes in the horse's mane and the horse
never got any sleep because of the noise the birds made. The farmer, in
fear of losing his only work horse, consulted the old country vet for
advice. The old vet advised that the farmer sprinkle brewer's yeast in
the horses mane for 3 days. By the end of the 3rd day, all the birds
were gone. Seemas the old vet was following the ol' country remedy...

yeast is yeast and nest is nest and never the mane shall tweet

I have read a lot of posts on this newsgroup and have found a couple of people who are fond of the word "drivel". Like I said I am a big boy and new this post of mine would draw some attention. I can handle people's points of view for or against, but I bet you are the kind of person who no matter what is said will write something negative. Like I said take it for what it was worth. To me it sounds like you have an axe to grind.

This newsgroup is for posts like mine and I don't need to move to the nocode newsgroup, because like I said I am not for or against either side. As I can see you are a person who is in favor of people learning CW. But I think it is people like you who give Ham Radio a bad rap. What lead me to start looking into Ham Radio was the "rumor" of Ham Radio users being very helpful and kind to one another, something like a fraternity. After reading your post my thought is that you are not someone I would even want to come in contact with on the radio or in person.

I hope you read this so you can really tell me in your highly educated way how you feel.

Your becoming more bizarre with each and every post, what does no code on HF have to do with loosing a section of a VHF band? And why the hell would the FCC care if the ARRL endorsed code free licenses or not? If the FCC wants to create a codeless amateur license for HF, VHF or any other band they certainly don't need the approval of the ARRL. Where the hell did you come up with this idea?Some commercial interests wanted part of the band, they bid for it and got it. If you look at how much 220 is used it should be no surprize why we lost a portion of it.

The no-code tech license was going to attract all these great RF engineers, microwave specialists and the like who would have got their ticket except for that damn code. Where are they? Where is the huge influx of new operators who would save us from our demise? Clearly not on 220, a band they could operate on. So much for the no code tech license saving our hobby, and now you want the same for HF eh? No thanks Rambo, I'll take my chances by keeping the CW requirement.

> ps i think he was talking duplex, but im not sure. DANO

Yes Dano it is as simple as a 'couple of radios' but a little deeper by the time you put it all together. First you need to know what a repeater consists of. Basically it's a reciever who's audio is sent directly to a transmitter who's frequency is 600Khz up or down the band. (assuming a 2m repeater) Old Motorola and GE tranceivers used for mobile communications weren't really trancievers but a separate transmitter and reciever in the same box, crystal controlled usually and very modular. Many repeaters were built using just one radio! The TX and RX were removed, retuned to the appropriate ham frequencys and then connected to the appropriate control logic. Some additional circuitry is required to sense when the squelch is broken on the rx, when this happens the switch is closed to key the transmitter, nevermind all the beeps, recordings, timers and digitalker identifiers these are just bells and whistles to make the repeater sound nifty. A simple repeater could be a 1/4 ground plane, duplexer, transmitter, reciever, and some VERY simple control circuit to key the transmitter and provide a timeout in the event of a transmission over 3 min long. This was basically the set up we had at the University, it provided lots of fun and the opportunity to experiment with different receivers etc. The duplexer would not be required if you could separate the transmitter from the receiver, many systems have a receive site (for 2m) the audio would then be sent out on UHF via a small 1 watt transmitter to the transmit site perhaps a mile or so away, at the transmit site there is a UHF receiver that then puts the audio into the 2m transmitter, by using this meathod you can have multiple recieve sites. Hope this gives you an idea of what its all about.

6451. Going to Dayton

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-30 00:00:00 UTC
From: Dennis Jacobson <n6ng@sj.bigger.net>
Message-ID: <34A9EAB2.575A@sj.bigger.net>
Source record: 183125

For once in my life, I've decided to go to the Dayton Hamvention...
I guess it's was one of those things you hear people talk about and
say to yourself, " before I can't travel, I've just got to go to Dayton
one time.."

But now that I've decided to go, I find that there is "no room at
the inn". And in any other case, (especially at this time of the
season) it wouldn't bother me, being in good company. But if I don't
go in '98 I'll probably not try this trip again...

So, does anyone have any suggestions of where to stay in or around
Dayton.. the hotels that I've called are all full... I've also
looked though the Internet pages for Hotels, Motels and even
RV rentals and campgrounds... Not knowing the area , I'm hoping someone
can point me a sleeping location... Anyone know of a barn that hasn't
been rented?

Thanks for any direction...

Dennis, I've always made my reservations 3 or 4 months in advance to Dayton and never had a problem getting a room. You can contact DARA the Dayton Amateur Radio Assn and they will assist you in getting a room. If you still have no luck drop me a line you can bunk in with the NERTS, the New Era Repeater Technocrats. A motley crew from several states in the midwest.

I'd love to, since you speak with quite a bit of authority on the FCC and how they 'warned hams' please site the FCC documents that you have obviously read so I can do the same. Im still a little confused though, we accepted a no code licence and lost the spectrum anyway on the other hand the HF portion was increased with some bands being CW only. This sounds somewhat contradictory to your argument of the FCC warning hams about not accepting a no code license.

Ed Legenza wrote: "Most hams (or prospective hams) have the mistaken idea that emergency communications involve V/UHF FM work only."

How true, Ed. We just heard from Jim KH2D about how *only* HF was used on the island of Guam during the aftermath of Super Typhoon Paka (230+ mph winds). No 2m simplex was used, no 2m repeaters were used, no 70cm simplex was used, no 70cm repeaters were used. Only HF.

With the frequency that Guam gets hit by typhoons, those hams have enough emcomm experience to know better than to rely only on V/UHF.

Does anyone have the e-mail addreses for people who are high in the corporate structures of companies like Kenwood, Yaesu, and Icom? I am not very good at sending printed letters, but I am excellent at e-mail correspondence, and would like to try that approach.
Many ham radio operators are elderly, and will soon be starting to loose vision. They will want accessible equipment with speech synthesizers included. Mobile radios should also have speech output, so that hams who are driving will keep their eyes on the road instead of their radio.
There are many good reasons for companies to make their radios fully accessible to those who need to use them without the benefit of sight. Providing such features is the correct thing to do, no matter how one looks at the situation. Please help me find the e-mail addresses of the important individuals, and I will be glad to start the process. Thanks.

Hello,
In my humble opinion. The self policing was intended to happen at the individual level. The individual amateur understanding an respecting the regulations, with those in a local peer group applying the necessary pressure to curtail poor operating. 75M and 14.313 aside, all in all the amateur community DOES do a fine job of self policing. The other communities of individuals that I can think of who have done as well using peer pressure are the Hunting and fishing groups Any other policing should have to be at the done by those who have the lawful authority to enforce, the FCC. any thing else will be vigilante rule.

Greetings,

I have an ICOM IC-251A that has be tuned up ICOM. Comes with the manual, new desk microphone, and an IC-SM-5 desk microphone. Only $485 Shipped.

KENWOOD PC-1A Phone Patch Controller with manual and four pin adapter if needed. Good condition, shipped for $60.

KENWOOD TS-520SE with hand microphone,original manual and carton. Excellent shape. Covers 10-160 meters minus WARC. Only $350 shipped.

KENWOOD TH-77A 2/440 Dual-Band Hand Held. Checked by Kenwood recently. Modified for extended transmit and recieve, aircraft/2m/440/800mhz. Includes KSC-7 Desk Charger, BT-6 Battery Case, Rechargeable Battery, orginial manual, container, and modification sheets. Shipped to your door for $295.

VHF ENGINEERING PA140/10 2 meter VHF Amplifier. Large heat sinks. No manual, obtained in a trade. Only FM mode. Shipped for $125.

KANTRONICS KAM PLUS, with Host Master II+ software, only $275 Shipped. This is my second KAM and very little use. MINT condition.

Radio Shack DSP-40 Digital Signal Processor, New in Box, Shipped for $60. One opened, used in excellent condition for $45.

TUCKER T-1000 300 watt Antenna Tuner, (same as Vectronics VC-300DLP), shipped at $120.

Looking for an HF AMP for 10-160 to include WARC/MARS. Will trade towards and depends on the model and age, include $$$ for the difference. Will consider 80A/B and Alpha amps -

Also looking for ICOM IC-706 radio with or without separation kit.

Fortunately, this isn't me this year, but several years ago, it was...

Throwing caution to the wind, heading to Dayton without reservations.

It's a good reason to be an active ham. If you head out there, you
will surely meet up with at least ONE person you know who will
be in a position to share a room with you.

Alternately, hotels DO have cancellations, even for Hamvention.

I always tell friends who waffle because they don't have room reser-
vations,

"Just go, get the experience, enjoy it, and we'll find a place for
you to sleep, somewhere, somehow."

And hams are hams, and it never fails.

Of course, I now make my reservations upon departing from the hotel
at the end of Hamvention...I have learned :)

BUT in an attempt to preserve the enjoyment of others who didn't
have the foresight, or the experience to know to do this, I
always reserve four rooms.

Just looked in the ARRL rule book, yes the Amateur Auxillary is still
with us,according to my 1989 edition book, my newer one is out on loan.
With the FCC underfunded to the point it can't act one evidence
collected by the auxillary, I think the auxillary is rendered toothless.
Oh well!?!, just have to suffer the fools, I suppose.My previous

> Thanks Greg

The display in my TS-820s would show random character segments and/or lock up. The best solution was to clean all the multipin connectors that run to/from the display board and to hard-wire a ground from the display board to the power supply. The pins in the connectors oxidize and can be cleaned with a pencil eraser and a SMALL drop of DeoxIT* on the pins, then
plug and unplug the connector a dozen times or so.
I ended up doing all the multipin connectors in the radio while I had it open and I swear it
improved the sensitivity, the audio quality and the frequency stability.

* I used Caig D5, available from MCM Electronics and other places.

The National Radio Astronomy Observatory has an opening for a:

Receiver Engineer, Radio Frequency and Microwave, in Socorro, NM (SO2157).

Go here:

http://www.cv.nrao.edu/~tschlemm/public/job.html

and scroll down to the position listing. If you feel you meet the
qualifications the listing states where to send your resume'.

DO NOT RESPOND TO ME, the sender, I'm just telling you about it. I'll have to
pretty much ignore anything sent my way, but I will say it's
not a normal, run-of-the-mill RF job ;-)

You can check into what the NRAO does at:

http://www.nrao.edu

Try Cincinnati. It's about an hour away from Dayton. If you're flying, you may have to rent a car. There's shuttle service available at various hotels in Dayton, but I'm not sure anything goes that far south. If nothing is available in Cincinnati, then try Columbus. It's a little further, but it may be your best bet if everything is booked.

One of the problems associated with this kind of legislation is that no one thinks about the effects before hand. Not that would likely change the way things were done, anyway. Actually, many, many car phones offer options that include a "car kit" which includes a hands off speaker phone, remote antenna and RF power amp and a snap-in phone cradle. Employing such options in a car greatly reduces the likelihood of a crash, in my opinion, because it frees up both the driver's hands. At this point, talking on a car phone so equipped reduces the operation to a basic conversation similar to what one would have if the other person were actually in the car with the driver. I've been using a car phone for about 10 years with such an installation and have never felt I've placed myself or others in danger by talking on the phone when using the "hands free" system.

Why aren't more sold? Simple - people don't want to pay for it and in many cases the phone sellers don't offer it because it costs signifcantly more to do a full blown installation. So much for safety concerns.

We are sending this message of support to several news groups.
One of our deputy administrators is a radio ham. He has called
to our attention the collected writings of Carl Stevenson. We
feel that a man of such vision needs our support and praise.
We want his message of freedom from rules to be heard by all who
labor under the thumb of oppression. His message to radio operators
applies equally to life in Amerika. Life under rules imposed by
fat-cat, Jew-boy "Professionals", who, by the use of wealth and power
keep the common man in chains.

Carl's stance on relief from oppressive FCC morse code requirements
for radio hams is a breath of fresh air. He is an example of the
true courage necessary to throw off the chains of stifling rules
and regulations imposed by the wealthy Fascist elite.

For his bravery, Carl has been threatened with death, stalked by
militiamen, and had to seek FBI protection. Where has freedom gone?

We have compiled all of Carl's writings from Deja News, and furnished
copies to all our members. He has inspired us to utilize ham radio
to bring our message to the entire world. We will soon begin broad-
casting on 3.500, 7.00, 10.00, 14.00. and 21.00 megacycles. Please
tune in for our message of revolution and rebirth. These messages will
be amplitude modulated transmission, NOT MORSE CODE!!!!!!

We urge you to visit Deja News and search on "Carl Stevenson" We're
convinced his courage in the face of danger will inspire you to throw
off the chains of control and requlation and be a free man as God intended.

There are others like Carl out there. When we bring enough of these
like-minded persons together, we will rise up -- rise up and dominate!

: It's hard for me to see the effect of the provision if your quote is
: accurate and in context, because it seems to cover nothing that isn't
: covered already.

: If you're in an accident, and you were negligent because you were
: "engaged or occupied" with the use of a "mobile telecommunications
: device", it seems to me you're just as negligent, and just as liable,
: without the bill.

: If you're not in an accident, then a cop has presumably pulled you
: over. But if you're driving erratically in such a way that you're
: "interfering with safe driving" or "impeding the normal and reasonable
: movement of traffic" you should be pulled over, whether or not you're
: using a radio, right? I assume there are already laws against that
: sort of thing in Wisconsin. If not, there should be. If so, what's
: the point?

Well, your absolutely right, except for one thing: the proposed law would add ANOTHER potential charge in an accident situation which is solely related to radio use/abuse. So, not only could you be cited for inattentive driving, you could also be looking at exposure to a separate AND ADDITIONAL charge, points and $400 fine if the cop concludes the radios were a causative factor.

Let's get down to the REAL issue here. There are people who are incapable of learning code and want the FCC to revamp the rules so they can get ham licenses. In a sense, they got what they wanted - a no-code tech license. Fine. Now they want CW abolished completely so they can advance further. That's where I have the problem. Everyone so far had to learn code to advance in license class. Why in the hell should we make an exception for those who won't invest the time to study the code. It makes no difference whether or not you think the code is old and useless - it is still a requirement. Like it or not, if you want to advance, you will have to learn code. CW is not going anywhere - no matter what you hear. So, again let me state - if you have the desire to advance in ham radio. learn the code like everyone else has and as the requirements say you have to. If you don't have enough desire to learn the code, you don't deserve to be on those bands anyway. So, kids, the choice is yours......

wrote:

>>Then let me explain. Without the code requirement, anybody with a
>>little study time can get unlimited licenses.

why not make the people licensed ??

many people aren't really looking to use the radio as a way of
communication anyway.

I can ask if someone wants to have a full amateur license in Canada
(by no-test, no-fee etc.,). I should get at least 80% of people
saying "it doesn't do anything so I don't care."

>Then why is the failure rate about 50% on average for the
>many test elements given? ....according to W5YI data

What I hear from private examiners in Canada that the average score on
the Canadian advanced amateur exam falls around 40-50% which is
absolutely below passing mark.

>> If you want to hear
>>what ham radio would be without the code,
>> flip through the 40 CB
>>channels.
>> A bunch of brain-dead dipshits with a pathetic lives and
>>foul language wasting frequencies.

95% of JA/7J etc., stations coming from Japan on HF are NO-CODERS. I
hear that they are very polite. well... pro-coders should explain
why US coders (on 80m to say...) are not better than JA no coders.

>And not one of them even had to fill out a form to
>get on CB.

> CB is NO license at all. If code was the true
>protector of the amateur bands as you suggest then why isn't
>VHF/UHF anything like CB.

good !! yeah,. VHF and UHF emergency communications are disaster
eh... I guess they are better than HFs, but some people think
differently.

>Many of us suport more technical licenses and, in fact, the
>Novice and Technician question pools have been increased
>by 50% as of 7/1/97. As to public question pools... that's the

>province of federal law, not an FCC decision.

it is unfortunate that the MAJORITY of suggestion for cutting down the code requirement is coming from coders. pro-coders always forget about this.

>> Also, there would be NO no-code tech licenses.

sure. why not ? temporary one week license or something will do.

>> If you have a strong enough
>>desire to truly be an amateur radio operator, then study what is
>>required.

it's like saying if you want to survive under Nazi, do whatever Nazi says.

it's dangerous.

if you want to live in a certain country, pay whatever the government asks you to.

it's a dangerous thought.

I don't want to descriminate anything about Nazi system or any government or something, but I just want to have an example to illustrate what you are saying here...

>>You make the comment about CB here to stay with no license
>>requirements. If they still existed, CB would still be popular, but
>>with a lot less dickheads jamming frequencies, running 1000 watts with
>>illegal linears, etc. You get what you pay for.

>There NEVER was a CB license.
> The early days of CB required
> only the mailing in of a form. No test at all.
> Since you view that
> early CB environment in a positve light simply because it required
> a form license application, then we have nothing to fear if code
> goes away since the ham license requires passing a test which
> the CBer never did at all.

true. he [pro-coder] doesn't know what he is talking about.
that's the problem for ham radio today.

>>If you invest your
>>time and a little effort in learning all that is required for ham
>>radio, you will get everything that is there to be had. If you don't,
>>buy a CB radio and stay out of the ham bands.

>So what bright comment to you have for those of us that have
>already done it and are still lobbying for an end to CW.

yeah most of us are coders, but pro-coders don't realize it.

they don't know who they are talking to. that's the problem in ham radio.

>Bill Sohl K2UNK (Advanced)

>Visit the No-Code WEB site: http://www.nocode.org

great web site.

I suggest this web site for all people out there who are crying of keeping the CW.

There was a piece on the news last night (CFCF tv) about the store in
Quebec, Radio Progressive. It mentioned that while business had not
been great, the final reason for closing is new language laws coming into
effect on January 1st.

Apparently with the new year, retailers are expected to ensure that
instructions that come with goods being sold be in French as well as
English. I do recall reading something about this a few months ago,
and there was concern about it affecting business.

The manufacturers of ham equipment are not interested in providing
the manuals in French, for after all it is a very small percentage of
the market. Radio Progressive, according to the piece, cannot afford
to do the translations themselves. So it is closing.

THe new law will presumably impact on the other places in Quebec selling
ham equipment (and a lot of other items), such as the place in Trois
Riviere and any place in Quebec City selling the stuff. Unless they have a
more general business to sustain the ham part, and can afford to translate
the manuals.

I talked with some people in Radio Progressive and one of the reasons
why they are closing is because they don't get many customers as they
used to 5 years ago.

>Apparently with the new year, retailers are expected to ensure that

I know one store in Vancouver that cut down the number of employees by
70% two years ago at ham store.

Your facts are right, but your conclusions are faulty.

220 spectrum was lost due to lack of use.

There is no lack of ham operators for populating underused bands.

We had (conservatively) 500K amateur radio operators in the late 80's.
If even half of those operators worked VHF on 2mtrs and 220mhz, those
bands would be extremely crowded.

Lack of bodies wasn't/isn't the problem. Lack of use is.

Does anyone have (or know where I can get) the voice synth module for the ICOM IC-281H 2 meter mobile radio? R&L electronics has it for 60 bucks, but I don't want to pay that much.

PS. I also need a diagram of the mods for that radio to find the correct jumper and diode.

Thank You

I would like to see the loading coil for the whip on such a rig! Seems like a fine line is being walked between small size and efficiency. I commend your friend on his ingenuity and go-for-it-ness. I would not have attempted much over a watt, I think, on 160 with a whip antenna.

QRP on this band is really operating on the fringe. It can be tough to work this band using less than 100W unless conditions are pretty decent. There is a LOT of QRN down there. Course, that didn't stop all those kids back in the forties using their one-tubers from making contacts!

There was a Japanese company, High-Power I think the name was, that made a 20 meter HT. I believe it had SSB and CW, and it was reviewed in one of the ham rags about 5 years ago. It was taken off the US market almost as soon as it got here, but I guess it could be ordered from Japan if one doesn't mind the paperwork. I seem to remember the reviewers commenting on how moch better the rig performed with a proper dipole rather than the whip. (SURPRISE!!!!!) I know this is not your band of interest.. nevertheless this is an intriguing little unit.

Just more junk legislation, crafted by "feel-good", "do-gooder" politicians, trying to get votes from brain-dead citizens who feel they need to be protected from themselves.

I don't give it much chance of passage, though, given the cellular lobby's stronghold on Congress. If they can shove a piece of legislation like the ECPA down our throats, I'd imagine they'll be successful in nipping this one in the bud.

>
> - Chris, KD4DTS

Chris, this doesn't seem like the most sensible way to attack this problem. Why not just build a squaring loop and recover clock with it. (A squaring loop can be implemented with a few gates.) This can then strobe a status line on any available port (serial or parallel) to tell the program to grab the current output of the slicer on another status line as a valid bit. This way nothing needs to run faster than 3600 bps, and a large chunk of the Trunker code can be eliminated. In other words, if you're going to throw hardware at the problem, then use hardware to solve the real task directly rather than as a kludge to let a software emulation of that hardware work around Windoze limitations.

6504. FS **NEW** KENWOOD VS-2 VOICE SYNTHESIZER

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-31 00:00:00 UTC
From: mrusso@hoflink.com
Message-ID: <34aabdf3.10080824@news.hoflink.com>
Source record: 183010
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap

Hello to all,
I have a Kenwood VS-2 voice unit NEW in the BOX (unused).
I sold my TS-450S before the VS-2 came in the mail. According to the HRO fall/winter catalog the VS-2 will work with the TS-690S, TS-850S, TS-950SDX and of course the TS-450S.
The VS-2 sells in the catalogs for $69.95. I am asking $45.00
The VS-2 comes with the box, instruction manual and the VS-2 still in the factory sealed bag.
I prefer a money order. Add $3.00 for US Post Office Priority mail (2-3 day delivery).

Please e-mail me direct at:
mrusso@hoflink.com

Happy New Year

Thanks, Mark N2FLF

Try alt . radio. pirate. There are many people there that are expert on the subject of building radio transmitters etc. You may find good links to companies that sell KITS, etc. Kit transmitters in the FM broadcast band (88 to 108 mhz) are very popular.

Notes
=====

The abbreviations used in the propagation mode column are:

Tropo Tropospheric
Aurora Auroral
Spor-E Sporadic E
Meteor Meteor scatter
EME Earth-Moon-Earth (Moonbounce)
F2 F2 propagation
TEP Trans-Equatorial Propagation
Au-Es Auroral sporadic E
Iono Ionospheric scatter
FAI Field Aligned Irregularities
Rainsc Rain scatter

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code,
is available can be downloaded as a 225k Word 6 file from the Internet at
http://www.kirsta.demon.co.uk/dxrechow.doc.

Propagation modes are those reported by the stations concerned.
However, it can sometimes be very difficult to distinguish between
propagation modes. This is especially so on 50 MHz, where mixed-mode
QSOs are common, and to a lesser extent it applies on 144 MHz. The
propagation information should be read with this in mind.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.
5. Corner of locator square nearest to QSO partner

Calculated distances may change if better information on station
location becomes available.

If you have any information on a possible record or exceptionally long
distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX
record co-ordinator:

John Morris, GM4ANB,

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

http://www.kirsta.demon.co.uk/records.htm

>But I guess,
>what really caught my ear. Someone was talking about 10 meter,

"10" is a plural adjective, so the noun following, "meter" should also be plural, "10 meterS." This is becomming a common turn of phrase, as mant new hams who have had a "CB" for years try to use the same kind of referral to their "2 meter." >They said, "When you get your No-Code Tech Lic.. That you could
>operate voice on the 10 meter band-without having to take the code
>test". Is this true?
>
>

No. You need the Tech-Plus (5 wpm Morse) to operate in the Novice Inhancement sub-section of 10 meterS.

Hey Thread-Killer,

I don't think you get much of what people say whether it is posted here
or directed toward you. I am not going to get into a pissing contest
with you over another person's age. Late 40's is old? You will
realize more as you grow older and hopefully wiser!

Casey

They're not "mostly extras", but--
More to the point, what would those bands be now without the aforesaid filter?
There are always individuals who push any envelope in the absence of effective guidance/enforcement. License class does not eliminate those few in the absence of threat of loss of that licensse-remember the days when such language would bring down the wrath of the FCC-, but any listening session on 11 meters reveals the same phenomona upscaled. Nothing short of direct enforcement of rules regarding language use on the air -if any survive- will eliminate this sort of garbage, unfortunately. Color it a part of the Culture of America Today-Sad to say.

73, Dick W0EX

While I haven't written a program to decode radio data from a scanner, I have written a program which controls a scanner serially. You lost me on why the timing is a factor. In vb, a communications control (MSComm16.ocx or MSComm32.ocx) is used to send and receive data thru the serial ports. If you need to read data at a certain baud rate, say 3600, you simply set the Settings property to the proper baud and parity settings (i.e. 3600,1,7,2, which I think is the right setting for Motorola control channels). You then just watch the InBufferCount property to see if you have any data waiting.

The control takes over all the timing issues itself, at least for what I have used it for - programming and controlling the BC895xlt at 9600,n,8,1. One thing I do know, if you want to use VB for this, you will be stuck using the Comm control, which may not have the "umph" you need to get the job done. I searched thru the windows api for a better way and did not find it.

My next "mission" is an MDT decoder for windows, but I'm not sure if such a beast is possible, let alone feasible to produce. Time will tell.

6515. What's the best CW Memory Keyer ?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-31 00:00:00 UTC
From: hisa@ibm.net

Happy New Year !

I'm going to buy a CW Memory Keyer soon and wonder what's the best model
in the market.

Please let me know.
Thank you,
Hisa

Whether this specific information is true or not, Tauzin's staff has continued from time to time in off the record statements to indicate that acute mismanagement, particularly in CIB, will cause the agency's downfall and ultimate elimination.

Tauzin has been quoted in some trade journals as saying that all remaining field offices will be closed, followed by a reduction of up 75 % in the headquarters staff.

Grossly inflated salaries and no valid mission for the CIB are additional reasons whey the agency's days are numbered.

My advice to agency employees is to prepare your resume, no matter how pathetic it looks after you've spent so many years doing nothing for extravagant salaries.

KEEP AN EYE ON TYPHOON TAUZIN, he's coming your way FCC!

Last year I went to Dayton with no advance res. or even any idea
of where to look and only had to go to 3 or 4 motels before I found
a room at the best western out just north of the air force base.

I forget what suburb of Dayton this is but call best western or I'll
bet they even have a web page.

If you do buy Radio Shak, be sure to buy the service contract. I bought an HT 3 years ago, went back for repair six times, then a month before the service contract ran out, they gave me a new rig, but wouldn't let me renew the serv. contract. Also went thru two of their spkr mikes. The real joke is I probably didn't use the stuff more than once a week, at the most. About the same time I had bought one of their 30w amps, it sizzled out two months later, they did fix that for free. Have had real good luck with their DSP. Must admit their service is great!

Beware when you buy! I surely won't waste my time or money on their stuff again!

If you have no luck with a commercially-available unit, they shouldn't be too hard to make. A friend of mine has a 8 watt 160m HT which is a direct conversion/double sideband transceiver. It worked quite well provided you didn't come into contact with the h/held's antenna, which could give a nasty zap!

Then why is the failure rate about 50% on average for the
many test elements given? ....according to W5YI data

> If you want to hear
>what ham radio would be without the code, flip through the 40 CB
>channels. A bunch of brain-dead dipshits with a pathetic lives and
>foul language wasting frequencies.

And not one of them even had to fill out a form to
get on CB. CB is NO license at all. If code was the true
protector of the amateur bands as you suggest then why isn't
VHF/UHF anything like CB. Face it, most of the ful mouthed
CB is not DX oriented, but is usually just kids and lids
locally.

> If I had my way, the tests would
>be much more technical without the question pools being public.

Many of us suport more technical licenses and, in fact, the
Novice and Technician question pools have been increased
by 50% as of 7/1/97. As to public question pools... that's the
province of federal law, not an FCC decision.

> Also, there would be NO no-code tech licenses.

Well that isn't going to happen. More likly will be the
end of all CW testing in the near (several years anyway)
future.

> If you have a strong enough
>desire to truly be an amateur radio operator, then study what is
>required.

So you are saying it is wrong to press for change because
that's not what you want.

>You make the comment about CB here to stay with no license
>requirements. If they still existed, CB would still be popular, but
>with a lot less dickheads jamming frequencies, running 1000 watts with
>illegal linears, etc. You get what you pay for.

There NEVER was a CB license. The early days of CB required
only the mailing in of a form. No test at all. Since you view that

early CB environment in a positve light simply because it required
a form license application, then we have nothing to fear if code
goes away since the ham license requires passing a test which
the CBer never did at all.

>If you invest your
>time and a little effort in learning all that is required for ham
>radio, you will get everything that is there to be had. If you don't,
>buy a CB radio and stay out of the ham bands.

So what bright comment to you have for those of us that have
already done it and are still lobbying for an end to CW.

Yes, I've been frustrated by the lack of applications for Windows along these lines. After your explanation, at least I understand why it's so much easier to write them for Messy-DOS. Still, it would be nice to get computer-controlled scanning into the 1990s before the turn of the century. :-)

From: chia@news.utk.edu
Message-ID: <68ckjk$l7m$1@gaia.ns.utk.edu>
Source record: 183158

And what is your basis for this statement...? The fact that YOU
think that CW is old, or outdated. Hmmm, let's just buy a cell phone and
never persue any other comunications needs. And then when and if the day came
that ALL the Cell towers were down and the ONLY comunication that would go
the distance is CW maybe you will thank some operator that knows CW. See
voice can NEVER do what CW does without a LOT more power. Btu I will no
longer argue with "the CB Rambo".

6543. But wait...I forgot! QRP!

Newsgroup: rec.radio.amateur.misc

From: chia@news.utk.edu
Message-ID: <68ckuh$l7m$2@gaia.ns.utk.edu>
Source record: 183159

Oh yeah HERE is another GREAT example that I and a few friends look forward ro doing as soon as we learn CW. The thought of comunication for hundreds and even THOUSANDS of miles on nothing more than 1/8th to 1/2 watt. Hmmm, but wait CB Rambo probably knows how to "tweak" or "turn up" that CB you have to get more out of it. Yeah... that will work. "Awww the FCC doesn't care..." just a little cutting of the modulation will get you to bleed over on ALL the other channels and then your voice will splatter and sound terrible, but you will have that "peaked" radio. Yeah whatever...

I thought about going and getting my ham ticket, but I kept pushing it
off, I have been saying this now for almost 5 years now. But I guess,
what really caught my ear. Someone was talking about 10 meter,
What they were saying was " that there was change(s) in effect"
They said, "When you get your No-Code Tech Lic.. That you could
operate voice on the 10 meter band-without having to take the code
test". Is this true?

>voice can NEVER do what CW does without a LOT more power. Btu I will no
>longer argue with "the CB Rambo".

If cell phone towers are down, a logical assumption would be that a major
disaster has struck. This is what happened during the Oklahoma City bombing.

CB Rambo will probably find the best place to go looting.

Greetings
Hi Jim
May I offer a suggestion?
From your note, I gather you are a no code tech licencee. I am a
Canadian so I am not that familiar with the American licencing system,
However, I do believe you have a novice licence which gives hf
priveledges on selected segments of hf and the cw speed is 5 wpm. May
I suggest that you aim for the novice licence. Using the novice
priveledges you can gain access to hf cw and gain cw practice which
should make increasing you cw speed, to getting the higher
priveledges, much easier.

Larry ve3fxq

When I was learning the code, I found increasing my cw speed to be
very frustrating. It wasn't until I had my Canadian amateur licence,
10 wpm, and was able to make cw contacts, that I found my cw speed
slowly increasing.

It may take some effort but, putting the mike away for some time may
be the best way to get your cw speed up.

Purhaps, I am not the one to answer your question, I am not a model
airplane builder, but I might be able to offer some advice.
I assume you are talking about the larger, 3 foot wingspan, planes.
Receivers and transmitters are not that easy to build from scratch.
I would suggest that you visit the model airplane, hobby stores, and
investigate what information there is on the internets.
I think magazines like Popular Electronics may also be a source of
guidance.
I terms of using amateur radio, you would need a licence, and that is
a lot of work simple to operator a model aircraft.
I would keep you radio off 27 mhz and 48 mhz as there is already lots
of rf stuff on them.
Visit your local book store and hobby store and the internet before
investing any real money.

>Your becoming more bizarre with each and every post, what does no code on HF
>have
>to do with loosing a section of a VHF band?

The FCC warned hams repeatedly that their refusal to accept a highly restricted codeless license (then proposed as the "Communicator" class) could well result in a loss of spectrum. Check the facts.

>And why the hell would the FCC
>care if
>the ARRL endorsed code free licenses or not?

Because the ARRL is the self-proclaimed "voice of amateur radio" and represents itself to the FCC as such.

>lost the spectrum anyway

Wrong. You lost the spectrum (40% of 220) in 1989. The no-code license did not become a reality until 1991. Again, I suggest you check your facts.

"Where's that big 'ol CB RAMBO??"

Looks like Little Timmy better learn how to follow a thread properly. I did not write the second "quote" that you erroneously attributed to me.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

There are a number of items possibly wrong.
1. Check the voltages to the DG 1 unit
2. Check the plugs for dirt-clean anyway.
3. Does the VFO operate properly? If not that contributes.

Do you have any response on the tube?
Mike

...some really good puns that were snipped for brevity...

Here's another with absolutely nothing to do with ham radio.

How do you catch a polar bear?

Cut a hole in the ice about 3' in diameter. Place a ring of
green peas around the hole. When the polar bear comes out
to take a pea, kick him in the ice hole.
;-]...

6559. What does 55 mean?

Newsgroup: rec.radio.amateur.misc

Sometimes when having a CW QSO with german hams i get 73 and the code 55 at the end of the conversation.

I simply want to know what that means.
I've asked several german hams, even in german; Was bedeutes 55?, byt I have got no answer so far. I've also searched the net for lists of abbrevs, mut the result is nil.

Does anyone know and wish to explain 55 to me?

On this same note, I'm thinking of buying an Icom T2A, but a friend begged me to check out the Radio Shack 2M rig first (HT). It seems more expensive, bigger and with less features. Plus Radio Shack always dinks you with no accessories. The accessories usually have to be boughten later or seperately. Any ideas or thoughts?

Thanks,

John

Larry,
Loved your post... but I think he meant "plans" not "planes". His English is marginal...

:Purhaps, I am not the one to answer your question, I am not a model
:airplane builder, but I might be able to offer some advice.
:I assume you are talking about the larger, 3 foot wingspan, planes.
:Receivers and transmitters are not that easy to build from scratch.
:I would suggest that you visit the model airplane, hobby stores, and
:investigate what information there is on the internets.
:I think magazines like Popular Electronics may also be a source of
:guidance.
:I terms of using amateur radio, you would need a licence, and that is
:a lot of work simple to operator a model aircraft.
:I would keep you radio off 27 mhz and 48 mhz as there is already lots
:of rf stuff on them.
:Visit your local book store and hobby store and the internet before
:investing any real money.

Other than making idiots stop their idiotic behavior through ignoring
or embarrassing them, we have no more jurisdiction that anyone else
in the US regarding "policing" of the airwaves.

Sure, we're self-policing in that we listen and take good notes
and keep excellent records, and when we hear violations we're fine
reporting them, BUT WHEN SOMEONE CAUSES MALICIOUS INTERFERENCE,
and you can't make them stop through the use of legitimate reasons,
ARE YOU GOING TO THROW A BRICK THROUGH A WINDOW? CUT COAX?

In order to stop a lawbreaker, we should ourselves break the law?

I don't think this is what the FCC had in mind when they called
hams "SELF-POLICING."

So basically, look at 75m phone and make some suggestions as to
where to start.

How do we MAKE the FCC listen to us?

I'm all ears.
